| Called ROM 1 Subroutines | 18 |
| RESTART ROUTINES — PART 1 | 20 |
| RST \$00 — Reset Machine | 20 |
| RST \$10 — Print A Character | 20 |
| RST \$18 — Collect A Character | 20 |
| RST \$20 — Collect Next Character | 20 |
| RST \$28 — Call Routine in ROM 1 | 21 |
| MASKABLE INTERRUPT ROUTINE | 21 |
| ERROR HANDLER ROUTINES — PART 1 | 21 |
| 128K Error Routine | 21 |
| RESTART ROUTINES — PART 2 | 21 |
| Call ROM 1 Routine (RST \$28 Continuation) | 21 |
| RAM ROUTINES | 22 |
| Swap to Other ROM (copied to \$5B00) | 22 |
| Return to Other ROM Routine (copied to \$5B14) | 22 |
| Error Handler Routine (copied to \$5B1D) | 23 |
| 'P' Channel Input Routine (copied to \$5B2F) | 23 |
| 'P' Channel Output Routine (copied to \$5B34) | 23 |
| 'P' Channel Exit Routine (copied to \$5B4A) | 23 |
| ERROR HANDLER ROUTINES — PART 2 | 24 |
| Call Subroutine | 24 |
| INITIALISATION ROUTINES — PART 1 | 24 |
| Reset Routine (RST \$00 Continuation, Part 1) | 24 |
| ROUTINE VECTOR TABLE | 24 |
| INITIALISATION ROUTINES — PART 2 | 25 |
| Fatal RAM Error | 25 |
| Reset Routine (RST \$00 Continuation, Part 2) | 25 |
| COMMAND EXECUTION ROUTINES — PART 1 | 27 |
| Execute Command Line | 27 |
| Return from BASIC Line Syntax Check | 28 |
| Parse a BASIC Line with No Line Number | 28 |
| ERROR HANDLER ROUTINES — PART 3 | 29 |
| Error Handler Routine | 29 |
| Error Handler Routine When Parsing BASIC Line | 31 |
| COMMAND EXECUTION ROUTINES — PART 2 | 31 |
| Parse a BASIC Line with a Line Number | 31 |
| ERROR HANDLER ROUTINES — PART 4 | 32 |
| New Error Message Vector Table | 32 |
| New Error Message Table | 33 |

| | |
|---|----|
| Print Message | 33 |
| INITIALISATION ROUTINES — PART 3 | 34 |
| The 'Initial Channel Information' | 34 |
| The 'Initial Stream Data' | 34 |
| ERROR HANDLER ROUTINES — PART 5 | 34 |
| Produce Error Report | 34 |
| Check for BREAK into Program | 35 |
| RS232 PRINTER ROUTINES | 35 |
| RS232 Channel Handler Routines | 35 |
| FORMAT Routine | 36 |
| Baud Rate Table | 38 |
| RS232 Input Routine | 38 |
| Read Byte from RS232 Port | 38 |
| RS232 Output Routine | 41 |
| Write Byte to RS232 Port | 44 |
| COPY Command Routine | 45 |
| Output Half Row | 45 |
| Output Nibble of Pixels | 46 |
| Output Characters from Table | 46 |
| Test Whether Pixel (B,C) is Set | 47 |
| EPSON Printer Control Code Tables | 47 |
| PLAY COMMAND ROUTINES | 47 |
| Command Data Block Format | 47 |
| Channel Data Block Format | 48 |
| Calculate Timing Loop Counter « RAM Routine » | 50 |
| Test BREAK Key | 50 |
| Select Channel Data Block Duration Pointers | 50 |
| Select Channel Data Block Pointers | 51 |
| Get Channel Data Block Address for Current String | 51 |
| Next Channel Data Pointer | 51 |
| PLAY Command (Continuation) | 51 |
| PLAY Command Character Table | 52 |
| Get Play Character | 52 |
| Get Next Note in Semitones | 52 |
| Get Numeric Value from Play String | 53 |
| Multiply DE by 10 | 54 |
| Find Next Note from Channel String | 54 |
| Play Command '!' (Comment) | 54 |
| Play Command 'O' (Octave) | 54 |
| Play Command 'N' (Separator) | 55 |
| Play Command '(' (Start of Repeat) | 55 |
| Play Command ')' (End of Repeat) | 55 |
| Get Address of Bracket Pointer Store | 56 |
| Play Command 'T' (Tempo) | 57 |
| Tempo Command Return | 57 |
| Play Command 'M' (Mixer) | 58 |
| Play Command 'V' (Volume) | 58 |
| Play Command 'U' (Use Volume Effect) | 58 |
| Play command 'W' (Volume Effect Specifier) | 59 |
| Play Command 'X' (Volume Effect Duration) | 59 |
| Play Command 'Y' (MIDI Channel) | 59 |
| Play Command 'Z' (MIDI Programming Code) | 60 |
| Play Command 'H' (Stop) | 60 |
| Play Commands 'a'..'g', 'A'..'G', '1'..'12', '&' and '_' | 60 |
| End of String Found | 62 |
| Point to Duration Length within Channel Data Block | 62 |
| Store Entry in Command Data Block's Channel Duration Length Pointer Table | 62 |
| PLAY Command Jump Table | 63 |
| Envelope Waveform Lookup Table | 63 |
| Identify Command Character | 63 |
| Semitones Table | 63 |
| Find Note Duration Length | 64 |
| Note Duration Table | 64 |
| Is Numeric Digit? | 64 |
| Play a Note On a Sound Chip Channel | 64 |
| Set Sound Generator Register | 65 |
| Read Sound Generator Register | 66 |
| Turn Off All Sound | 66 |
| Get Previous Character from Play String | 66 |
| Get Current Character from Play String | 67 |

SPANISH SPECTRUM +2 ROM 0 DISASSEMBLY

| | |
|---|-----|
| Produce Play Error Reports | 67 |
| Play Note on Each Channel | 68 |
| Wait Note Duration | 68 |
| Find Smallest Duration Length | 69 |
| Play a Note on Each Channel and Update Channel Duration Lengths | 69 |
| Note Lookup Table | 71 |
| Play Note on MIDI Channel | 73 |
| Turn MIDI Channel Off | 74 |
| Send Byte to MIDI Device | 74 |
| CASSETTE / RAM DISK COMMAND ROUTINES — PART 1 | 75 |
| SAVE Routine | 75 |
| LOAD Routine | 75 |

NOTES

Release Date

4th August 2017

This file was automatically derived from the Spectrum 128 ROM 0 disassembly, using a conversion utility created by Paul Farrow.

Any enhancements or corrections should only be made to the Spectrum 128 ROM 0 disassembly and then the utility used to automatically regenerate the Spanish Spectrum +2 listing.

Disassembly Contributors

Matthew Wilson (www.matthew-wilson.net/spectrum/rom/)

Andrew Owen (cheveron-AT-gmail.com)

Geoff Wearmouth (gwearmouth-AT-hotmail.com)

Rui Tunes

Paul Farrow (www.fruitcake.plus.com)

Markers

The following markers appear throughout the disassembly:

[...] = Indicates a comment about the code.

???? = Information to be determined.

For bugs, the following marker format is used:

[BUG - xxxx. Credit: yyyy] = Indicates a confirmed bug, with a description 'xxxx' of it and the discoverer 'yyyy'.

[BUG? - xxxx. Credit: yyyy] = Indicates a suspected bug, with a description 'xxxx' of it and the discoverer 'yyyy'.

Since many of the Spectrum 128 ROM routines were re-used in the Spectrum +2 and +3, where a bug was originally identified in the Spectrum +2 or +3 the discoverer is acknowledged along with who located the corresponding bug in the Spectrum 128.

For every bug identified, an example fix is provided and the author acknowledged. Some of these fixes can be made directly within the routines affected since they do not increase the length of those routines. Others require the insertion of extra instructions and hence these cannot be completely fitted within the routines affected. Instead a jump must be made to a patch routine located within a spare area of the ROM.

Fortunately there is 0.5K of unused routines located at \$2355-\$2555 (ROM 0) which are remnants of the original Spanish 128, and another unused routine located at \$3F7C-\$3F87 (ROM 0). This is sufficient space to implement all of the bug fixes suggested.

REFERENCE INFORMATION — PART 1

128 BASIC Mode Limitations

There are a number of limitations when using 128 BASIC mode, some of which are not present when using the equivalent 48 BASIC mode operations. These are more design decisions than bugs.

- The RAM disk VERIFY command does not verify but simply performs a LOAD.
- The renumber facility will not renumber line numbers that are defined as an expression, e.g. GO TO VAL "10".
- The printer output routine cannot handle binary data and hence EPSON printer ESC codes cannot be sent.
- The Editor has the following limitations:
- Variables cannot have the same name as a keyword. This only applies when entering a program and not when one is loaded in.
- Line number 0 is not supported and will not list properly. It is not possible to directly insert such a line, not even in 48 BASIC mode, and so line number 0 is not officially supported.
- There is a practical limitation on the size of lines that can be entered. It is limited to 20 indented rows, which is the size of the editing buffers. Typed lines greater than 20 rows get inserted into the BASIC program, but only the first 20 rows are shown on screen. Editing such a line causes it to be truncated to 20 rows. There is no warning when the 20 row limit is exceeded.
- It is not possible to directly enter embedded control codes, or to correctly edit loaded in programs that contain them. Loaded programs that contain them will run correctly so long as the lines are not edited.
- It is not possible to embed the string of characters ">=", "<=" or "<>" into a string or REM statement without them being tokenized (this is perhaps more an oversight than a design decision).
- In 48 BASIC mode if the line '10 REM abc: PRINT xyz' is typed then the word PRINT is stored as a new keyword since the colon (arguably incorrectly) reverts to 'K' mode. In 128 BASIC mode, typing the same line stores each letter as a separate character.

Timing Information

Clock Speed = 3.54690 MHz (48K Spectrum clock speed was 3.50000 MHz) Scan line = 228 T-states (48K Spectrum was 224 T-states).

TV scan lines = 311 total, 63 above picture (48K Spectrum had 312 total, 64 above picture).

I/O Details

Memory Paging

Memory paging is controlled by I/O port:

\$7FFD (Out) - Bits 0-2: RAM bank (0-7) to page into memory map at \$C000.

Bit 3 : 0=SCREEN 0 (normal display file in bank 5), 1=SCREEN 1 (shadow display file in bank 7).

Bit 4 : 0=ROM 0 (128K Editor), 1=ROM 1 (48K BASIC).

Bit 5 : 1=Disable further output to this port until a hard reset occurs.

Bit 6-7 : Not used (always write 0).

The Editor ROM (ROM 0) always places a copy of the last value written to port \$7FFD into new system variable BANK_M (\$5B5C).

Memory Map

ROM 0 or 1 resides at \$0000-\$3FFF.

RAM bank 5 resides at \$4000-\$7FFF always.

RAM bank 2 resides at \$8000-\$BFFF always.

Any RAM bank may reside at \$C000-\$FFFF.

Shadow Display File

The shadow screen may be active even when not paged into the memory map.

Contended Memory

Physical RAM banks 1, 3, 5 and 7 are contended with the ULA.

Logical RAM Banks

Throughout ROM 0, memory banks are accessed using a logical numbering scheme, which maps to physical RAM banks as follows:

| Logical Bank | Physical Bank |
|--------------|---------------|
| \$00 | \$01 |
| \$01 | \$03 |
| \$02 | \$04 |
| \$03 | \$06 |
| \$04 | \$07 |
| \$05 | \$00 |

This scheme makes the RAM disk code simpler than having to deal directly with physical RAM bank numbers.

AY-3-8912 Sound Generator

The AY-3-8912 sound generator is controlled by two I/O ports: \$FFFD (Out) - Select a register 0-14.

\$FFFD (In) - Read from the selected register.

\$BFFD (In/Out) - Write to the selected register. The status of the register can also be read back.

The AY-3-8912 I/O port A is used to drive the RS232 and Keypad sockets.

| Register | Function | Range |
|----------|--------------------------|---|
| 0 | Channel A fine pitch | 8-bit (0-255) |
| 1 | Channel A course pitch | 4-bit (0-15) |
| 2 | Channel B fine pitch | 8-bit (0-255) |
| 3 | Channel B course pitch | 4-bit (0-15) |
| 4 | Channel C fine pitch | 8-bit (0-255) |
| 5 | Channel C course pitch | 4-bit (0-15) |
| 6 | Noise pitch | 5-bit (0-31) |
| 7 | Mixer | 8-bit (see end of file for description) |
| 8 | Channel A volume | 4-bit (0-15, see end of file for description) |
| 9 | Channel B volume | 4-bit (0-15, see end of file for description) |
| 10 | Channel C volume | 4-bit (0-15, see end of file for description) |
| 11 | Envelope fine duration | 8-bit (0-255) |
| 12 | Envelope course duration | 8-bit (0-255) |
| 13 | Envelope shape | 4-bit (0-15) |
| 14 | I/O port A | 8-bit (0-255) |

See the end of this document for description on the sound generator registers.

I/O Port A (AY-3-8912 Register 14)

This controls the RS232 and Keypad sockets.

Select the port via a write to port \$FFFD with 14, then read via port \$FFFD and write via port \$BFFD. The state of port \$BFFD can also be read back.

Bit 0: KEYPAD CTS (out) - 0=Spectrum ready to receive, 1=Busy

Bit 1: KEYPAD RXD (out) - 0=Transmit high bit, 1=Transmit low bit

Bit 2: RS232 CTS (out) - 0=Spectrum ready to receive, 1=Busy

Bit 3: RS232 RXD (out) - 0=Transmit high bit, 1=Transmit low bit

Bit 4: KEYPAD DTR (in) - 0=Keypad ready for data, 1=Busy

Bit 5: KEYPAD TXD (in) - 0=Receive high bit, 1=Receive low bit

Bit 6: RS232 DTR (in) - 0=Device ready for data, 1=Busy

Bit 7: RS232 TXD (in) - 0=Receive high bit, 1=Receive low bit

See the end of this document for the pinouts for the RS232 and KEYPAD sockets.

Standard I/O Ports

See the end of this document for descriptions of the standard Spectrum I/O ports.

Error Report Codes

Standard Error Report Codes

See the end of this document for descriptions of the standard error report codes.

New Error Report Codes

| | |
|----------------------------------|--|
| a — MERGE error | MERGE! would not execute for some reason - either size or file type wrong. |
| b — Wrong file type | A file of an inappropriate type was specified during RAM disk operation, for instance a CODE file in LOAD!"name". |
| c — CODE error | The size of the file would lead to an overrun of the top of memory. |
| d — Too many brackets | Too many brackets around a repeated phrase in one of the arguments. |
| e — File already exists | The file name specified has already been used. |
| f — Invalid name | The file name specified is empty or above 10 characters in length. |
| g — File does not exist | [Never used by the ROM]. |
| h — File does not exist | The specified file could not be found. |
| i — Invalid device | The device name following the FORMAT command does not exist or correspond to a physical device. |
| j — Invalid baud rate | The baud rate for the RS232 was set to 0. |
| k — Invalid note name | PLAY came across a note or command it didn't recognise, or a command which was in lower case. |
| l — Number too big | A parameter for a command is an order of magnitude too big. |
| m — Note out of range | A series of sharps or flats has taken a note beyond the range of the sound chip. |
| n — Out of range | A parameter for a command is too big or too small. If the error is very large, error L results. |
| o — Too many tied notes | An attempt was made to tie too many notes together. |
| p — © 1986 Sinclair Research Ltd | This error is given when too many PLAY channel strings are specified. Up to 8 PLAY channel strings are supported by MIDI devices such as synthesisers, drum machines or sequencers. Note that a PLAY command with more than 8 strings cannot be entered directly from the Editor. The Spanish 128 produces "p Bad parameter" for this error. It could be that the intention was to save memory by using the existing error message of "Q Parameter error" but the change of report code byte was overlooked. |

System Variables

New System Variables

These are held in the old ZX Printer buffer at \$5B00-\$5BFF.

Note that some of these names conflict with the system variables used by the ZX Interface 1.

| | | | |
|---------|------------|----|--|
| SWAP | EQU \$5B00 | 20 | Swap paging subroutine. |
| YOUNGER | EQU \$5B14 | 9 | Return paging subroutine. |
| ONERR | EQU \$5B1D | 18 | Error handler paging subroutine. |
| PIN | EQU \$5B2F | 5 | RS232 input pre-routine. |
| POUT | EQU \$5B34 | 22 | RS232 token output pre-routine. This can be patched to bypass the control code filter. |
| POUT2 | EQU \$5B4A | 14 | RS232 character output pre-routine. |
| TARGET | EQU \$5B58 | 2 | Address of subroutine to call in ROM 1. |
| RETADDR | EQU \$5B5A | 2 | Return address in ROM 0. |

SPANISH SPECTRUM +2 ROM o DISASSEMBLY

| | | | |
|---------|------------|----|---|
| BANK_M | EQU \$5B5C | 1 | Copy of last byte output to I/O port \$7FFD. |
| RAMRST | EQU \$5B5D | 1 | Stores instruction RST \$08 and used to produce a standard ROM error. |
| RAMERR | EQU \$5B5E | 1 | Error number for use by RST \$08 held in RAMRST. |
| BAUD | EQU \$5B5F | 2 | Baud rate timing constant for RS232 socket. Default value of 11. [Name clash with ZX Interface 1 system variable at \$5CC3] |
| SERFL | EQU \$5B61 | 2 | Second character received flag: Bit 0 : 1=Character in buffer. Bits 1-7: Not used (always hold 0). Received Character. |
| | \$5B62 | | |
| COL | EQU \$5B63 | 1 | Current column from 1 to WIDTH. |
| WIDTH | EQU \$5B64 | 1 | Paper column width. Default value of 80. [Name clash with ZX Interface 1 Edition 2 system variable at \$5CB1] |
| TVPARS | EQU \$5B65 | 1 | Number of inline parameters expected by RS232 (e.g. 2 for AT). |
| FLAGS3 | EQU \$5B66 | 1 | Flags: [Name clashes with the ZX Interface 1 system variable at \$5CB6] Bit 0: 1=BASIC/Calculator mode, 0=Editor/Menu mode. Bit 1: 1=Auto-run loaded BASIC program. [Set but never tested by the ROM] Bit 2: 1=Editing RAM disk catalogue. Bit 3: 1=Using RAM disk commands, 0=Using cassette commands. Bit 4: 1=Indicate LOAD. Bit 5: 1=Indicate SAVE. Bit 6; 1=Indicate MERGE. Bit 7: 1=Indicate VERIFY. |
| N_STR1 | EQU \$5B67 | 10 | Used by RAM disk to store a filename. [Name clash with ZX Interface 1 system variable at \$5CDA] Used by the renumber routine to store the address of the BASIC line being examined. |
| HD_00 | EQU \$5B71 | 1 | Used by RAM disk to store file header information (see RAM disk Catalogue section below for details). [Name clash with ZX Interface 1 system variable at \$5CE6] Used as column pixel counter in COPY routine. Used by FORMAT command to store specified baud rate. Used by renumber routine to store the number of digits in a pre-renumbered line number reference. [Name clash with ZX Interface 1 system variable at \$5CE7] |
| HD_0B | EQU \$5B72 | 2 | Used by RAM disk to store header info - length of block. Used as half row counter in COPY routine. Used by renumber routine to generate ASCII representation of a new line number. |
| HD_0D | EQU \$5B74 | 2 | Used by RAM disk to store file header information (see RAM disk Catalogue section below for details). [Name clash with ZX Interface 1 system variable at \$5CE9] |
| HD_0F | EQU \$5B76 | 2 | Used by RAM disk to store file header information (see RAM disk Catalogue section below for details). [Name clash with ZX Interface 1 system variable at \$5CEB] Used by renumber routine to store the address of a referenced BASIC line. |
| HD_11 | EQU \$5B78 | 2 | Used by RAM disk to store file header information (see RAM disk Catalogue section below for details). [Name clash with ZX Interface 1 system variable at \$5CED] Used by renumber routine to store existing VARS address/current address within a line. |
| SC_00 | EQU \$5B7A | 1 | Used by RAM disk to store alternate file header information (see RAM disk Catalogue section below for details). |
| SC_0B | EQU \$5B7B | 2 | Used by RAM disk to store alternate file header information (see RAM disk Catalogue section below for details). |
| SC_0D | EQU \$5B7D | 2 | Used by RAM disk to store alternate file header information (see RAM disk Catalogue section below for details). |
| SC_0F | EQU \$5B7F | 2 | Used by RAM disk to store alternate file header information (see RAM disk Catalogue section below for details). |
| OLDSP | EQU \$5B81 | 2 | Stores old stack pointer when TSTACK in use. |
| SFNEXT | EQU \$5B83 | 2 | End of RAM disk catalogue marker. Pointer to first empty catalogue entry. |
| SFSPACE | EQU \$5B85 | 3 | Number of bytes free in RAM disk (3 bytes, 17 bit, LSB first). |
| ROW01 | EQU \$5B88 | 1 | Stores keypad data for row 3, and flags: Bit 0 : 1=Key '+' pressed. Bit 1 : 1=Key '6' pressed. Bit 2 : 1=Key '5' pressed. Bit 3 : 1=Key '4' pressed. Bits 4-5: Always 0. Bit 6 : 1=Indicates successful communications to the keypad. Bit 7 : 1=If communications to the keypad established. |

SPANISH SPECTRUM +2 ROM 0 DISASSEMBLY

| | | | |
|---------|------------|----|--|
| ROW23 | EQU \$5B89 | 1 | Stores keypad key press data for rows 1 and 2: Bit 0: 1=Key ')' pressed. Bit 1: 1=Key '(' pressed. Bit 2: 1=Key '*' pressed. Bit 3: 1=Key '/' pressed. Bit 4: 1=Key '-' pressed. Bit 5: 1=Key '9' pressed. Bit 6: 1=Key '8' pressed. Bit 7: 1=Key '7' pressed. |
| ROW45 | EQU \$5B8A | 1 | Stores keypad key press data for rows 4 and 5: Bit 0: Always 0. Bit 1: 1=Key '.' pressed. Bit 2: Always 0. Bit 3: 1=Key '0' pressed. Bit 4: 1=Key 'ENTER' pressed. Bit 5: 1=Key '3' pressed. Bit 6: 1=Key '2' pressed. Bit 7: 1=Key '1' pressed. |
| SYNRET | EQU \$5B8B | 2 | Return address for ONERR routine. |
| LASTV | EQU \$5B8D | 5 | Last value printed by calculator. |
| RNLINE | EQU \$5B92 | 2 | Address of the length bytes in the line currently being renumbered. |
| RNFIRST | EQU \$5B94 | 2 | Starting line number when renumbering. Default value of 10. |
| RNSTEP | EQU \$5B96 | 2 | Step size when renumbering. Default value of 10. |
| STRIP1 | EQU \$5B98 | 32 | Used as RAM disk transfer buffer (32 bytes to \$5BB7). Used to hold Sinclair stripe character patterns (16 bytes to \$5BA7). |
| | | | ... |
| TSTACK | EQU \$5BFF | n | Temporary stack (grows downwards). The byte at \$5BFF is not actually used. |

Standard System Variables

These occupy addresses \$5C00-\$5CB5.

See the end of this document for descriptions of the standard system variables.

RAM Disk Catalogue

The catalogue can occupy addresses \$C000-\$EBFF in physical RAM bank 7, starting at \$EBFF and growing downwards.

Each entry contains 20 bytes:

Bytes \$00-\$09: Filename.

Bytes \$0A-\$0C: Start address of file in RAM disk area.

Bytes \$0D-\$0F: Length of file in RAM disk area.

Bytes \$10-\$12: End address of file in RAM disk area (used as current position indicator when loading/saving).

Byte \$13 : Flags:

Bit 0 : 1=Entry requires updating.

Bits 1-7: Not used (always hold 0).

The catalogue can store up to 562 entries, and hence the RAM disk can never hold more than 562 files no matter how small the files themselves are.

Note that filenames are case sensitive.

The shadow screen (SCREEN 1) also resides in physical RAM bank 7 and so if more than 217 catalogue entries are created then SCREEN 1 will become corrupted [Credit: Toni Baker, ZX Computing Monthly].

However, since screen 1 cannot be used from BASIC, it may have been a design decision to allow the RAM disk to overwrite it.

The actual files are stored in physical RAM banks 1, 3, 4 and 6 (logical banks 0, 1, 2, 3), starting from \$C000 in physical RAM bank 1 and growing upwards.

A file consists of a 9 byte header followed by the data for the file. The header bytes have the following meaning:

Byte \$00 : File type - \$00=Program, \$01=Numeric array, \$02=Character array, \$03=Code/Screen\$.

Bytes \$01-\$02: Length of program/code block/screen\$/array (\$1B00 for screen\$).

Bytes \$03-\$04: Start of code block/screen\$ (\$4000 for screen\$).

Bytes \$05-\$06: Offset to the variables (i.e. length of program) if a program. For an array, \$05 holds the variable name.

Bytes \$07-\$08: Auto-run line number for a program (\$80 in high byte if no auto-run).

Editor Workspace Variables

These occupy addresses \$EC00-\$FFFF in physical RAM bank 7, and form a workspace used by 128 BASIC Editor.

| | | |
|--------|---|---|
| \$EC00 | 3 | Byte 0: Flags used when inserting a line into the BASIC program (first 4 bits are mutually exclusive). Bit 0: 1=First row of the BASIC line off top of screen. Bit 1: 1=On first row of the BASIC line. |
|--------|---|---|

SPANISH SPECTRUM +2 ROM 0 DISASSEMBLY

| | | |
|--------|-----|---|
| | | <p>Bit 2: 1=Using lower screen and only first row of the BASIC line visible.</p> <p>Bit 3: 1=At the end of the last row of the BASIC line.</p> <p>Bit 4: Not used (always 0).</p> <p>Bit 5: Not used (always 0).</p> <p>Bit 6: Not used (always 0).</p> <p>Bit 7: 1=Column with cursor not yet found.</p> <p>Byte 1: Column number of current position within the BASIC line being inserted. Used when fetching characters.</p> <p>Byte 2: Row number of current position within the BASIC line is being inserted. Used when fetching characters.</p> |
| \$EC03 | 3 | <p>Byte 0: Flags used upon an error when inserting a line into the BASIC program (first 4 bits are mutually exclusive).</p> <p>Bit 0: 1=First row of the BASIC line off top of screen.</p> <p>Bit 1: 1=On first row of the BASIC line.</p> <p>Bit 2: 1=Using lower screen and only first row of the BASIC line visible.</p> <p>Bit 3: 1=At the end of the last row of the BASIC line.</p> <p>Bit 4: Not used (always 0).</p> <p>Bit 5: Not used (always 0).</p> <p>Bit 6: Not used (always 0).</p> <p>Bit 7: 1=Column with cursor not yet found.</p> <p>Byte 1: Start column number where BASIC line is being entered. Always holds 0.</p> <p>Byte 2: Start row number where BASIC line is being entered.</p> |
| \$EC06 | 2 | Count of the number of editable characters in the BASIC line up to the cursor within the Screen Line Edit Buffer. |
| \$EC08 | 2 | Version of E_PPC used by BASIC Editor to hold last line number entered. |
| \$EC0C | 1 | Current menu index. |
| \$EC0D | 1 | <p>Flags used by 128 BASIC Editor:</p> <p>Bit 0: 1=Screen Line Edit Buffer (including Below-Screen Line Edit Buffer) is full.</p> <p>Bit 1: 1=Menu is displayed.</p> <p>Bit 2: 1=Using RAM disk.</p> <p>Bit 3: 1=Current line has been altered.</p> <p>Bit 4: 1=Return to calculator, 0=Return to main menu.</p> <p>Bit 5: 1=Do not process the BASIC line (used by the Calculator).</p> <p>Bit 6: 1=Editing area is the lower screen, 0=Editing area is the main screen.</p> <p>Bit 7: 1=Waiting for key press, 0=Got key press.</p> |
| \$EC0E | 1 | <p>Mode:</p> <p>\$00 = Edit Menu mode.</p> <p>\$04 = Calculator mode.</p> <p>\$07 = Tape Loader mode. [Effectively not used as overwritten by \$FF]</p> <p>\$FF = Tape Loader mode.</p> |
| \$EC0F | 1 | Main screen colours used by the 128 BASIC Editor - alternate ATTR_P. |
| \$EC10 | 1 | Main screen colours used by the 128 BASIC Editor - alternate MASK_P. |
| \$EC11 | 1 | Temporary screen colours used by the 128 BASIC Editor - alternate ATTR_T. |
| \$EC12 | 1 | Temporary screen colours used by the 128 BASIC Editor - alternate MASK_T. |
| \$EC13 | 1 | <p>Temporary store for P_FLAG:</p> <p>Bit 0: 1=OVER 1, 0=OVER 0.</p> <p>Bit 1: Not used (always 0).</p> <p>Bit 2: 1=INVERSE 1, INVERSE 0.</p> <p>Bit 3: Not used (always 0).</p> <p>Bit 4: 1=Using INK 9.</p> <p>Bit 5: Not used (always 0).</p> <p>Bit 6: 1=Using PAPER 9.</p> <p>Bit 7: Not used (always 0).</p> |
| \$EC14 | 1 | Not used. |
| \$EC15 | 1 | Holds the number of editing lines: 20 for the main screen, 1 for the lower screen. |
| \$EC16 | 735 | <p>Screen Line Edit Buffer. This represents the text on screen that can be edited. It holds 21 rows,</p> <p>with each row consisting of 32 characters followed by 3 data bytes. Areas of white space that do not contain any editable characters (e.g. the indent that starts subsequent</p> <p>rows of a BASIC line) contain the value \$00.</p> <p>Data Byte 0:</p> |

SPANISH SPECTRUM +2 ROM 0 DISASSEMBLY

Bit 0: 1=The first row of the BASIC line.

Bit 1: 1=Spans onto next row.

Bit 2: Not used (always 0).

Bit 3: 1=The last row of the BASIC line.

Bit 4: 1=Associated line number stored.

Bit 5: Not used (always 0).

Bit 6: Not used (always 0).

Bit 7: Not used (always 0).

Data Bytes 1-2: Line number of corresponding BASIC line (stored for the first row of the BASIC line only, holds \$0000).

\$EEF5 1 Flags used when listing the BASIC program:

Bit 0 : 0=Not on the current line, 1=On the current line.

Bit 1 : 0=Previously found the current line, 1=Not yet found the current line.

Bit 2 : 0=Enable display file updates, 1=Disable display file updates.

Bits 3-7: Not used (always 0).

\$EEF6 1 Store for temporarily saving the value of TVFLAG.

\$EEF7 1 Store for temporarily saving the value of COORDS.

\$EEF9 1 Store for temporarily saving the value of P_POSN.

\$EEFA 2 Store for temporarily saving the value of PR_CC.

\$EEFC 2 Store for temporarily saving the value of ECHO_E.

\$EEFE 2 Store for temporarily saving the value of DF_CC.

\$EF00 2 Store for temporarily saving the value of DF_CCL.

\$EF01 1 Store for temporarily saving the value of S_POSN.

\$EF03 2 Store for temporarily saving the value of SPOSNL.

\$EF05 1 Store for temporarily saving the value of SCR_CT.

\$EF06 1 Store for temporarily saving the value of ATTR_P.

\$EF07 1 Store for temporarily saving the value of MASK_P.

\$EF08 1 Store for temporarily saving the value of ATTR_T.

\$EF09 1512 Used to store screen area (12 rows of 14 columns) where menu will be shown.

The rows are stored one after the other, with each row consisting of the following:

- 8 lines of 14 display file bytes.

- 14 attribute file bytes.

\$F4F1-\$F6E9 Not used. 505 bytes.

\$F6EA 2 The jump table address for the current menu.

\$F6EC 2 The text table address for the current menu.

\$F6EE 1 Cursor position info - Current row number.

\$F6EF 1 Cursor position info - Current column number.

\$F6F0 1 Cursor position info - Preferred column number. Holds the last user selected column position. The Editor will attempt to

place the cursor on this column when the user moves up or down to a new line.

\$F6F1 1 Edit area info - Top row threshold for scrolling up.

\$F6F2 1 Edit area info - Bottom row threshold for scrolling down.

\$F6F3 1 Edit area info - Number of rows in the editing area.

\$F6F4 1 Flags used when deleting:

Bit 0 : 1=Deleting on last row of the BASIC line, 0=Deleting on row other than the last row of the BASIC line.

Bits 1-7: Not used (always 0).

\$F6F5 1 Number of rows held in the Below-Screen Line Edit Buffer.

\$F6F6 2 Intended to point to the next location to access within the Below-Screen Line Edit Buffer, but incorrectly initialised to \$0000 by the routine at \$310E (ROM 0) and then never used.

\$F6F8 735 Below-Screen Line Edit Buffer. Holds the remainder of a BASIC line that has overflowed off the bottom of the Screen Line Edit Buffer. It can hold 21 rows, with each row

consisting of 32 characters followed by 3 data bytes. Areas of white space that do not contain any editable characters (e.g. the indent that starts subsequent rows of a BASIC line)

contain the value \$00.

Data Byte 0:

Bit 0: 1=The first row of the BASIC line.

Bit 1: 1=Spans onto next row.

Bit 2: Not used (always 0).

SPANISH SPECTRUM +2 ROM 0 DISASSEMBLY

| | | |
|---------------|-----|---|
| | | Bit 3: 1=The last row of the BASIC line. |
| | | Bit 4: 1=Associated line number stored. |
| | | Bit 5: Not used (always 0). |
| | | Bit 6: Not used (always 0). |
| | | Bit 7: Not used (always 0). |
| | | Data Bytes 1-2: Line number of corresponding BASIC line (stored for the first row of the BASIC line only, holds \$0000). |
| \$F9D7 | 2 | Line number of the BASIC line in the program area being edited (or \$0000 for no line). |
| \$F9DB | 1 | Number of rows held in the Above-Screen Line Edit Buffer. |
| \$F9DC | 2 | Points to the next location to access within the Above-Screen Line Edit Buffer. |
| \$F9DE | 700 | Above-Screen Line Edit Buffer. Holds the rows of a BASIC line that has overflowed off the top of the Screen Line Edit Buffer. It can hold 20 rows, with each row consisting of 32 characters followed by 3 data bytes. Areas of white space that do not contain any editable characters (e.g. the indent that starts subsequent rows of a BASIC line) contain the value \$00. Data Byte 0: Bit 0: 1=The first row of the BASIC line. Bit 1: 1=Spans onto next row. Bit 2: Not used (always 0). Bit 3: 1=The last row of the BASIC line. Bit 4: 1=Associated line number stored. Bit 5: Not used (always 0). Bit 6: Not used (always 0). Bit 7: Not used (always 0). Data Bytes 1-2: Line number of corresponding BASIC line (stored for the first row of the BASIC line only, holds \$0000). |
| \$FC9A | 2 | The line number at the top of the screen, or \$0000 for the first line. |
| \$FC9E | 1 | \$00=Print a leading space when constructing keyword. |
| \$FC9F | 2 | Address of the next character to fetch within the BASIC line in the program area, or \$0000 for no next character. |
| \$FCA1 | 2 | Address of the next character to fetch from the Keyword Construction Buffer, or \$0000 for no next character. |
| \$FCA3 | 11 | Keyword Construction Buffer. Holds either a line number or keyword string representation. |
| \$FCAE-\$FCFC | | Construct a BASIC Line routine. « RAM routine - See end of file for description » |
| \$FCFD-\$FD2D | | Copy String Into Keyword Construction Buffer routine. « RAM routine - See end of file for description » |
| \$FD2E-\$FD69 | | Identify Character Code of Token String routine. « RAM routine - See end of file for description » |
| \$FD6A | 1 | Flags used when shifting BASIC lines within edit buffer rows [Redundant]: Bit 0 : 1=Set to 1 but never reset or tested. Possibly intended to indicate the start of a new BASIC line and hence whether indentation required. Bit 1-7: Not used (always 0). |
| \$FD6B | 1 | The number of characters to indent subsequent rows of a BASIC line by. |
| \$FD6C | 1 | Cursor settings (indexed by IX+\$00) - initialised to \$00, but never used. |
| \$FD6D | 1 | Cursor settings (indexed by IX+\$01) - number of rows above the editing area. |
| \$FD6E | 1 | Cursor settings (indexed by IX+\$02) - initialised to \$00 (when using lower screen) or \$14 (when using main screen), but never subsequently used. |
| \$FD6F | 1 | Cursor settings (indexed by IX+\$03) - initialised to \$00, but never subsequently used. |
| \$FD70 | 1 | Cursor settings (indexed by IX+\$04) - initialised to \$00, but never subsequently used. |
| \$FD71 | 1 | Cursor settings (indexed by IX+\$05) - initialised to \$00, but never subsequently used. |
| \$FD72 | 1 | Cursor settings (indexed by IX+\$06) - attribute colour. |
| \$FD73 | 1 | Cursor settings (indexed by IX+\$07) - screen attribute where cursor is displayed. |
| \$FD74 | 9 | The Keyword Conversion Buffer holding text to examine to see if it is a keyword. |
| \$FD7D | 2 | Address of next available location within the Keyword Conversion Buffer. |
| \$FD7F | 2 | Address of the space character between words in the Keyword Conversion Buffer. |
| \$FD81 | 1 | Keyword Conversion Buffer flags, used when tokenizing a BASIC line: Bit 0 : 1=Buffer contains characters. Bit 1 : 1=Indicates within quotes. |

SPANISH SPECTRUM +2 ROM 0 DISASSEMBLY

| | | |
|---------------|---|--|
| | | Bit 2 : 1=Indicates within a REM. |
| | | Bits 3-7: Not used (always reset to 0). |
| \$FD82 | 2 | Address of the position to insert the next character within the BASIC line workspace. The BASIC line is created at the spare space pointed to by E_LINE. |
| \$FD84 | 1 | BASIC line insertion flags, used when inserting a characters into the BASIC line workspace: Bit 0 : 1=The last character was a token. Bit 1 : 1=The last character was a space. Bits 2-7: Not used (always 0). |
| \$FD85 | 2 | Count of the number of characters in the typed BASIC line being inserted. |
| \$FD87 | 2 | Count of the number of characters in the tokenized version of the BASIC line being inserted. |
| \$FD89 | 1 | Holds '<' or '>' if this was the previously examined character during tokenization of a BASIC line, else \$00. |
| \$FD8A | 1 | Locate Error Marker flag, holding \$01 is a syntax error was detected on the BASIC line being inserted and the equivalent position within the typed BASIC line needs to be found with, else it holds \$00 when tokenizing a BASIC line. |
| \$FD8B | 2 | Stores the stack pointer for restoration upon an insertion error into the BASIC line workspace. |
| \$FD8C-\$FF23 | | Not used. 408 bytes. |
| \$FF24 | 2 | Never used. An attempt is made to set it to \$EC00. This is a remnant from the Spanish 128, which stored the address of the Screen Buffer here. The value is written to RAM bank 0 instead of RAM bank 7, and the value never subsequently accessed. |
| \$FF26 | 2 | Not used. |
| \$FF28-\$FF60 | | Not used. On the Spanish 128 this memory holds a routine that copies a character into the display file. The code to copy to routine into RAM, and the routine itself are present in ROM 0 but are never executed. « RAM routine - See end of file for description » |
| \$FF61-\$FFFF | | Not used. 159 bytes. |

RESTART ROUTINES — PART 1

RST \$10, \$18 and \$20 call the equivalent subroutines in ROM 1, via RST \$28.

RST \$00 - Reset the machine.

RST \$08 - Not used. Would have invoked the ZX Interface 1 if fitted.

RST \$10 - Print a character (equivalent to RST \$10 ROM 1).

RST \$18 - Collect a character (equivalent to RST \$18 ROM 1).

RST \$20 - Collect next character (equivalent to RST \$20 ROM 1).

RST \$28 - Call routine in ROM 1.

RST \$30 - Not used.

RST \$38 - Not used.

RST \$00 — Reset Machine

```

DEFB \$00, \$00

RST \$28 — Call Routine in ROM 1

RST 28 calls a routine in ROM 1 (or alternatively a routine in RAM while ROM 1 is paged in). Call as follows: RST 28 / DEFW address.

| | | |
|--------|-----------------|---|
| L0028: | EX (SP),HL | Get the address after the RST \$28 into HL, saving HL on the stack. |
| | PUSH AF | Save the AF registers. |
| | LD A,(HL) | Fetch the first address byte. |
| | INC HL | Point HL to the byte after |
| | INC HL | the required address. |
| | LD (RETADDR),HL | \$5B5A. Store this in RETADDR. |
| | DEC HL | (There is no RST \$30) |
| | LD H,(HL) | Fetch the second address byte. |
| | LD L,A | HL=Subroutine to call. |
| | POP AF | Restore AF. |
| | JP L005C | Jump ahead to continue. |
| L0037: | DEFB \$00 | [Spare byte] |

MASKABLE INTERRUPT ROUTINE

This routine preserves the HL register pair. It then performs the following: - Execute the ROM switching code held in RAM to switch to ROM 1.

- Execute the maskable interrupt routine in ROM 1.
- Execute the ROM switching code held in RAM to return to ROM 0.
- Return to address \$0048 (ROM 0).

| | | |
|--------|-------------|--|
| L0038: | PUSH HL | Save HL register pair. |
| | LD HL,L0048 | Return address of \$0048 (ROM 0). |
| | PUSH HL | |
| | LD HL,SWAP | \$5B00. Address of swap ROM routine held in RAM at \$5B00. |
| | PUSH HL | |
| | LD HL,L0038 | Maskable interrupt routine address \$0038 (ROM 0). |
| | PUSH HL | |
| | JP SWAP | \$5B00. Switch to other ROM (ROM 1) via routine held in RAM at \$5B00. |
| L0048: | POP HL | Restore the HL register pair. |
| | RET | End of interrupt routine. |

ERROR HANDLER ROUTINES — PART 1

128K Error Routine

| | | |
|--------|----------------|---|
| L004A: | LD BC,\$7FFD | |
| | XOR A | ROM 0, Bank 0, Screen 0, 128K mode. |
| | DI | Ensure interrupts are disabled whilst paging. |
| | OUT (C),A | |
| | LD (BANK_M),A | \$5B5C. Note the new paging status. |
| | EI | Re-enable interrupts. |
| | DEC A | A=\$FF. |
| | LD (IY+\$00),A | Set ERR_NR to no error (\$FF). |
| | JP L0321 | Jump ahead to continue. |

RESTART ROUTINES — PART 2

Call ROM 1 Routine (RST \$28 Continuation)

Continuation from routine at \$0028 (ROM 0).

| | | |
|--------|----------------|--|
| L005C: | LD (TARGET),HL | \$5B58. Save the address in ROM 0 to call. |
|--------|----------------|--|

| | |
|----------------|---|
| LD HL,YOUNGER | \$5B14. HL='Return to ROM 0' routine held in RAM. |
| EX (SP),HL | Stack HL. |
| PUSH HL | Save previous stack address. |
| LD HL,(TARGET) | \$5B58. HL=Retrieve address to call. [There is no NMI code. Credit: Andrew Owen]. |
| EX (SP),HL | Stack HL. |
| JP SWAP | \$5B00. Switch to other ROM (ROM 1) and return to address to call. |

RAM ROUTINES

The following code will be copied to locations \$5B00 to \$5B57, within the old ZX Printer buffer.

Swap to Other ROM (copied to \$5B00)

Switch to the other ROM from that currently paged in.

[The switching between the two ROMs invariably enables interrupts, which may not always be desired (see the bug at \$09EC (ROM 0) in the PLAY command). To overcome this issue would require a rewrite of the SWAP routine as follows, but this is larger than the existing routine and so cannot simply be used in direct replacement of it. A work-around solution is to poke a JP instruction at the start of the SWAP routine in the ZX Printer buffer and direct control to the replacement routine held somewhere else in RAM. Credit: Toni Baker, ZX Computing Monthly] [However, the PLAY command bug may be fixed in another manner within the PLAY command itself, in which case there is no need to modify the SWAP routine.]

SWAP:

| | |
|-----------------|---|
| PUSH AF | Stack AF. |
| PUSH BC | Stack BC. |
| LD A,R | P/V flag=Interrupt status. |
| PUSH AF | Stack interrupt status. |
| LD BC,\$7FFD | BC=Port number required for paging. |
| LD A,(BANK_M) | A=Current paging configuration. |
| XOR \$10 | Complement 'ROM' bit. |
| DI | Disable interrupts (in case an interrupt occurs between the next two instructions). |
| LD (BANK_M),A | Store revised paging configuration. |
| OUT (C),A | Page ROM. |
| POP AF | P/V flag=Former interrupt status. |
| JP PO,SWAP_EXIT | Jump if interrupts were previously disabled. |
| EI | Re-enable interrupts. |

SWAP_EXIT:

| | |
|--------|-------------|
| POP BC | Restore BC. |
| POP AF | Restore AF. |
| RET | |

L006B:

| | |
|---------------|---|
| PUSH AF | Save AF and BC. |
| PUSH BC | |
| LD BC,\$7FFD | |
| LD A,(BANK_M) | \$5B5C. |
| XOR \$10 | Select other ROM. |
| DI | Disable interrupts whilst switching ROMs. |
| LD (BANK_M),A | \$5B5C. |
| OUT (C),A | Switch to the other ROM. |
| EI | |
| POP BC | Restore BC and AF. |
| POP AF | |
| RET | |

Return to Other ROM Routine (copied to \$5B14)

Switch to the other ROM from that currently paged in
and then return to the address held in RETADDR.
YOUNGER

| | | |
|--------|-----------------|----------------------------------|
| L007F: | CALL SWAP | \$5B00. Toggle to the other ROM. |
| | PUSH HL | |
| | LD HL,(RETADDR) | \$5B5A. |
| | EX (SP),HL | |

RET

Return to the address held in RETADDR.

Error Handler Routine (copied to \$5B1D)

This error handler routine switches back to ROM 0 and then executes the routine pointed to by system variable TARGET.

ONERR

| | | |
|--------|---------------|---|
| L0088: | DI | Ensure interrupts are disabled whilst paging. |
| | LD A,(BANK_M) | \$5B5C. Fetch current paging configuration. |
| | AND \$EF | Select ROM 0. |
| | LD (BANK_M),A | \$5B5C. Save the new configuration |
| | LD BC,\$7FFD | |
| | OUT (C),A | Switch to ROM 0. |
| | EI | |
| | JP L00C3 | Jump to \$00C3 (ROM 0) to continue. |

'P' Channel Input Routine (copied to \$5B2F)

Called when data is read from channel 'P'.

It causes ROM 0 to be paged in so that the new RS232 routines can be accessed.

PIN

| | | |
|--------|-------------|-----------------------------------|
| L009A: | LD HL,L06F7 | RS232 input routine within ROM 0. |
| | JR L00A2 | |

'P' Channel Output Routine (copied to \$5B34)

Called when data is written to channel 'P'.

It causes ROM 0 to be paged in so that the new RS232 routines can be accessed.

Entry: A=Byte to send.

POUT

| | | |
|--------|---------------|---|
| L009F: | LD HL,L07E9 | RS232 output routine within ROM 0. |
| L00A2: | EX AF,AF' | Save AF registers. |
| | LD BC,\$7FFD | |
| | LD A,(BANK_M) | \$5B5C. Fetch the current paging configuration |
| | PUSH AF | and save it. |
| | AND \$EF | Select ROM 0. |
| | DI | Ensure interrupts are disabled whilst paging. |
| | LD (BANK_M),A | \$5B5C. Store the new paging configuration. |
| | OUT (C),A | Switch to ROM 0. |
| | JP L0605 | Jump to the RS232 channel input/output handler routine. |

'P' Channel Exit Routine (copied to \$5B4A)

Used when returning from a channel 'P' read or write operation.

It causes the original ROM to be paged back in and returns back to the calling routine.

POUT2

| | | |
|--------|---------------|---|
| L00B5: | EX AF,AF' | Save AF registers. For a read, A holds the byte read and the flags the success status. |
| | POP AF | Retrieve original paging configuration. |
| | LD BC,\$7FFD | |
| | DI | Ensure interrupts are disabled whilst paging. |
| | LD (BANK_M),A | \$5B5C. Store original paging configuration. |
| | OUT (C),A | Switch back to original paging configuration. |
| | EI | |
| | EX AF,AF' | Restore AF registers. For a read, A holds the byte read and the flags the success status. |
| | RET | « End of RAM Routines » |

ERROR HANDLER ROUTINES — PART 2

Call Subroutine

Called from ONERR (\$5B1D) to execute the routine pointed to by system variable SYNRET.

| | | |
|--------|---------------------------|---|
| L00C3: | LD HL,(SYNRET) JP (HL) | \$5B8B. Fetch the address to call. and execute it. |
|--------|---------------------------|---|

INITIALISATION ROUTINES — PART 1

Reset Routine (RST \$00 Continuation, Part 1)

Continuation from routine at \$0000 (ROM 0). It performs a test on all RAM banks. This test is crude and can fail to detect a variety of RAM errors.

| | | |
|--------|---|--|
| L00C7: | LD B,\$08 | Loop through all RAM banks. |
| L00C9: | LD A,B EXX DEC A LD BC,\$7FFD OUT (C),A LD HL,\$C000 LD DE,\$C001 LD BC,\$3FFF LD A,\$FF LD (HL),A CP (HL) JR NZ,L0131 XOR A LD (HL),A CP (HL) JR NZ,L0131 LDIR EXX DJNZ L00C9 LD (ROW01),A LD C,\$FD LD D,\$FF LD E,\$BF LD B,D LD A,\$0E OUT (C),A LD B,E LD A,\$FF OUT (C),A JR L0137 | Save B register. RAM bank number 0 to 7. 128K mode, ROM 0, Screen 0. Switch RAM bank. Start of the current RAM bank. All 16K of RAM bank. Store \$FF into RAM location. Check RAM integrity. Jump if RAM error found. Store \$00 into RAM location. Check RAM integrity. Jump if difference found. Clear the whole page Restore B registers. Repeat for other RAM banks. \$5B88. Signal no communications in progress to the keypad. BC=\$FFFD, DE=\$FFBF. Select AY register 14. BC=\$BFFD. Set AY register 14 to \$FF. This will force a communications reset to the keypad if present. Jump ahead to continue. |
| L00FF: | DEFB \$00 | [Spare byte] |

ROUTINE VECTOR TABLE

| | | |
|--------|----------|--|

| L012A: | JP L090F | COPY (screen dump) routine. |
| L012D: | RST 28H | Call keypad scan routine in ROM 1. |
| | DEFW KP_SCAN-\$0100 | \$3B01. [BUG] - The address jumps into the middle of the keypad decode routine in ROM 1. It |
| | RET | looks like it is supposed to deal with the keypad and so the most likely addresses are \$3A42 (read keypad) or \$39A0 (scan keypad). At \$3C01 in ROM 1 is a vector jump command to \$39A0 to scan the keypad and this is similar enough to the \$3B01 to imply a simple error in one of the bytes. Credit: Paul Farrow] |

INITIALISATION ROUTINES — PART 2

Fatal RAM Error

Set the border colour to indicate which RAM bank was found faulty: RAM bank 7 - Black.

RAM bank 6 - White.

RAM bank 5 - Yellow.

RAM bank 4 - Cyan.

RAM bank 3 - Green.

RAM bank 2 - Magenta.

RAM bank 1 - Red.

RAM bank 0 - Blue.

| | | |
|--------|--------------|------------------------------------|
| L0131: | EXX | Retrieve RAM bank number + 1 in B. |
| | LD A,B | Indicate which RAM bank failed by |

| | LD HL,\$5C3C | TVFLAG. |
| | RES 3,(HL) | Signal mode has not changed. |
| | LD A,\$19 | 25. |
| | SUB (IY+\$4F) | S_POSN+1. Subtract the current print row position. |
| | LD (\$5C8C),A | SCR_CT. Set the number of scrolls. |
| | SET 7,(IY+\$01) | FLAGS. Not syntax checking. |
| | LD (IY+\$0A),\$01 | NSPPC. Set line to be jumped to as line 1. |

[BUG - Whenever a typed in command is executed directly from the editing workspace, a new GO SUB marker is set up on the stack. Any existing GO SUB calls that were on the stack are lost and as a result attempting to continue the program (without the use of CLEAR or RUN) will likely lead to a "7 RETURN without GOSUB" error report message being displayed. However, the stack marker will already have been lost due to the error handler routine at \$0321. The first action it does is to reset the stack pointer to point to the location of RAMTOP, i.e. after the GO SUB marker. This is why it is necessary for a new GO SUB marker needs to be set up. Credit: Michal Skrzypek]

| | |
|----------------|--|
| LD HL,\$3E00 | The end of GO SUB stack marker. |
| PUSH HL | Place it on the stack. |
| LD HL,ONERR | \$5B1D. The return address should an error occur. |
| PUSH HL | Place it on the stack. |
| LD (\$5C3D),SP | ERR_SP. Store error routine address. |
| LD HL,L0321 | Address of error handler routine in ROM 0. |
| LD (SYNRET),HL | \$5B8B. Store it in SYNRET. |
| JP L1857 | Jump ahead to the main parser routine to execute the line. |

ERROR HANDLER ROUTINES — PART 3

Error Handler Routine

[BUG - Upon terminating a BASIC program, either via reaching the end of the program or due to an error occurring, execution is passed to this routine. The first action it does is to reset the stack pointer to point to the location of RAMTOP, i.e. after the GO SUB marker. However, this means that any existing GO SUB calls that were on the stack are lost and so attempting to continue the program (without the use of CLEAR or RUN) will likely lead to a "7 RETURN without GOSUB" error report message being displayed. When a new typed in command is executed, the code at \$030C sets up a new GO SUB marker on the stack. Credit: Michal Skrzypek]

| | | |
|--------|-----------------|--|
| L0321: | LD SP,\$5CB2) | RAMTOP. |
| | INC SP | Reset SP to top of memory map. |
| | LD HL,TSTACK | \$5BFF. |
| | LD (OLDSP),HL | \$5B81. Use the temporary stack as the previous stack. |
| | HALT | Trap error conditions where interrupts are disabled. |
| | RES 5,(IY+\$01) | FLAGS. Signal no new key. |
| | LD HL,FLAGS3 | \$5B66. |
| | BIT 2,(HL) | Editing RAM disk catalogue? |
| | JR Z,L034A | Jump if not. |
| | CALL L1F64 | Use Workspace RAM configuration (physical RAM bank 7). |
| | LD IX,(SFNEXT) | \$5B83. |
| | LD BC,\$0014 | Catalogue entry size. |

| | JR Z,L03DD | Jump if so. |
| | ADD HL,BC | HL=SUBPPC. The current statement number. |
| L03DD: | LDDR | Copy SUBPPC and PPC to OSPPC and OLDPPC, for use by CONTINUE. |
| L03DF: | LD (IY+\$0A),\$FF | NSPPC. Signal no current statement number. |
| | RES 3,(IY+\$01) | FLAGS. Select K-Mode. |
| | LD HL,FLAGS3 | \$5B66. |
| | RES 0,(HL) | Select 128 Editor mode. |
| | JP L25EA | Jump ahead to return control to the Editor. |

Error Handler Routine When Parsing BASIC Line

| | | |
|--------|--------------|------------------------------------|
| L03EF: | LD A,\$10 | Error code 'G - No room for line'. |
| | LD BC,\$0000 | |
| | JP L034E | Jump to print the error code. |

COMMAND EXECUTION ROUTINES — PART 2

Parse a BASIC Line with a Line Number

This routine handles insertion of a BASIC line specified with a line number, or just a line number specified on its own, i.e. delete the line.

| | | |
|--------|----------------|--|
| L03F7: | LD (\$5C49),BC | E_PPC. Store the line as the current line number with the program cursor. |
| | CALL L1F64 | Use Workspace RAM configuration (physical RAM bank 7). |
| | LD A,B | [This test could have been performed before paging in bank 7 and hence could have benefited from a slight speed improvement. |
| | OR C | The test is redundant since BC holds a non-zero line number] |
| | JR Z,L040A | Jump if no line number. |
| | LD (\$5C49),BC | E_PPC. Current edit line number. [Redundant instruction - Line number has already been stored] |
| | | Temporary E_PPC used by BASIC Editor. |
| L040A: | LD (\$EC08),BC | Use Normal RAM Configuration (physical RAM bank 0). |
| | CALL L1F3F | CH_ADD. Point to the next character in the BASIC line. |
| | LD HL,(\$5C5D) | |
| | EX DE,HL | |
| | LD HL,L03EF | Address of error handler routine should there be no room for the line. |
| | PUSH HL | Stack it. |
| | LD HL,(\$5C61) | WORKSP. |
| | SCF | |
| | SBC HL,DE | HL=Length of BASIC line. |
| | PUSH HL | Stack it. |
| | LD H,B | |
| | LD L,C | Transfer edit line number to HL. |

| | |
|----------------|--|
| RST 28H | |
| DEFW LINE_ADDR | \$196E. Returns address of the line in HL. |
| JR NZ,L0429 | Jump if the line does not exist. |

The line already exists so delete it

| | | |
|--------|----------------|---|
| | RST 28H | |
| | DEFW NEXT_ONE | \$19B8. Find the address of the next line. |
| | RST 28H | |
| | DEFW RECLAIM_2 | \$19E8. Delete the line. |
| L0429: | POP BC | BC=Length of the BASIC line. |
| | LD A,C | |
| | DEC A | Is it 1, i.e. just an 'Enter' character, and hence only |
| | OR B | a line number was entered? |
| | JR NZ,L0442 | Jump if there is a BASIC statement. |

Just a line number entered. The requested line has already been deleted so move the program cursor to the next line

| | | |
|--------|----------------|---|
| | CALL L1F64 | Use Workspace RAM configuration (physical RAM bank 7). |
| | PUSH HL | Save the address of the line. |
| | LD HL,(\$5C49) | E_PPC. Fetch current edit line number. |

| | |
|-------------|---|
| POP DE | Restore message byte pointer. |
| LD A,(DE) | |
| INC DE | |
| ADD A,A | Carry flag will be set if byte is \$FF. |
| JR NC,L059C | Else print next character. |
| RET | |

INITIALISATION ROUTINES — PART 3

The 'Initial Channel Information'

Initially there are four channels ('K', 'S', 'R', & 'P') for communicating with the 'keyboard', 'screen', 'work space' and 'printer'.

For each channel the output routine address comes before the input routine address and the channel's code.

This table is almost identical to that in ROM 1 at \$15AF but with changes to the channel P routines to use the RS232 port instead of the ZX Printer. Used at \$01DD (ROM 0).

| | | |
|--------|----------------|------------------------------------|
| L05A8: | DEFW PRINT_OUT | \$09F4 - K channel output routine. |
| | DEFW KEY_INPUT | \$10A8 - K channel input routine. |
| | DEFB 'K' | \$4B - Channel identifier 'K'. |
| | DEFW PRINT_OUT | \$09F4 - S channel output routine. |
| | DEFW REPORT_J | \$15C4 - S channel input routine. |
| | DEFB 'S' | \$53 - Channel identifier 'S'. |
| | DEFW ADD_CHAR | \$0F81 - R channel output routine. |
| | DEFW REPORT_J | \$15C4 - R channel input routine. |
| | DEFB 'R' | \$52 - Channel identifier 'R'. |
| | DEFW POUT | \$5B34 - P Channel output routine. |
| | DEFW PIN | \$5B2F - P Channel input routine. |
| | DEFB 'P' | \$50 - Channel identifier 'P'. |
| | DEFB \$80 | End marker. |

The 'Initial Stream Data'

Initially there are seven streams - \$FD to \$03.

This table is identical to that in ROM 1 at \$15C6.

Used at \$0226 (ROM 0).

| | | |
|--------|-----------------|-----------------------------------|
| L05BD: | DEFB \$01, \$00 | Stream \$FD leads to channel 'K'. |
| | DEFB \$06, \$00 | Stream \$FE leads to channel 'S'. |
| | DEFB \$0B, \$00 | Stream \$FF leads to channel 'R'. |
| | DEFB \$01, \$00 | Stream \$00 leads to channel 'K'. |
| | DEFB \$01, \$00 | Stream \$01 leads to channel 'K'. |
| | DEFB \$06, \$00 | Stream \$02 leads to channel 'S'. |
| | DEFB \$10, \$00 | Stream \$03 leads to channel 'P'. |

ERROR HANDLER ROUTINES — PART 5

RS232 Output Routine

This routine handles control codes, token expansion, graphics and UDGs. It therefore cannot send binary data and hence cannot support EPSON format ESC control codes [Credit: Andrew Owen].

The routine suffers from a number of bugs as described in the comments below. It also suffers from a minor flaw in the design, which prevents interlacing screen and printer control codes and their parameters. For example, the following will not work correctly: 10 LPRINT CHR\$ 16

20 PRINT AT 0,0

30 LPRINT CHR\$ 0;"ABC"

The control byte 16 gets stored in TVDATA so that the system knows how to interpret its parameter byte. However, the AT control code 22 in line 20 will overwrite it. When line 30 is executed, TVDATA still holds the control code for 'AT' and so this line is interpreted as PRINT AT instead of PRINT INK. [Credit: Ian Collier (+3)]

Entry: A=character to output.

Exit : Carry flag reset indicates success.

| L09A1: | DEFB \$02 | 2 characters follow. |
| | DEFB \$1B, \$32 | ESC '2' - 1/6 inch line spacing. |

PLAY COMMAND ROUTINES

Up to 3 channels of music/noise are supported by the AY-3-8912 sound generator.

Up to 8 channels of music can be sent to support synthesisers, drum machines or sequencers via the MIDI interface, with the first 3 channels also played by the AY-3-8912 sound generator. For each channel of music, a MIDI channel can be assigned to it using the 'Y' command.

The PLAY command reserves and initialises space for the PLAY command. This comprises a block of \$003C bytes used to manage the PLAY command (IY points to this command data block) and a block of \$0037 bytes for each channel string (IX is used to point to the channel data block for the current channel). [Note that the command data block is \$04 bytes larger than it needs to be, and each channel data block is \$11 bytes larger than it needs to be]

Entry: B=The number of strings in the PLAY command (1..8).

Command Data Block Format

| | |
|-------------------|--|
| IY+\$00 / IY+\$01 | Channel 0 data block pointer. Points to the data for channel 0 (string 1). |
| IY+\$02 / IY+\$03 | Channel 1 data block pointer. Points to the data for channel 1 (string 2). |
| IY+\$04 / IY+\$05 | Channel 2 data block pointer. Points to the data for channel 2 (string 3). |
| IY+\$06 / IY+\$07 | Channel 3 data block pointer. Points to the data for channel 3 (string 4). |
| IY+\$08 / IY+\$09 | Channel 4 data block pointer. Points to the data for channel 4 (string 5). |
| IY+\$0A / IY+\$0B | Channel 5 data block pointer. Points to the data for channel 5 (string 6). |
| IY+\$0C / IY+\$0D | Channel 6 data block pointer. Points to the data for channel 6 (string 7). |
| IY+\$0E / IY+\$0F | Channel 7 data block pointer. Points to the data for channel 7 (string 8). |
| IY+\$10 | Channel bitmap. Initialised to \$FF and a 0 rotated in to the left for each string parameters of the PLAY command, thereby indicating the channels in use. |
| IY+\$11 / IY+\$12 | Channel data block duration pointer. Points to duration length store in channel 0 data block (string 1). |
| IY+\$13 / IY+\$14 | Channel data block duration pointer. Points to duration length store in channel 1 data block (string 2). |
| IY+\$15 / IY+\$16 | Channel data block duration pointer. Points to duration length store in channel 2 data block (string 3). |
| IY+\$17 / IY+\$18 | Channel data block duration pointer. Points to duration length store in channel 3 data block (string 4). |
| IY+\$19 / IY+\$1A | Channel data block duration pointer. Points to duration length store in channel 4 data block (string 5). |
| IY+\$1B / IY+\$1C | Channel data block duration pointer. Points to duration length store in channel 5 data block (string 6). |
| IY+\$1D / IY+\$1E | Channel data block duration pointer. Points to duration length store in channel 6 data block (string 7). |

SPANISH SPECTRUM +2 ROM o DISASSEMBLY

| | |
|-------------------|--|
| IY+\$1F / IY+\$20 | Channel data block duration pointer. Points to duration length store in channel 7 data block (string 8). |
| IY+\$21 | Channel selector. It is used as a shift register with bit 0 initially set and then shift to the left until a carry occurs, thereby indicating all 8 possible channels have been processed. |
| IY+\$22 | Temporary channel bitmap, used to hold a working copy of the channel bitmap at IY+\$10. |
| IY+\$23 / IY+\$24 | Address of the channel data block pointers, or address of the channel data block duration pointers (allows the routine at \$0A8D (ROM 0) to be used with both set of pointers). |
| IY+\$25 / IY+\$26 | Stores the smallest duration length of all currently playing channel notes. |
| IY+\$27 / IY+\$28 | The current tempo timing value (derived from the tempo parameter 60..240 beats per second). |
| IY+\$29 | The current effect waveform value. |
| IY+\$2A | Temporary string counter selector. |
| IY+\$2B..IY+\$37 | Holds a floating point calculator routine. |
| IY+\$38..IY+\$3B | Not used. |

Channel Data Block Format

| | |
|-------------------|--|
| IX+\$00 | The note number being played on this channel (equivalent to index offset into the note table). |
| IX+\$01 | MIDI channel assigned to this string (range 0 to 15). |
| IX+\$02 | Channel number (range 0 to 7), i.e. index position of the string within the PLAY command. |
| IX+\$03 | 12*Octave number (0, 12, 24, 36, 48, 60, 72, 84 or 96). |
| IX+\$04 | Current volume (range 0 to 15, or if bit 4 set then using envelope). |
| IX+\$05 | Last note duration value as specified in the string (range 1 to 9). |
| IX+\$06 / IX+\$07 | Address of current position in the string. |
| IX+\$08 / IX+\$09 | Address of byte after the end of the string. |
| IX+\$0A | Flags: Bit 0 : 1=Single closing bracket found (repeat string indefinitely). Bits 1-7: Not used (always 0). |
| IX+\$0B | Open bracket nesting level (range \$00 to \$04). |
| IX+\$0C / IX+\$0D | Return address for opening bracket nesting level 0 (points to character after the bracket). |

IX points to start of space for the last channel. Default octave is 5. No MIDI channel assigned. Default volume is 15. Default note duration. Count of the number of tied notes. Signal not to repeat the string indefinitely. No opening bracket nesting level. No closing bracket nesting level. Return address for closing bracket nesting level 0. [No need to initialise this since it is written to before it is ever tested] |
|--------|---|---|

[BUG - At this point interrupts are disabled and IY is now being used as a pointer to the master PLAY information block. Unfortunately, interrupts are enabled during the STK_FETCH call and IY is left containing the wrong value. This means that if an interrupt were to occur during execution of the subroutine then there would be a one in 65536 chance that (IY+\$40) will be corrupted - this corresponds to the volume setting for music channel A. Rewriting the SWAP routine to only re-enable interrupts if they were originally enabled would cure this bug (see end of file for description of her suggested fix). Credit: Toni Baker, ZX Computing Monthly] [An alternative and simpler solution to the fix Toni Baker describes would be to stack IY, set IY to point to the system variables at \$5C3A, call STK_FETCH, disable interrupts, then pop the stacked value back to IY. Credit: Paul Farrow]

Calculate Timing Loop Counter « RAM Routine »

This routine is copied into the command data block (offset \$2B..\$37) by the routine at \$0A24 (ROM 0).

It uses the floating point calculator found in ROM 1, which is usually invoked via a RST \$28 instruction. Since ROM 0 uses RST \$28 to call a routine in ROM 1, it is unable to invoke the floating point calculator this way. It therefore copies the following routine to RAM and calls it with ROM 1 paged in.

The routine calculates $(10/x)/7.33e-6$, where x is the tempo 'T' parameter value multiplied by 4. The result is used as an inner loop counter in the wait routine at \$0F95 (ROM 0).

Each iteration of this loop takes 26 T-states. The time taken by 26 T-states is 7.33e-6 seconds. So the total time for the loop to execute is 2.5/TEMPO seconds.

Entry: The value 4*TEMPO exists on the calculator stack (where TEMPO is in the range 60..240).

Exit : The calculator stack holds the result.

INC HL Advance to the next channel data pointer.
LD (IY+\$23),L
LD (IY+\$24),H The address of new channel data pointer.
RET

PLAY Command (Continuation)

This section is responsible for processing the PLAY command and is a continuation of the routine at \$09A4 (ROM 0). It begins by determining the first note to play on each channel and then enters a loop to play these notes, fetching the subsequent notes to play at the appropriate times.

L0A9C: CALL L0A6E Select channel data block pointers.
L0A9F: RR (IY+\$22) Working copy of channel bitmap. Test if next string present.
JR C,L0AAB Jump ahead if there is no string for this channel.

HL=Address of channel data pointer.

L0AAB: CALL L0A86 Get address of channel data block for the current string into IX.
CALL L0B7B Find the first note to play for this channel from its play string.
SLA (IY+\$21) Have all channels been processed?
JR C,L0AB6 Jump ahead if so.
CALL L0A8D Advance to the next channel data block pointer.
JR L0A9F Jump back to process the next channel.

The first notes to play for each channel have now been determined. A loop is entered that coordinates playing the notes and fetching subsequent notes when required. Notes across channels may be of different lengths and so the shortest one is determined, the tones for all channels set and then a waiting

delay entered for the shortest note delay. This delay length is then subtracted from all channel note lengths to leave the remaining lengths that each note needs to be played for. For the channel with the smallest note length, this will now have completely played and so a new note is fetched for it. The smallest length of the current notes is then determined again and the process described above repeated. A test is made on each iteration to see if all channels have run out of data to play, and if so this ends the PLAY command.

| | | |
|--------|----------------|---|
| L0AB6: | CALL L0FB0 | Find smallest duration length of the current notes across all channels. |
| | PUSH DE | Save the smallest duration length. |
| | CALL L0F61 | Play a note on each channel. |
| | POP DE | DE=The smallest duration length. |
| L0ABE: | LD A,(IY+\$10) | Channel bitmap. |

Find Next Note from Channel String

| | | |
|--------|-------------|---|
| L0B7B: | CALL L0A5D | Test for BREAK being pressed. |
| | JR C,L0B88 | Jump ahead if not pressed. |
| | CALL L0EB2 | Turn off all sound and restore IY. |
| | EI | Re-enable interrupts. |
| | CALL L05CB | Produce error report. [Could have saved 1 byte by using JP \$05F5 (ROM 0)] |
| | DEFB \$14 | "L Break into program" |
| L0B88: | CALL L0AE4 | Get the current character from the PLAY string, and advance the position pointer. |
| | JP C,L0DC1 | Jump if at the end of the string. |
| | CALL L0E0F | Find the handler routine for the PLAY command character. |
| | LD B,\$00 | |
| | SLA C | Generate the offset into the |
| | LD HL,L0DE9 | command vector table. |
| | ADD HL,BC | HL points to handler routine for this command character. |
| | LD E,(HL) | |
| | INC HL | |
| | LD D,(HL) | Fetch the handler routine address. |
| | EX DE,HL | HL=Handler routine address for this command character. |
| | CALL L0BA3 | Make an indirect call to the handler routine. |
| | JR L0B7B | Jump back to handle the next character in the string. |

Comes here after processing a non-numeric digit that does not have a specific command routine handler Hence the next note to play has been determined and so a return is made to process the other channels.

| | | |
|--------|---------|--------------------------------------|
| L0BA2: | RET | Just make a return. |
| L0BA3: | JP (HL) | Jump to the command handler routine. |

Play Command '!' (Comment)

A comment is enclosed within exclamation marks, e.g. "! A comment !".

Entry: IX=Address of the channel data block.

| | | |
|--------|------------|---|
| L0BA4: | CALL L0AE4 | Get the current character from the PLAY string, and advance the position pointer. |
| | JP C,L0DC0 | Jump if at the end of the string. |
| | CP '!' | \$21. Is it the end-of-comment character? |
| | RET Z | Return if it is. |
| | JR L0BA4 | Jump back to test the next character. |

Play Command 'O' (Octave)

The 'O' command is followed by a numeric value within the range 0 to 8, although due to loose range checking the value MOD 256 only needs to be within 0 to 8. Hence O256 operates the same as O0.

Entry: IX=Address of the channel data block.

| | | |
|--------|----------------|---|
| L0BAF: | CALL L0B3C | Get following numeric value from the string into BC. |
| | LD A,C | Is it between 0 and 8? |

| | POP HL | HL=pointer to the play command data block. |
| | LD BC,\$002B | |
| | ADD HL,BC | HL =IY+\$002B. |
| | LD IY,\$5C3A | Reset IY to \$5C3A since this is required by the floating point calculator. |
| | PUSH HL | HL=Points to the calculator RAM routine. |
| | LD HL,L0C95 | |
| | LD (RETADDR),HL | \$5B5A. Set up the return address. |
| | LD HL,YOUNGER | |
| | EX (SP),HL | Stack the address of the swap routine used when returning to this ROM. |
| | PUSH HL | Re-stack the address of the calculator RAM routine. |
| | JP SWAP | \$5B00. Toggle to other ROM and make a return to the calculator RAM routine. |

Tempo Command Return

The calculator stack now holds the value $(10/(\text{Tempo} \times 4))/7.33\text{e-}6$ and this is stored as the tempo value.

The result is used an inner loop counter in the wait routine at \$0F95 (ROM 0). Each iteration of this loop takes 26 T-states. The time taken by 26 T-states is 7.33e-6 seconds. So the total time for the loop to execute is 2.5/TEMPO seconds.

| | | |
|--------|----------------|---|
| L0C95: | DI | Interrupts get re-enabled by the call mechanism to ROM 1 so disable them again. |
| | RST 28H | |
| | DEFW FP_TO_BC | \$2DA2. Fetch the value on the top of the calculator stack. |
| | DI | Interrupts get re-enabled by the call mechanism to ROM 1 so disable them again. |
| | POP IY | Restore IY to point at the play command data block. |
| | LD (IY+\$27),C | Store tempo timing value. |
| | LD (IY+\$28),B | |

RET

Play Command 'M' (Mixer)

This command is used to select whether to use tone and/or noise on each of the 3 channels.

It is followed by a numeric value in the range 1 to 63, although due to loose range checking the value MOD 256 only needs to be within 0 to 63. Hence M256 operates the same as M0.

Entry: IX=Address of the channel data block.

| | | |
|--------|--|--|
| L0CA3: | CALL L0B3C LD A,C CP \$40 JP NC,L0F31 | Get following numeric value from the string into BC. A=Mixer value. Is it 64 or above? Jump if so to produce error report "n Out of range". |
|--------|--|--|

Bit 0: 1=Enable channel A tone.
Bit 1: 1=Enable channel B tone.
Bit 2: 1=Enable channel C tone.
Bit 3: 1=Enable channel A noise.
Bit 4: 1=Enable channel B noise.
Bit 5: 1=Enable channel C noise.

| | |
|---|--|
| CPL LD E,A LD D,\$07 CALL L0E9B RET | Invert the bits since the sound generator's mixer register uses active low enable. This also sets bit 6 1, which selects the I/O port as an output. E=Mixer value. D=Register 7 - Mixer. Write to sound generator register to set the mixer. [Could have saved 1 byte by using JP \$0E9B (ROM 0)] |
|---|--|

Play Command 'V' (Volume)

This sets the volume of a channel and is followed by a numeric value in the range 0 (minimum) to 15 (maximum), although due to loose range checking the value MOD 256 only needs to be within 0 to 15. Hence V256 operates the same as V0.

Entry: IX=Address of the channel data block.

| | | |
|--------|--|---|
| L0CB4: | CALL L0B3C LD A,C CP \$10 JP NC,L0F31 LD (IX+\$04),A | Get following numeric value from the string into BC. Is it 16 or above? Jump if so to produce error report "n Out of range". Store the volume level. |
|--------|--|---|

[BUG - An attempt to set the volume for a sound chip channel is now made. However, this routine fails to take into account that it is also called to set the volume for a MIDI only channel, i.e. play strings 4 to 8. As a result, corruption occurs to various sound generator registers, causing spurious sound output. There is in fact no need for this routine to set the volume for any channels since this is done every time a new note is played - see routine at \$0AB6 (ROM 0). the bug fix is to simply to make a return at this point. This routine therefore contains 11 surplus bytes. Credit: Ian Collier (+3), Paul Farrow (128)]

| | |
|---|--|
| LD E,(IX+\$02) LD A,\$08 ADD A,E LD D,A LD E,C CALL L0E9B RET | E=Channel number. Offset by 8. A=8+index. D=Sound generator register number for the channel. E=Volume level. Write to sound generator register to set the volume for the channel. [Could have saved 1 byte by using JP \$0E9B (ROM 0)] |
|---|--|

Play Command 'U' (Use Volume Effect)

This command turns on envelope waveform effects for a particular sound chip channel. The volume level is now controlled by the selected envelope waveform for the channel, as defined by the 'W' command. MIDI channels do not support envelope waveforms and so the routine has the effect of setting the volume of a MIDI channel to maximum, i.e. 15. It might seem odd that the volume for MIDI channels is set to 15 rather than just filtered out. However, the three sound chip channels can also drive three MIDI channels and so it would be inconsistent for these MIDI channels to have their volume set to 15 but have the other MIDI channels behave differently. However, it could be argued that all MIDI channels should be unaffected by the 'U' command.

There are no parameters to this command.

Entry: IX=Address of the channel data block.

| | | |
|--------|--|---|
| L0CCC: | LD E,(IX+\$02) LD A,\$08 ADD A,E LD D,A LD E,\$1F LD (IX+\$04),E RET | Get the channel number. Offset by 8. A=8+index. D=Sound generator register number for the channel. [This is not used and so there is no need to generate it. It was probably a left over from copying and modifying the 'V' command routine. Deleting it would save 7 bytes. Credit: Ian Collier (+3), Paul Farrow (128)] E=Select envelope defined by register 13, and reset volume bits to maximum (though these are not used with the envelope). Store that the envelope is being used (along with the reset volume level). |
|--------|--|---|

Play command 'W' (Volume Effect Specifier)

This command selects the envelope waveform to use and is followed by a numeric value in the range 0 to 7, although due to loose range checking the value MOD 256 only needs to be within 0 to 7.

Hence W256 operates the same as W0.

Entry: IX=Address of the channel data block.

| | | |
|--------|---|--|
| L0CD9: | CALL L0B3C LD A,C CP \$08 JP NC,L0F31 LD B,\$00 LD HL,L0E07 ADD HL,BC LD A,(HL) LD (IY+\$29),A RET | Get following numeric value from the string into BC. Is it 8 or above? Jump if so to produce error report "n Out of range". Envelope waveform lookup table. HL points to the corresponding value in the table. Store new effect waveform value. |
|--------|---|--|

Play Command 'X' (Volume Effect Duration)

This command allows the duration of a waveform effect to be specified, and is followed by a numeric value in the range 0 to 65535. A value of 1 corresponds to the minimum duration, increasing up to 65535 and then maximum duration for a value of 0. If no numeric value is specified then the maximum duration is used.

Entry: IX=Address of the channel data block.

| | | |
|--------|---|---|
| L0CED: | CALL L0B3C LD D,\$0B LD E,C CALL L0E9B INC D LD E,B CALL L0E9B RET | Get following numeric value from the string into BC. Register 11 - Envelope Period Fine. Write to sound generator register to set the envelope period (low byte). Register 12 - Envelope Period Coarse. Write to sound generator register to set the envelope period (high byte). [Could have saved 1 byte by using JP \$0E9B (ROM 0)] |
|--------|---|---|

Play Command 'Y' (MIDI Channel)

This command sets the MIDI channel number that the string is assigned to and is followed by a numeric value in the range 1 to 16, although due to loose range checking the value MOD 256 only needs to be within 1 to 16.

Hence Y257 operates the same as Y1.

Entry: IX=Address of the channel data block.

| | | |
|--------|--|--|
| L0CFC: | CALL L0B3C LD A,C DEC A JP M,L0F31 CP \$10 JP NC,L0F31 LD (IX+\$01),A RET | Get following numeric value from the string into BC. Is it 0? | L0D0D: | CALL L0B3C LD A,C CALL L11C2 RET | Get following numeric value from the string into BC. A=(low byte of) the value. Write byte to MIDI device. [Could have saved 1 byte by using JP \$0E9B (ROM 0)] |
|--------|---|--|

Play Command 'H' (Stop)

This command stops further processing of a play command. It has no parameters.

Entry: IX=Address of the channel data block.

| | | |
|--------|--------------------------|---|
| L0D15: | LD (IY+\$10),\$FF RET | Indicate no channels to play, thereby causing the play command to terminate. |
|--------|--------------------------|---|

Play Commands 'a'..'g', 'A'..'G', '1'.."12", '&' and '_'

This handler routine processes commands 'a'..'g', 'A'..'G', '1'.."12", '&' and '_', and determines the length of the next note to play. It provides the handling of triplet and tied notes.

It stores the note duration in the channel data block's duration length entry, and sets a pointer in the command data block's duration lengths pointer table to point at it. A single note letter is deemed to be a tied note count of 1. Triplets are deemed a tied note count of at least 2.

Entry: IX=Address of the channel data block.

A=Current character from play string.

Wait Note Duration

This routine is the main timing control of the PLAY command.

It waits for the specified length of time, which will be the lowest note duration of all active channels.

The actual duration of the wait is dictated by the current tempo.

Entry: DE=Note duration, where 96d represents a whole note.

Enter a loop waiting for $(135 + ((26 * (\text{tempo} - 100)) - 5)) * \text{DE} + 5$ T-states

| | | |
|--------|----------------|-----------------------------------|
| L0F95: | PUSH HL | (11) Save HL. |
| | LD L,(IY+\$27) | (19) Get the tempo timing value. |
| | LD H,(IY+\$28) | (19) |
| | LD BC,\$0064 | (10) BC=100 |
| | OR A | (4) |
| | SBC HL,BC | (15) HL=tempo timing value - 100. |
| | PUSH HL | (11) |
| | POP BC | (10) BC=tempo timing value - 100. |
| | POP HL | (10) Restore HL. |

Tempo timing value = $(10 / (\text{TEMPO} * 4)) / 7.33\text{e-}6$, where $7.33\text{e-}6$ is the time for 26 T-states.

The loop below takes 26 T-states per iteration, where the number of iterations is given by the tempo timing value.

So the time for the loop to execute is $2.5 / \text{TEMPO}$ seconds.

For a TEMPO of 60 beats (crotchets) per second, the time per crotchet is 1/24 second.

The duration of a crotchet is defined as 24 from the table at \$0E0C, therefore the loop will get executed 24 times and hence the total time taken will be 1 second.

The tempo timing value above has 100 subtracted from it, presumably to approximately compensate for the overhead time previously taken to prepare the notes for playing. This reduces the total time by 2600 T-states, or 733us.

| | | |

| | JR L0FB6 | Jump back to process the next channel. |
| L0FD9: | LD (IY+\$25),E | |
| | LD (IY+\$26),D | Store the smallest channel duration length. |
| | RET | |

Play a Note on Each Channel and Update Channel Duration Lengths

This routine is used to play a note and set the volume on all channels.

It subtracts an amount of time from the duration lengths of all currently playing channel note durations. The amount subtracted is equivalent to the smallest note duration length currently being played, and as determined earlier.

Hence one channel's duration will go to 0 on each call of this routine, and the others will show the remaining lengths of their corresponding notes.

Entry: IY=Address of the command data block.

| | | |

The current channel uses the smallest found duration length

[A note has been completed and so the channel volume is set to 0 prior to the next note being played. This occurs on both sound chip channels and MIDI channels. When a MIDI channel is assigned to more than one play string and a rest is used in one of those strings. As soon as the end of the rest period is encountered, the channel's volume is set to off even though one of the other play strings controlling the MIDI channel may still be playing. This can be seen using the command PLAY "Y1a&", "Y1N9a". Here, string 1 starts playing 'a' for the period of a crotchet (1/4 of a note), where as string 2 starts playing 'a' for nine periods of a crotchet (9/4 of a note). When string 1 completes its crotchet, it requests to play a period of silence via the rest '&'. This turns the volume of the MIDI channel off even though string 2 is still timing its way through its nine crotchets. The play command will therefore continue for a further seven crotchets but in silence. This is because the volume for note is set only at its start and no coordination occurs between strings to turn the volume back on for the second string. It is arguably what the correct behaviour should be in such a circumstance where the strings are providing conflicting instructions, but having the latest command or note take precedence seems a logical approach. Credit: Ian Collier (+3), Paul Farrow (128)]

[BUG - By this point, the volume for both sound chip and MIDI channels has been set to 0, i.e. off. So although the new notes have been set playing on the sound chip channels, no sound is audible. For MIDI channels, no new notes have yet been output and hence these are also silent. If the time from turning the volume off for the current note to the time to turn the volume on for the next note is short enough, then it will not be noticeable. However, the code at \$1085 (ROM 0) introduces a 1/96th of a note delay and as a result a 1/96th of a note period of silence between notes. The bug can be resolved by simply deleting the two instructions below that introduce the delay. A positive side effect of the bug in the 'V' volume command at \$0CB4 (ROM 0) is that it can be used to overcome the gaps of silence between notes for sound chip channels. By interspersing volume commands between notes, a new volume level is immediately set before the 1/96th of a note delay is introduced for the new note. Therefore, the delay occurs when the new note is audible instead of when it is silent. For example, PLAY "cV15cV15c" instead of PLAY "ccc". The note durations are still 1/96th of a note longer than they should be though. This technique will only work on the sound chip channels and not for any MIDI channels. Credit: Ian Collier (+3), Paul Farrow (128)]

Note Lookup Table

Each word gives the value of the sound generator tone registers for a given note.

SPANISH SPECTRUM +2 ROM o DISASSEMBLY

There are 9 octaves, containing a total of 108 notes. These represent notes 21 to 128. Notes 0 to 20 cannot be reproduced on the sound chip and so note 21 will be used for all of these (they will however be sent to a MIDI device if one is assigned to a channel). [Note that both the sound chip and the MIDI port can not play note 128 and so its inclusion in the table is a waste of 2 bytes]. The PLAY command does not allow octaves higher than 8 to be selected directly. Using PLAY "O8G" will select note 115. To select higher notes, sharps must be included, e.g. PLAY "O8#G" for note 116, PLAY "O8##G" for note 117, etc, up to PLAY "O8#####G" for note 127. Attempting to access note 128 using PLAY "O8#####G" will lead to error report "m Note out of range".

Play Note on MIDI Channel

This routine turns on a note on the MIDI channel and sets its volume, if MIDI channel is assigned to the current string.

Three bytes are sent, and have the following meaning:

Byte 1: Channel number \$00..\$0F, with bits 4 and 7 set.

Byte 2: Note number \$00..\$7F.

Byte 3: Note velocity \$00..\$78.

Entry: IX=Address of the channel data block.

| | | |
|--------|----------------|--|
| L118D: | LD A,(IX+\$01) | Is a MIDI channel assigned to this string? |
| | OR A | |
| | RET M | Return if not. |

A holds the assigned channel number (\$00..\$0F)

| | |
|---------|---|
| OR \$90 | Set bits 4 and 7 of the channel number. A=\$90..\$9F. |
|---------|---|

| | |
|----------------|--|
| CALL L11C2 | Write byte to MIDI device. |
| LD A,(IX+\$00) | The note number. |
| CALL L11C2 | Write byte to MIDI device. |
| LD A,(IX+\$04) | Fetch the channel's volume. |
| RES 4,A | Ensure the 'using envelope' bit is reset so |
| SLA A | that A holds a value between \$00 and \$0F. |
| SLA A | Multiply by 8 to increase the range to \$00..\$78. |
| SLA A | A=Note velocity. |
| CALL L11C2 | Write byte to MIDI device. |
| RET | [Could have saved 1 byte by using JP \$11C2 (ROM 0)] |

Turn MIDI Channel Off

This routine turns off a note on the MIDI channel, if a MIDI channel is assigned to the current string.

Three bytes are sent, and have the following meaning:

Byte 1: Channel number \$00..\$0F, with bit 7 set.

Byte 2: Note number \$00..\$7F.

Byte 3: Note velocity \$40.

Entry: IX=Address of the channel data block.

| | | |
|--------|----------------|--|
| L11AC: | LD A,(IX+\$01) | Is a MIDI channel assigned to this string? |
| | OR A | |
| | RET M | Return if not. |

A holds the assigned channel number (\$00..\$0F)

| | |
|----------------|--|
| OR \$80 | Set bit 7 of the channel number. A=\$80..\$8F. |
| CALL L11C2 | Write byte to MIDI device. |
| LD A,(IX+\$00) | The note number. |
| CALL L11C2 | Write byte to MIDI device. |
| LD A,\$40 | The note velocity. |
| CALL L11C2 | Write byte to MIDI device. |
| RET | [Could have saved 1 byte by using JP \$11C2 (ROM 0)] |

Send Byte to MIDI Device

This routine sends a byte to the MIDI port. MIDI devices communicate at 31250 baud, although this routine actually generates a baud rate of 31388, which is within the 1% tolerance supported by MIDI devices.

Entry: A=Byte to send.

| | | |
|--------|--------------|---|
| L11C2: | LD L,A | Store the byte to send. |
| | LD BC,\$FFFD | |
| | LD A,\$0E | |
| | OUT (C),A | Select register 14 - I/O port. |
| | LD BC,\$BFFD | |
| | LD A,\$FA | Set RS232 'RXD' transmit line to 0. (Keep KEYPAD 'CTS' output line low to prevent the keypad resetting) |
| | OUT (C),A | Send out the START bit. |
| L11D3: | LD E,\$03 | (7) Introduce delays such that the next bit is output 113 T-states from now. |
| | DEC E | (4) |
| | JR NZ,L11D3 | (12/7) |
| | NOP | (4) |
| | NOP | (4) |
| | NOP | (4) |
| | NOP | (4) |
| | LD A,L | (4) Retrieve the byte to send. |
| | LD D,\$08 | (7) There are 8 bits to send. |
| L11DD: | RRA | (4) Rotate the next bit to send into the carry. |
| | LD L,A | (4) Store the remaining bits. |
| | JP NC,L11E8 | (10) Jump if it is a 0 bit. |
| | LD A,\$FE | (7) Set RS232 'RXD' transmit line to 1. (Keep KEYPAD 'CTS' output line low to prevent the keypad resetting) |
| | OUT (C),A | (11) |

| | | |
|------------------|-------------|---|
| L11E8: | JR L11EE | (12) Jump forward to process the next bit. |
| | LD A,\$FA | (7) Set RS232 'RXD' transmit line to 0. (Keep KEYPAD 'CTS' output line low to prevent the keypad resetting) |
| L11EE: L11F0: | OUT (C),A | (11) |
| | JR L11EE | (12) Jump forward to process the next bit. |
| | LD E,\$02 | (7) Introduce delays such that the next data bit is output 113 T-states from now. |
| | DEC E | (4) |
| | JR NZ,L11F0 | (12/7) |
| | NOP | (4) |
| | ADD A,\$00 | (7) |
| | LD A,L | (4) Retrieve the remaining bits to send. |
| | DEC D | (4) Decrement the bit counter. |
| | JR NZ,L11DD | (12/7) Jump back if there are further bits to send. |
| | NOP | (4) Introduce delays such that the stop bit is output 113 T-states from now. |
| | NOP | (4) |
| | ADD A,\$00 | (7) |
| | NOP | (4) |
| | NOP | (4) |
| L1206: | LD A,\$FE | (7) Set RS232 'RXD' transmit line to 0. (Keep KEYPAD 'CTS' output line low to prevent the keypad resetting) |
| | OUT (C),A | (11) Send out the STOP bit. |
| | LD E,\$06 | (7) Delay for 101 T-states (28.5us). |
| | DEC E | (4) |
| | JR NZ,L1206 | (12/7) |
| | RET | (10) |

CASSETTE / RAM DISK COMMAND ROUTINES — PART 1

SAVE Routine

| | | |
|--------|--------------|----------------|
| L120A: | LD HL,FLAGS3 | \$5B66. |
| | SET 5,(HL) | Indicate SAVE. |
| | JR L1224 | |

LOAD Routine

| | | |
|--------|--------------|----------------|
| L1211: | LD HL,FLAGS3 | \$5B66. |
| | SET 4,(HL) | Indicate LOAD. |
| | JR L1224 | |

VERIFY Routine

| | | |
|--------|--------------|------------------|
| L1218: | LD HL,FLAGS3 | \$5B66. |
| | SET 7,(HL) | Indicate VERIFY. |
| | JR L1224 | |

MERGE Routine

| | | |
|--------|--------------|--|
| L121F: | LD HL,FLAGS3 | \$5B66. |
| | SET 6,(HL) | Indicate MERGE. |
| L1224: | LD HL,FLAGS3 | \$5B66. |
| | RES 3,(HL) | Indicate using cassette. |
| | RST 18H | Get current character. |
| | CP 'I' | \$21. 'I' |
| | JP NZ,L13DD | Jump ahead to handle cassette command. |

RAM disk operation

| | | |
|--------|--------------|--|
| | LD HL,FLAGS3 | \$5B66. |
| | SET 3,(HL) | Indicate using RAM disk. |
| | RST 20H | Move on to next character. |
| | JP L13DD | Jump ahead to handle RAM disk command. |
| L1238: | CALL L05CB | Produce error report. |
| | DEFB \$0B | "C Nonsense in BASIC" |

RAM Disk Command Handling

The information relating to the file is copied into memory in \$5B66 (FLAGS3) to ensure that it is available once other RAM banks are switched in. This code is very similar to that in the ZX Interface 1 ROM at \$08F6.

Entry: HL=Start address.
IX=File header descriptor.

| | | |
|--------|----------------|-----------------------------------|
| L123C: | LD (HD_0D),HL | \$5B74. Save start address. |
| | LD A,(IX+\$00) | Transfer header file information |
| | LD (HD_00),A | \$5B71. from IX to HD_00 onwards. |
| | LD L,(IX+\$0B) | |
| | LD H,(IX+\$0C) | |
| | LD (HD_0B),HL | \$5B72. |
| | LD L,(IX+\$0D) | |
| | LD H,(IX+\$0E) | |
| | LD (HD_11),HL | \$5B78. |
| | LD L,(IX+\$0F) | |
| | LD H,(IX+\$10) | |
| | LD (HD_0F),HL | \$5B76. |

A copy of the header information has now been copied from IX+\$00 onwards to HD_00 onwards

| | |
|------------|--------------------------------------|
| OR A | Test file type. |
| JR Z,L126D | Jump ahead for a program file. |
| CP \$03 | |
| JR Z,L126D | Jump ahead for a CODE/SCREEN\$ file. |

An array type

| | | |
|--------|----------------|---------------------------|
| | LD A,(IX+\$0E) | |
| | LD (HD_0F),A | \$5B76. Store array name. |
| L126D: | PUSH IX | IX points to file header. |
| | POP HL | Retrieve into HL. |
| | INC HL | HL points to filename. |
| | LD DE,N_STR1 | \$5B67. |
| | LD BC,\$000A | |
| | LDIR | Copy the filename. |
| | LD HL,FLAGS3 | \$5B66. |

EDITOR ROUTINES — PART 1

Relist the BASIC Program from the Current Line

This routine lists the BASIC program from the current line number. It initially shows the last line displayed but rows may subsequently be scrolled up until the required BASIC line has been found. The structure of the ROM program only supports listing BASIC lines that are 20 rows or less; larger lines are shown truncated to 20 rows.

| | | |
|--------|--|--|
| L154E: | LD HL,\$EEF5 RES 0,(HL) SET 1,(HL) | Flags. Signal this is not the current line. Signal not yet located the current line. |
|--------|--|--|

A loop is entered to display a screenful of program listing. If the current line number is not found in the lines displayed then all lines are scrolled up and the listing reproduced. This procedure repeats until the current line number has been found and displayed.

| | | |
|--------|--|--|
| L1555: | LD HL,(\$5C49) LD A,H OR L JR NZ,L155F LD (\$EC06),HL | E_PPC. Fetch current line number. Is there a currently selected line? Jump ahead if so. Set to \$0000 to indicate no editable characters before the cursor. |
| L155F: | LD A,(\$F9DB) PUSH AF LD HL,(\$FC9A) CALL L3382 LD (\$F9D7),HL CALL L325A CALL L310E POP AF | Fetch the number of rows of the BASIC line that are in the Above-Screen Line Edit Buffer, i.e. that are off the top of the screen. Line number of the BASIC line at the top of the screen (or 0 for the first line). Find closest line number (or \$0000 if no subsequent line exists). Store the line number of the BASIC line being edited in the buffer. Set default Above-Screen Line Edit Buffer settings. Set default Below-Screen Line Edit Buffer settings. A=Number of rows of the BASIC line that are in the Above-Screen Line Edit Buffer. |
| L1573: | OR A JR Z,L1582 | Are there any rows off the top of the screen? Jump ahead if not. |

The current settings indicate that the top BASIC line straggles into the Above-Screen Line Edit Buffer. It is therefore necessary to insert the current BASIC line into the Below-Screen Line Edit Buffer and then shift the appropriate number of rows into the Above-Screen Line Edit Buffer.

| | |
|--|--|
| PUSH AF CALL L3117 EX DE,HL CALL L32A2 POP AF DEC A JR L1573 | Save the number of rows off the top of the screen. Copy a BASIC line from the program area into the Below-Screen Line Edit Buffer. DE=Address of the Below-Screen Line Edit Buffer. Shift up a row into the Above-Screen Line Edit Buffer. Retrieve the number of rows off the top of the screen. Decrement the number of rows. Jump back to shift up another row if required. |
|--|--|

Either there the top BASIC line does not straggle off the top of the the screen or the appropriate number of rows have been copied into the Above-Screen Line Edit Buffer. In the latter case, the Below-Screen Line Edit Buffer contains the remaining rows of the BASIC line and which be copied into the top of the Screen Line Edit Buffer.

| | | |
|--------|--|--|
| L1582: | LD C,\$00 CALL L30EC LD B,C LD A,(\$EC15) LD C,A PUSH BC PUSH DE | C=Row 0. DE=Start address in Screen Line Edit Buffer of the first row, as specified in C. B=Row 0. The number of editing rows on screen. C=Number of editing rows on screen. B=Row number, C=Number of editing rows on screen. DE=Start address in Screen Line Edit Buffer of the first row. |
|--------|--|--|

Enter a loop to copy BASIC line rows into the Screen Line Edit Buffer. The Below-Screen Line Edit Buffer is used as a temporary store for holding each BASIC line as it is copied into the Screen Line Edit Buffer. If the top BASIC line straggles above the screen then this loop is entered with the remains of the line already in the Below-Screen Line Edit Buffer.

| | | |
|--------|---------------------------------|---|
| L158E: | CALL L3117 LD A,(\$EEF5) | Shift up all rows of the BASIC line in the Below-Screen Line Edit Buffer, or if empty then copy a BASIC line from the program area into it. If no BASIC line available then empty the first row of the Below-Screen Line Edit Buffer. Listing flags. |
|--------|---------------------------------|---|

| LD A,H | |
| OR L | Are there any editable characters in this row prior to the cursor? |
| JR Z,L15DF | Jump if there are none, i.e. cursor at start of the row. |

There are editable characters on this row prior to the cursor **[BUG - Entering ' 10 REM' or '0010 REM' will insert the line into the program area but instead of placing the cursor on the following row it is placed after the following BASIC line, or if the line inserted was the last in the program then the cursor is placed on row 20. The bug occurs due to the leading spaces or zeros, and hence will apply to every BASIC command. When the line is inserted into the Screen Line Edit Buffer, the leading spaces are discarded and hence the line length is shorter than that typed in. However, it is the typed in line length that is used when parsing the BASIC line in the Screen Line Edit Buffer and as a result this causes an attempt to find the remaining characters on the following row of the Screen Line Edit Buffer. If another BASIC line is on the following Screen Line Edit Buffer row then the search completes and the cursor is placed on the row after this BASIC line. If there is not a BASIC line on the following row then the search continues on the next row. Since this will also be empty, the search advances onto the next row, and then the next, and so on until row 20 is reached. To fix the bug, the typed in character count until the cursor (held in \$EC06) ideally needs to be adjusted to match the actual number of characters stored in the Screen Line Edit Buffer. However, this is not a trivial change to implement. A simpler solution to fix the bug is to intercept when a move to the next row is made and to determine whether the BASIC line actually continues on this row. Credit: Paul Farrow] [To fix the bug, the POP HL and JR NC,\$15EA (ROM 0) instructions following the call to \$2E79 (ROM 0) should be replaced with the following. Credit: Paul Farrow.**

| | DEFW L2336 | PLAY routine in ROM 0. |

(From Logan & O'Hara's 48K ROM disassembly):

The requirements for the different command classes are as follows: CLASS-00 - No further operands.

CLASS-01 - Used in LET. A variable is required.

CLASS-02 - Used in LET. An expression, numeric or string, must follow.

CLASS-03 - A numeric expression may follow. Zero to be used in case of default.

CLASS-04 - A single character variable must follow.

CLASS-05 - A set of items may be given.

CLASS-06 - A numeric expression must follow.

CLASS-07 - Handles colour items.

CLASS-08 - Two numeric expressions, separated by a comma, must follow.

CLASS-09 - As for CLASS-08 but colour items may precede the expressions.

CLASS-0A - A string expression must follow.

CLASS-0B - Handles cassette/RAM disk routines.

In addition the 128 adds the following classes:

CLASS-0C - Like class 00 but calling ROM 0. (Used by SPECTRUM, MOVE, COPY, NEW, GO SUB, RETURN)

CLASS-0D - Like class 06 but calling ROM 0. (Used by CLEAR, RUN)

CLASS-0E - Handled in ROM 0. (Used by PLAY, ERASE, CAT, FORMAT, CIRCLE, LPRINT, LLIST, DRAW, DATA, READ, LIST, DIM, INPUT, PRINT, FOR, IF)

The 'Main Parser' Of the BASIC Interpreter

The parsing routine of the BASIC interpreter is entered at \$17CE (ROM 0) when syntax is being checked, and at \$1857 (ROM 0) when a BASIC program of one or more statements is to be executed.

This code is similar to that in ROM 1 at \$1B17.

| | | |
|--------|-----------------|---|
| L17CE: | RES 7,(IY+\$01) | FLAGS. Signal 'syntax checking'. |
| | RST 28H | |
| | DEFW E_LINE_NO | \$19FB. CH-ADD is made to point to the first code after any line number |
| | XOR A | |
| | LD (\$5C47),A | SUBPPC. Set to \$00. |
| | DEC A | |
| | LD (\$5C3A),A | ERR_NR. Set to \$FF. |
| | JR L17E0 | Jump forward to consider the first statement of the line. |

The Statement Loop

Each statement is considered in turn until the end of the line is reached.

| | | |
|--------|---------------|---|
| L17DF: | RST 20H | Advance CH-ADD along the line. |
| L17E0: | RST 28H | |
| | DEFW SET_WORK | \$16BF. The work space is cleared. |
| | INC (IY+\$0D) | SUBPPC. Increase SUBPPC on each passage around the loop. |
| | JP M,L1931 | Only '127' statements are allowed in a single line. Jump to report "C Nonsense in BASIC". |
| | RST 18H | Fetch a character. |
| | LD B,\$00 | Clear the register for later. |
| | CP \$0D | Is the character a 'carriage return'? |
| | JP Z,L1882 | jump if it is. |
| | CP ':' | \$3A. Go around the loop again if it is a ':'. |
| | JR Z,L17DF | |

A statement has been identified so, first, its initial command is considered

| | | |
|--------|-------------|---|
| | LD HL,L1840 | Pre-load the machine stack with the return address. |
| | PUSH HL | |
| | LD C,A | Save the command temporarily |
| | RST 20H | in the C register whilst CH-ADD is advanced again. |
| | LD A,C | |
| | SUB \$CE | Reduce the command's code by \$CE giving the range indexed from \$00. |
| | JR NC,L1813 | Jump for DEF FN and above. |
| | ADD A,\$CE | |
| | LD HL,L17C8 | |
| | CP \$A3 | Is it 'SPECTRUM'? |
| | JR Z,L181F | Jump if so into the scanning loop with this address. |
| | LD HL,L17CB | |
| | CP \$A4 | Is it 'PLAY'? |
| | JR Z,L181F | Jump if so into the scanning loop with this address. |
| | JP L1931 | Produce error report "C Nonsense in BASIC". |
| L1813: | LD C,A | Move the command code to BC (B holds \$00). |
| | LD HL,L16FB | The base address of the syntax offset table. |
| | ADD HL,BC | |
| | LD C,(HL) | |
| | ADD HL,BC | Find address for the command's entries in the parameter table. |
| | JR L181F | Jump forward into the scanning loop with this address. |

Each of the command class routines applicable to the present command are executed in turn.

Any required separators are also considered.

| | | |
|--------|----------------|---|
| L181C: | LD HL,(\$5C74) | T_ADDR. The temporary pointer to the entries in the parameter table. |
| L181F: | LD A,(HL) | Fetch each entry in turn. |
| | INC HL | Update the pointer to the entries for the next pass. |
| | LD (\$5C74),HL | T_ADDR. |
| | LD BC,L181C | Pre-load the machine stack with the return address. |
| | PUSH BC | |
| | LD C,A | Copy the entry to the C register for later. |
| | CP \$20 | |
| | JR NC,L1839 | Jump forward if the entry is a 'separator'. |
| | LD HL,L18D4 | The base address of the 'command class' table. |
| | LD B,\$00 | |
| | ADD HL,BC | Index into the table. |
| | LD C,(HL) | |
| | ADD HL,BC | HL=base + code + (base + code). |
| | PUSH HL | HL=The starting address of the required command class routine. |
| | RST 18H | Before making an indirect jump to the command class routine pass the command code |
| | DEC B | to the A register and set the B register to \$FF. |
| | RET | Return to the stacked address. |

The 'Separator' Subroutine

The report 'Nonsense in BASIC' is given if the required separator is not present.

But note that when syntax is being checked the actual report does not appear on the screen - only the 'error marker'.

This code is similar to that in ROM 1 at \$1B6F.

| | | |
|--------|-------------|---|
| L1839: | RST 18H | The current character is |
| | CP C | fetches and compared to the entry in the parameter table. |
| | JP NZ,L1931 | Give the error report if there is not a match. |
| | RST 20H | Step past a correct character |
| | RET | and return. |

The 'Statement Return' Subroutine

After the correct interpretation of a statement, a return is made to this entry point.

This code is similar to that in ROM 1 at \$1B76.

| | | |
|--------|---|--|
| L1840: | CALL L05F5 JR C,L1849 CALL L05CB DEFB \$14 | Check for BREAK Jump if pressed. Produce error report. "L Break into program" |
| L1849: | BIT 7,(IY+\$0A) JP NZ,L18C7 LD HL,(\$5C42) BIT 7,H JR Z,L186B | NSPPC - statement number in line to be jumped to Jump forward if there is not a 'jump' to be made. NEWPPC, line number to be jumped to. Jump forward unless dealing with a further statement in the editing area. |

The 'Line Run' Entry Point

This entry point is used wherever a line in the editing area is to be 'run'.

In such a case the syntax/run flag (bit 7 of FLAGS) will be set.

The entry point is also used in the syntax checking of a line in the editing area that has more than one statement (bit 7 of FLAGS will be reset).

This code is similar to that in ROM 1 at \$1B8A.

| | | |
|--------|---|---|
| L1857: | LD HL,\$FFFE LD (\$5C45),HL LD HL,(\$5C61) DEC HL LD DE,(\$5C59) DEC DE LD A,(\$5C44) JR L18A1 | A line in the editing area is considered as line '-2'. PPC. WORKSP. Make HL point to the end marker of the editing area. E_LINE. Make DE point to the location before the end marker of the editing area. NSPPC. Fetch the number of the next statement to be handled. Jump forward. |
|--------|---|---|

The 'Line New' Subroutine

There has been a jump in the program and the starting address of the new line has to be found.

This code is similar to that in ROM 1 at 1B9E.

| | | |
|--------|--|--|
| L186B: | RST 28H DEFW LINE_ADDR LD A,(\$5C44) JR Z,L188F AND A JR NZ,L18BC LD B,A LD A,(HL) AND \$C0 LD A,B JR Z,L188F CALL L05CB DEFB \$FF | \$196E. The starting address of the line, or the 'first line after' is found. NSPPC. Collect the statement number. Jump forward if the required line was found. Check the validity of the statement number - must be zero. Jump if not to produce error report "N Statement lost". Also check that the 'first line after' is not after the actual 'end of program'. Jump forward with valid addresses; otherwise signal the error 'OK'. Produce error report. "0 OK" |
|--------|--|--|

REM Routine

The return address to STMT-RET is dropped which has the effect of forcing the rest of the line to be ignored.

This code is similar to that in ROM 1 at \$1BB2.

| | | |
|--------|--------|------------------------------------|
| L1881: | POP BC | Drop the statement return address. |
|--------|--------|------------------------------------|

The 'Line End' Routine

If checking syntax a simple return is made but when 'running' the address held by NXTLIN has to be checked before it can be used.

This code is similar to that in ROM 1 at \$1BB3.

| | | |
|--------|---|---|
| L1882: | BIT 7,(IY+\$01) RET Z LD HL,(\$5C55) LD A,\$C0 AND (HL) | Return if syntax is being checked. NXTLIN. Return if the address is after the end of the program - the 'run' is finished. |
|--------|---|---|

RET NZ
XOR A

Signal 'statement zero' before proceeding.

The 'Line Use' Routine

This routine has three functions:

- Change statement zero to statement '1'.
- Find the number of the new line and enter it into PPC.
- Form the address of the start of the line after.

This code is similar to that in ROM 1 at \$1BBF.

| | | |
|--------|----------------|---|
| L188F: | CP \$01 | Statement zero becomes statement 1. |
| | ADC A,\$00 | |
| | LD D,(HL) | The line number of the line to be used is collected and |
| | INC HL | passed to PPC. |
| | LD E,(HL) | |
| | LD (\$5C45),DE | PPC. |
| | INC HL | |
| | LD E,(HL) | Now find the 'length' of the line. |
| | INC HL | |
| | LD D,(HL) | |
| | EX DE,HL | Switch over the values. |
| | ADD HL,DE | Form the address of the start of the line after in HL and the |
| | INC HL | location before the 'next' line's first character in DE. |

The 'Next Line' Routine

On entry the HL register pair points to the location after the end of the 'next' line to be handled and the DE register pair to the location before the first character of the line.

This applies to lines in the program area and also to a line in the editing area - where the next line will be the same line again whilst there are still statements to be interpreted.

This code is similar to that in ROM 1 at \$1BD1.

| | | |
|--------|-------------------|--|
| L18A1: | LD (\$5C55),HL | NXTLIN. Set NXTLIN for use once the current line has been completed. |
| | EX DE,HL | |
| | LD (\$5C5D),HL | CH_ADD. CH_ADD points to the location before the first character to be considered. |
| | LD D,A | The statement number is fetched. |
| | LD E,\$00 | The E register is cleared in case the 'Each Statement' routine is used. |
| | LD (IY+\$0A),\$FF | NSPPC. Signal 'no jump'. |
| | DEC D | |
| | LD (IY+\$0D),D | SUB_PPC. Statement number-1. |
| | JP Z,L17DF | Jump if the first statement. |
| | INC D | For later statements the 'starting address' has to be found. |
| | RST 28H | |
| | DEFW EACH_STMT | \$198B. |
| | JR Z,L18C7 | Jump forward unless the statement does not exist. |
| L18BC: | CALL L05CB | Produce error report. |
| | DEFB \$16 | "N Statement lost" |

The 'CHECK-END' Subroutine

This is called when the syntax of the edit-line is being checked. The purpose of the routine is to give an error report if the end of a statement has not been reached and to move on to the next statement if the syntax is correct.

The routine is the equivalent of routine CHECK_END in ROM 1 at \$1BEE.

| | | |
|--------|-----------------|--|
| L18C0: | BIT 7,(IY+\$01) | Very like CHECK-END at 1BEE in ROM 1 |
| | RET NZ | Return unless checking syntax. |
| | POP BC | Drop scan loop and statement return addresses. |
| | POP BC | |

The 'STMT-NEXT' Routine

If the present character is a 'carriage return' then the 'next statement' is on the 'next line', if ':' it is on the same line; but if any other character is found then there is an error in syntax.

The routine is the equivalent of routine STMT_NEXT in ROM 1 at \$1BF4.

| | | |
|--------|------------|---|
| L18C7: | RST 18H | Fetch the present character. |
| | CP \$0D | Consider the 'next line' if |
| | JR Z,L1882 | it is a 'carriage return'. |
| | CP ':' | \$3A. Consider the 'next statement' |
| | JP Z,L17DF | if it is a ':'. |
| | JP L1931 | Otherwise there has been a syntax error so produce "C Nonsense in BASIC". |

The 'Command Class' Table

| | | |
|--------|---------------|--------------------------|
| L18D4: | DEFB L18F8-\$ | CLASS-00 -> L18D9 = \$24 |
| | DEFB L1918-\$ | CLASS-01 -> L18F9 = \$43 |
| | DEFB L191C-\$ | CLASS-02 -> L18FD = \$46 |
| | DEFB L18F5-\$ | CLASS-03 -> L18D6 = \$1E |
| | DEFB L1924-\$ | CLASS-04 -> L1905 = \$4C |
| | DEFB L18F9-\$ | CLASS-05 -> L18DA = \$20 |
| | DEFB L192D-\$ | CLASS-06 -> L190E = \$53 |
| | DEFB L1939-\$ | CLASS-07 -> L191A = \$5E |
| | DEFB L1929-\$ | CLASS-08 -> L190A = \$4D |
| | DEFB L1963-\$ | CLASS-09 -> L1944 = \$86 |
| | DEFB L1935-\$ | CLASS-0A -> L1916 = \$57 |
| | DEFB L1967-\$ | CLASS-0B -> L1948 = \$88 |
| | DEFB L18E6-\$ | CLASS-0C -> L18C7 = \$06 |
| | DEFB L18E3-\$ | CLASS-0D -> L18C4 = \$02 |
| | DEFB L18E7-\$ | CLASS-0E -> L18C8 = \$05 |

The 'Command Classes — 0C, 0D & 0E'

For commands of class-0D a numeric expression must follow.

| | | |
|--------|----------------|----------------------|
| L18E3: | RST 28H | Code 0D enters here. |
| | DEFW FETCH_NUM | \$1CDE. |

The commands of class-0C must not have any operands. e.g. SPECTRUM.

| | | |
|--------|------|-------------------------------------|
| L18E6: | CP A | Code 0C enters here. Set zero flag. |
|--------|------|-------------------------------------|

The commands of class-0E may be followed by a set of items. e.g. PLAY.

| | | |
|--------|--------------|---|
| L18E7: | POP BC | Code 0E enters here. Retrieve return address. |
| | CALL Z,L18C0 | If handling commands of classes 0C & 0D and syntax is being checked move on |
| | | now to consider the next statement. |
| | EX DE,HL | Save the line pointer in DE. |

After the command class entries and the separator entries in the parameter table have been considered the jump to the appropriate command routine is made.

The routine is similar to JUMP-C-R in ROM 1 at \$1C16.

| | |
|----------------|---|
| LD HL,(\$5C74) | T_ADDR. |
| LD C,(HL) | Fetch the pointer to the entries in the parameter table |
| INC HL | and fetch the address of the |
| LD B,(HL) | required command routine. |
| EX DE,HL | Exchange the pointers back. |
| PUSH BC | Make an indirect jump to the command routine. |
| RET | |

The 'Command Classes — 00, 03 & 05'

These routines are the equivalent of the routines in ROM 1 starting at \$1C0D.

The commands of class-03 may, or may not, be followed by a number. e.g. RUN & RUN 200.

L18F5: RST 28H Code 03 enters here.
 DEFW FETCH_NUM \$1CDE. A number is fetched but zero is used in cases of default.

The commands of class-00 must not have any operands. e.g. COPY & CONTINUE.

L18F8: CP A Code 00 enters here. Set the zero flag.

The commands of class-05 may be followed by a set of items. e.g. PRINT & PRINT "222".

L18F9: POP BC Code 05 enters here. Drop return address.
 CALL Z,L18C0 If handling commands of classes 00 & 03 and syntax is being checked move on now
 to consider the next statement.
 EX DE,HL Save the line pointer in DE.
 LD HL,(\$C74) T_ADDR. Fetch the pointer to the entries in the parameter table.
 LD C,(HL)
 INC HL
 LD B,(HL) Fetch the address of the required command routine.
 EX DE,HL Exchange the pointers back.
 PUSH HL Save command routine address.
 LD HL,L1917 The address to return to (the RET below).
 LD (RETADDR),HL \$5B5A. Store the return address.
 LD HL,YOUNGER \$5B14. Paging subroutine.
 EX (SP),HL Replace the return address with the address of the YOUNGER routine.
 PUSH HL Save the original top stack item.
 LD H,B
 LD L,C HL=Address of command routine.
 EX (SP),HL Put onto the stack so that an indirect jump will be made to it.
 JP SWAP \$5B00. Switch to other ROM and 'return' to the command routine.

Comes here after ROM 1 has been paged in, the command routine called, ROM 0 paged back in.

L1917: RET Simply make a return.

The 'Command Class — 01'

Command class 01 is concerned with the identification of the variable in a LET, READ or INPUT statement.

L1918: RST 28H Delegate handling to ROM 1.
 DEFW CLASS_01 \$1C1F.
 RET

The 'Command Class — 02'

Command class 02 is concerned with the actual calculation of the value to be assigned in a LET statement.

L191C: POP BC Code 02 enters here. Delegate handling to ROM 1.
 RST 28H
 DEFW VAL_FET_1 \$1C56. "... used by LET, READ and INPUT statements to first evaluate and then
 assign values to the previously designated variable" (Logan/O'Hara)
 CALL L18C0 Move on to the next statement if checking syntax
 RET else return here.

The 'Command Class — 04'

The command class 04 entry point is used by FOR & NEXT statements.

| | | |
|--------|---------------------------------|---|
| L1924: | RST 28H DEFW CLASS_04 RET | Code 04 enters here. Delegate handling to ROM 1. \$1C6C. |
|--------|---------------------------------|---|

The 'Command Class — 08'

Command class 08 allows for two numeric expressions, separated by a comma, to be evaluated.

| | | |
|--------|----------------------------------|--|
| L1928: | RST 20H | [Redundant byte] |
| L1929: | RST 28H DEFW EXPT_2NUM RET | Delegate handling to ROM 1. \$1C7A. |

The 'Command Class — 06'

Command class 06 allows for a single numeric expression to be evaluated.

| | | |
|--------|----------------------------------|---|
| L192D: | RST 28H DEFW EXPT_1NUM RET | Code 06 enters here. Delegate handling to ROM 1. \$1C82. |
|--------|----------------------------------|---|

Report C — Nonsense in BASIC

| | | |
|--------|-----------------------------|--|
| L1931: | CALL L05CB DEFB \$0B | Produce error report. [Could have saved 4 bytes by using the identical routine at \$1238 (ROM 0) instead] "C Nonsense in BASIC" |
|--------|-----------------------------|--|

The 'Command Class — 0A'

Command class 0A allows for a single string expression to be evaluated.

| | | |
|--------|---------------------------------|---|
| L1935: | RST 28H DEFW EXPT_EXP RET | Code 0A enters here. Delegate handling to ROM 1. \$1C8C. |
|--------|---------------------------------|---|

The 'Command Class — 07'

Command class 07 is the command routine for the six colour item commands.

Makes the current temporary colours permanent.

| | | |
|--------|--|--|
| L1939: | BIT 7,(IY+\$01) RES 0,(IY+\$02) JR Z,L1946 RST 28H DEFW TEMPS | The syntax/run flag is read. TV_FLAG. Signal 'main screen'. Jump ahead if syntax checking. Only during a 'run' call TEMPS to ensure the temporary \$0D4D. colours are the main screen colours. |
| L1946: | POP AF LD A,(\$5C74) SUB (L179E & \$00FF)+\$28 RST 28H DEFW CO_TEMP_4 CALL L18C0 LD HL,(\$5C8F) LD (\$5C8D),HL LD HL,\$5C91 LD A,(HL) | Drop the return address. T_ADDR. Reduce to range \$D9-\$DE which are the token codes for INK to OVER. \$21FC. Change the temporary colours as directed by the BASIC statement. Move on to the next statement if checking syntax. ATTR_T. Now the temporary colour ATTR_P. values are made permanent P_FLAG. Value of P_FLAG also has to be considered. |

The following instructions cleverly copy the even bits of the supplied byte to the odd bits.
In effect making the permanent bits the same as the temporary ones.

| | |
|-----------|---------------------------|
| RLCA | Move the mask leftwards. |
| XOR (HL) | Impress onto the mask |
| AND \$AA | only the even bits of the |
| XOR (HL) | other byte. |
| LD (HL),A | Restore the result. |
| RET | |

The 'Command Class — 09'

This routine is used by PLOT, DRAW & CIRCLE statements in order to specify the default conditions of 'FLASH 8; BRIGHT 8; PAPER 8;' that are set up before any embedded colour items are considered.

| | | |
|--------|---------------|--|
| L1963: | RST 28H | Code 09 enters here. Delegate handling to ROM 1. |
| | DEFW CLASS_09 | \$1CBE. |
| | RET | |

The 'Command Class — 0B'

This routine is used by SAVE, LOAD, VERIFY & MERGE statements.

| | | |
|--------|------------------------|--|
| L1967: | POP AF | Drop the return address. |
| | LD A,(FLAGS3) | \$5B66. |
| | AND \$0F | Clear LOAD/SAVE/VERIFY/MERGE indication bits. |
| | LD (FLAGS3),A | \$5B66. |
| | LD A,(\$5C74) | T_ADDR-lo. |
| | SUB 1+(L1792 & \$00FF) | Correct by \$74 so that SAVE = \$00, LOAD = \$01, VERIFY = \$02, MERGE = \$03. |
| | LD (\$5C74),A | T_ADDR-lo. |
| | JP Z,L120A | Jump to handle SAVE. |
| | DEC A | |
| | JP Z,L1211 | Jump to handle LOAD. |
| | DEC A | |
| | JP Z,L1218 | Jump to handle VERIFY. |
| | JP L121F | Jump to handle MERGE. |

IF Routine

On entry the value of the expression between the IF and the THEN is the 'last value' on the calculator stack. If this is logically true then the next statement is considered; otherwise the line is considered to have been finished.

| | | |
|--------|-----------------|----------------------------------|
| L1986: | POP BC | Drop the return address. |
| | BIT 7,(IY+\$01) | |
| | JR Z,L199D | Jump forward if checking syntax. |

Now 'delete' the last value on the calculator stack

| | | |
|--------|----------------|--|
| L198D: | LD HL,(\$5C65) | STKEND. |
| | LD DE,\$FFFB | -5 |
| | ADD HL,DE | The present 'last value' is deleted. |
| | LD (\$5C65),HL | STKEND. HL point to the first byte of the value. |
| | RST 28H | |
| | DEFW TEST_ZERO | \$34E9. Is the value zero? |
| | JP C,L1882 | If the value was 'FALSE' jump to the next line. |
| L199D: | JP L17E0 | But if 'TRUE' jump to the next statement (after the THEN). |

FOR Routine

This command routine is entered with the VALUE and the LIMIT of the FOR statement already on the top of the calculator stack.

| | | |
|--------|-------------|--|
| L19A0: | CP \$CD | Jump forward unless a 'STEP' is given. |
| | JR NZ,L19AD | |
| | RST 20H | Advance pointer |

SPANISH SPECTRUM +2 ROM 0 DISASSEMBLY

| | |
|------------|--|
| CALL L192D | Indirectly call EXPT_1NUM in ROM 1 to get the value of the STEP. |
| CALL L18C0 | Move on to the next statement if checking syntax. |
| JR L19C5 | Otherwise jump forward. |

There has not been a STEP supplied so the value '1' is to be used.

| | | |
|--------|----------------|---|
| L19AD: | CALL L18C0 | Move on to the next statement if checking syntax. |
| | LD HL,(\$5C65) | STKEND. |
| | LD (HL),\$00 | |
| | INC HL | |
| | LD (HL),\$00 | |
| | INC HL | |
| | LD (HL),\$01 | |
| | INC HL | |
| | LD (HL),\$00 | |
| | INC HL | |
| | LD (HL),\$00 | Place a value of 1 on the calculator stack. |
| | INC HL | |
| | LD (\$5C65),HL | STKEND. |

The three values on the calculator stack are the VALUE (v), the LIMIT (l) and the STEP (s).
These values now have to be manipulated. Delegate handling to ROM 1.

| | | |
|--------|----------------|---------|
| L19C5: | RST 28H | |
| | DEFW F_REORDER | \$1D16. |
| | RET | |

READ Routine

| | | |
|--------|-----------------|---|
| L19C9: | RST 20H | Come here on each pass, after the first, to move along the READ statement. |
| L19CA: | CALL L1918 | Indirectly call CLASS_01 in ROM 1 to consider whether the variable has been used before, and find the existing entry if it has. |
| | BIT 7,(IY+\$01) | |
| | JR Z,L1A01 | Jump forward if checking syntax. |
| | RST 18H | Save the current pointer CH_ADD in X_PTR. |
| | LD (\$5C5F),HL | X_PTR. |
| | LD HL,(\$5C57) | DATADD. |
| | LD A,(HL) | Fetch the current DATA list pointer |
| | CP \$2C | and jump forward unless a new |
| | JR Z,L19EA | DATA statement has to be found. |
| | LD E,\$E4 | The search is for 'DATA'. |
| | RST 28H | |
| | DEFW LOOK_PROG | \$1D86. |
| | JR NC,L19EA | Jump forward if the search is successful. |
| | CALL L05CB | Produce error report. |
| | DEFB \$0D | "E Out of Data" |

Pick up a value from the DATA list.

| | | |
|--------|-------------------|--|
| L19EA: | INC HL | Advance the pointer along the DATA list. |
| | LD (\$5C5D),HL | CH_ADD. |
| | LD A,(HL) | |
| | RST 28H | |
| | DEFW VAL_FET_1 | \$1C56. Fetch the value and assign it to the variable. |
| | RST 18H | |
| | LD (\$5C57),HL | DATADD. |
| | LD HL,(\$5C5F) | X_PTR. Fetch the current value of CH_ADD and store it in DATADD. |
| | LD (IY+\$26),\$00 | X_PTR_hi. Clear the address of the character after the '?' marker. |
| | LD (\$5C5D),HL | CH_ADD. Make CH-ADD once again point to the READ statement. |
| | LD A,(HL) | |
| L1A01: | RST 18H | GET the present character |
| | CP ',' | \$2C. Check if it is a ','. |
| L1A04: | JR Z,L19C9 | If it is then jump back as there are further items. |

| | |
|------------|---------------------------------|
| CALL L18C0 | Return if checking syntax |
| RET | or here if not checking syntax. |

DATA Routine

During syntax checking a DATA statement is checked to ensure that it contains a series of valid expressions, separated by commas. But in 'run-time' the statement is passed by.

| | | |
|--------|-----------------|--------------------------------------|
| L1A0A: | BIT 7,(IY+\$01) | Jump forward unless checking syntax. |
| | JR NZ,L1A1B | |

A loop is now entered to deal with each expression in the DATA statement.

| | | |
|--------|---------------|---|
| L1A10: | RST 28H | |
| | DEFW SCANNING | \$24FB. Scan the next expression. |
| | CP ',' | \$2C. Check for the correct separator ','. |
| | CALL NZ,L18C0 | but move on to the next statement if not matched. |
| | RST 20H | Whilst there are still expressions to be checked |
| | JR L1A10 | go around again. |

The DATA statement has to be passed-by in 'run-time'.

| | | |
|--------|-----------|---|
| L1A1B: | LD A,\$E4 | It is a 'DATA' statement that is to be passed-by. |
|--------|-----------|---|

On entry the A register will hold either the token 'DATA' or the token 'DEF FN' depending on the type of statement that is being 'passed-by'.

| | | |
|--------|--------------|-------------------------------------|
| L1A1D: | RST 28H | |
| | DEFW PASS_BY | \$1E39. Delegate handling to ROM 1. |
| | RET | |

RUN Routine

The parameter of the RUN command is passed to NEWPPC by calling the GO TO command routine. The operations of 'RESTORE 0' and 'CLEAR 0' are then performed before a return is made.

| | | |
|--------|---------------|-------------------------------------|
| L1A21: | RST 28H | |
| | DEFW GO_TO | \$1E67. |
| | LD BC,\$0000 | Now perform a 'RESTORE 0'. |
| | RST 28H | |
| | DEFW REST_RUN | \$1E45. |
| | JR L1A2F | Exit via the CLEAR command routine. |

CLEAR Routine

This routine allows for the variables area to be cleared, the display area cleared and RAMTOP moved. In consequence of the last operation the machine stack is rebuilt thereby having the effect of also clearing the GO SUB stack.

| | | |
|--------|----------------|--|
| L1A2C: | RST 28H | |
| | DEFW FIND_INT2 | \$1E99. Fetch the operand - using zero by default. |
| L1A2F: | LD A,B | Jump forward if the operand is |
| | OR C | other than zero. When called |
| | JR NZ,L1A37 | from RUN there is no jump. |
| | LD BC,(\$5CB2) | RAMTOP. Use RAMTOP if the parameter is 0. |
| L1A37: | PUSH BC | BC = Address to clear to. Save it. |
| | LD DE,(\$5C4B) | VARs. |
| | LD HL,(\$5C59) | E LINE. |
| | DEC HL | |
| | RST 28H | Delete the variables area. |
| | DEFW RECLAIM | \$19E5. |
| | RST 28H | Clear the screen |
| | DEFW CLS | \$0D6B. |

SPANISH SPECTRUM +2 ROM 0 DISASSEMBLY

The value in the BC register pair which will be used as RAMTOP is tested to ensure it is neither too low nor too high.

| | | |
|--------|----------------|---|
| | LD HL,(\$5C65) | STKEND. The current value of STKEND |
| | LD DE,\$0032 | is increased by 50 before |
| | ADD HL,DE | being tested. This forms the |
| | POP DE | ADE = address to clear to lower limit. |
| | SBC HL,DE | |
| | JR NC,L1A5A | Ramtop no good. |
| | LD HL,(\$5CB4) | P_RAMT. For the upper test the value |
| | AND A | for RAMTOP is tested against P_RAMT. |
| | SBC HL,DE | |
| | JR NC,L1A5E | Jump forward if acceptable. |
| L1A5A: | CALL L05CB | Produce error report. |
| | DEFB \$15 | "M Ramtop no good" |
| L1A5E: | LD (\$5CB2),DE | RAMTOP. |
| | POP DE | Retrieve interpreter return address from stack |
| | POP HL | Retrieve 'error address' from stack |
| | POP BC | Retrieve the GO SUB stack end marker. [BUG] - It is assumed that the top of the GO SUB stack will be empty and hence only contain the end marker. This will not be the case if CLEAR is used within a subroutine, in which case BC will now hold the calling line number and this will be stacked in place of the end marker. When a RETURN command is encountered, the GO SUB stack appears to contain an entry since the end marker was not the top item. An attempt to return is therefore made. The CLEAR command handler within the 48K Spectrum ROM does not make any assumption about the contents of the GO SUB stack and instead always re-inserts the end marker. The bug could be fixed by inserting the line LD BC,\$3E00 after the POP BC. Credit: Ian Collier (+3), Paul Farrow (128)] |
| | LD SP,(\$5CB2) | RAMTOP. |
| | INC SP | |
| | PUSH BC | Stack the GO SUB stack end marker. |
| | PUSH HL | Stack 'error address'. |
| | LD (\$5C3D),SP | ERR_SP. |
| | PUSH DE | Stack the interpreter return address. |
| | RET | |

GO SUB Routine

The present value of PPC and the incremented value of SUBPPC are stored on the GO SUB stack.

| | | |
|--------|----------------|--|
| L1A72: | POP DE | Save the return address. |
| | LD H,(IY+\$0D) | SUBPPC. Fetch the statement number and increment it. |
| | INC H | |
| | EX (SP),HL | Exchange the 'error address' with the statement number. |
| | INC SP | Reclaim the use of a location. |
| | LD BC,(\$5C45) | PPC. |
| | PUSH BC | Next save the present line number. |
| | PUSH HL | Return the 'error address' to the machine stack |
| | LD (\$5C3D),SP | ERR-SP. and reset ERR-SP to point to it. |
| | PUSH DE | Stack the return address. |
| | RST 28H | |
| | DEFW GO_TO | \$1E67. Now set NEWPPC & NSPPC to the required values. |
| | LD BC,\$0014 | But before making the jump make a test for room. |
| | RST 28H | |
| | DEFW TEST_ROOM | \$1F05. Will automatically produce error '4' if out of memory. |
| | RET | |

RETURN Routine

The line number and the statement number that are to be made the object of a 'return' are fetched from the GO SUB stack.

| | | |
|--------|--------|---|
| L1A8E: | POP BC | Fetch the return address. |
| | POP HL | Fetch the 'error address'. |
| | POP DE | Fetch the last entry on the GO SUB stack. |
| | LD A,D | The entry is tested to see if |

| | | |
|--------|----------------|---|
| | CP \$3E | it is the GO SUB stack end marker. |
| | JR Z,L1AA5 | Jump if it is. |
| | DEC SP | The full entry uses three locations only. |
| | EX (SP),HL | Exchange the statement number with the 'error address'. |
| | EX DE,HL | Move the statement number. |
| | LD (\$5C3D),SP | ERR_SP. Reset the error pointer. |
| | PUSH BC | Replace the return address. |
| | LD (\$5C42),HL | NEWPPC. Enter the line number. |
| | LD (IY+\$0A),D | NSPPC. Enter the statement number. |
| | RET | |
| L1AA5: | PUSH DE | Replace the end marker and |
| | PUSH HL | the 'error address'. |
| | CALL L05CB | Produce error report. |
| | DEFB \$06 | "7 RETURN without GO SUB" |

DEF FN Routine

During syntax checking a DEF FN statement is checked to ensure that it has the correct form.
Space is also made available for the result of evaluating the function.
But in 'run-time' a DEF FN statement is passed-by.

| | | |
|--|-----------------|---|
| L1AAB: | BIT 7,(IY+\$01) | |
| | JR Z,L1AB6 | Jump forward if checking syntax. |
| | LD A,\$CE | Otherwise pass-by the |
| | JP L1A1D | 'DEF FN' statement. |
| First consider the variable of the function. | | |
| L1AB6: | SET 6,(IY+\$01) | Signal 'a numeric variable'. |
| | RST 28H | |
| | DEFW ALPHA | \$2C8D. Check that the present code is a letter. |
| | JR NC,L1AD5 | Jump forward if not. |
| | RST 20H | Fetch the next character. |
| | CP '\$' | \$24. |
| | JR NZ,L1AC9 | Jump forward unless it is a '\$'. |
| | RES 6,(IY+\$01) | Change bit 6 as it is a string variable. |
| | RST 20H | Fetch the next character. |
| L1AC9: | CP '(' | \$28. A '(' must follow the variable's name. |
| | JR NZ,L1B09 | Jump forward if not. |
| | RST 20H | Fetch the next character |
| | CP ')' | \$29. Jump forward if it is a ')' as there are no parameters of the function. |
| | JR Z,L1AF2 | |

A loop is now entered to deal with each parameter in turn.

| | | |
|--------|----------------|--|
| L1AD2: | RST 28H | |
| | DEFW ALPHA | \$2C8D. |
| L1AD5: | JP NC,L1931 | The present code must be a letter. |
| | EX DE,HL | Save the pointer in DE. |
| | RST 20H | Fetch the next character. |
| | CP '\$' | \$24. |
| | JR NZ,L1AE0 | Jump forward unless it is a '\$'. |
| | EX DE,HL | Otherwise save the new pointer in DE instead. |
| | RST 20H | Fetch the next character. |
| L1AE0: | EX DE,HL | Move the pointer to the last character of the name to HL. |
| | LD BC,\$0006 | Now make six locations after that last character. |
| | RST 28H | |
| | DEFW MAKE_ROOM | \$1655. |
| | INC HL | |
| | INC HL | |
| | LD (HL),\$0E | Enter a 'number marker' into the first of the new locations. |
| | CP ',' | \$2C. If the present character is a ',' then jump back as |
| | JR NZ,L1AF2 | there should be a further parameter. |
| | RST 20H | |
| | JR L1AD2 | Otherwise jump out of the loop. |

Next the definition of the function is considered.

| | | |
|--------|---------------|---|
| L1AF2: | CP ')' | \$29. Check that the ')' does exist. |
| | JR NZ,L1B09 | Jump if not. |
| | RST 20H | The next character is fetched. |
| | CP '=' | \$3D. It must be an '='. |
| | JR NZ,L1B09 | Jump if not. |
| | RST 20H | Fetch the next character. |
| | LD A,(\$5C3B) | FLAGS. |
| | PUSH AF | Save the nature (numeric or string) of the variable |
| | RST 28H | |
| | DEFW SCANNING | \$24FB. Now consider the definition as an expression. |
| | POP AF | Fetch the nature of the variable. |
| | XOR (IY+\$01) | FLAGS. Check that it is of the same type |
| | AND \$40 | as found for the definition. |
| L1B09: | JP NZ,L1931 | Give an error report if required. |
| | CALL L18C0 | Move on to consider the next statement in the line. |

MOVE Routine

| | | |
|--------|-----|----------------|
| L1B0F: | RET | Simply return. |
|--------|-----|----------------|

MENU ROUTINES — PART 1

Run Tape Loader

Used by Main Menu - Tape Loader option.

| | | |
|--------|----------------|--|
| L1B10: | LD HL,\$EC0E | Fetch mode. |
| | LD (HL),\$FF | Set Tape Loader mode. |
| | CALL L1F3F | Use Normal RAM Configuration (physical RAM bank 0). |
| | RST 28H | |
| | DEFW SET_MIN | \$16B0. Clear out editing area. |
| | LD HL,(\$5C59) | E_LINE. |
| | LD BC,\$0003 | Create 3 bytes of space for the LOAD "" command. |
| | RST 28H | |
| | DEFW MAKE_ROOM | \$1655. |
| | LD HL,L1B8D | Address of command bytes for LOAD "". |
| | LD DE,(\$5C59) | E_LINE. |
| | LD BC,\$0003 | |
| | LDIR | Copy LOAD "" into the line editing area. |
| | CALL L026B | Parse and execute the BASIC line. [Will not return here but will exit via the error handler routine] |

List Program to Printer

Used by Edit Menu - Print option.

| | | |
|--------|----------------|--|
| L1B33: | CALL L1F3F | Use Normal RAM Configuration (physical RAM bank 0). |
| | RST 28H | |
| | DEFW SET_MIN | \$16B0. Clear out editing area. |
| | LD HL,(\$5C59) | E_LINE. |
| | LD BC,\$0001 | Create 1 byte of space. |
| | RST 28H | |
| | DEFW MAKE_ROOM | \$1655. |
| | LD HL,(\$5C59) | E_LINE. |
| | LD (HL),\$E1 | Copy LLIST into the line editing area. |
| | CALL L026B | Parse and execute the BASIC line. [Will not return here but will exit via the error handler routine] |

BASIC LINE AND COMMAND INTERPRETATION ROUTINES — PART 2

SPECTRUM Routine

Return to 48K BASIC Mode. This routine will force caps lock is off.

| | | |
|--------|------------------------|--|
| L1B4A: | CALL L1B72 | Overwrite 'P' channel data to use the ZX Printer. |
| | LD SP,(\$5C3D) | ERR_SP. Purge the stack. |
| | POP HL | Remove error handler address. |
| | LD HL,MAIN_4 | \$1303. The main execution loop within ROM 1. |
| | PUSH HL | |
| | LD HL,PRINT_A_1+\$0003 | \$0013. Address of a \$FF byte within ROM 1, used to generate error report "0 OK". |
| | PUSH HL | |
| | LD HL,ERROR_1 | \$0008. The address of the error handler within ROM 1. |
| | PUSH HL | |

[BUG - Although the channel 'P' information has been reconfigured to use the ZX Printer, the ZX printer buffer and associated system variables still need to be cleared. Failure to do so means that the first use of the ZX Printer will cause garbage to be printed, i.e. the paging routines and new system variables still present in the ZX Printer buffer. Subsequently printer output will then be ok since the ZX Printer buffer and system variables will be cleared. Worse still, there is the possibility that new data to be printed will be inserted beyond the ZX Printer buffer since ROM 1 does not trap whether the ZX Printer system variable PR_POSN and PR_CC hold invalid values. The bug can be fixed by inserting the following instructions, which cause the ZX Printer buffer to be cleared immediately after switching to ROM 1 and before the error report "0 OK" is produced. Credit: Paul Farrow and Andrew Owen.]

| | |
|-----------------|---|
| LD HL,CLEAR_PRB | Address of the routine in ROM 1 to clear the ZX Printer buffer and associated system variables. |
| PUSH HL | |
| SET 1,(IY+\$01) | FLAGS. Signal the printer is in use.] |
| LD A,\$20 | Force 48K mode. |
| LD (BANK_M),A | \$5B5C. |
| JP SWAP | \$5B00. Swap to ROM 1 and return via a RST \$08 / DEFB \$FF. |

MENU ROUTINES — PART 2

Main Menu — 48 BASIC Option

| | | |
|--------|---------------|--|
| L1B66: | LD HL,\$0000 | Stack a \$0000 address to return to. |
| | PUSH HL | |
| | LD A,\$20 | Force 48 mode. |
| | LD (BANK_M),A | \$5B5C |
| | JP SWAP | \$5B00. Swap to ROM 1, return to \$0000. |

Set 'P' Channel Data

This routine overwrites the 'P' channel data with the 'S' channel data, i.e. the default values when using the ZX Printer.

| | | |
|--------|-----------------|--|
| L1B72: | LD HL,(\$5C4F) | CHANS. |
| | LD DE,\$0005 | |
| | ADD HL,DE | HL=Address 'S' channel data. |
| | LD DE,\$000A | |
| | EX DE,HL | HL=\$000A, DE=Address 'S' channel data. |
| | ADD HL,DE | HL=Address 'P' channel data. |
| | EX DE,HL | DE=Address 'P' channel data, HL=Address 'S' channel data. |
| | LD BC,\$0004 | |
| | LDIR | Copy the 'S' channel data over the 'P' channel data. |
| | RES 3,(IY+\$30) | FLAGS2. Signal caps lock unset. [Not really necessary for switching back to 48 BASIC mode] |
| | RES 4,(IY+\$01) | FLAGS. Signal not 128K mode. |
| | RET | |

LOAD "" Command Bytes

Used by the Tape Loader routine.

| | | |
|--------|-----------------------|---------|
| L1B8D: | DEFB \$EF, \$22, \$22 | LOAD "" |
|--------|-----------------------|---------|

BASIC LINE AND COMMAND INTERPRETATION ROUTINES — PART 3

LLIST Routine

| | | |
|--------|-----------|--------------------------|
| L1B90: | LD A,\$03 | Printer channel. |
| | JR L1B96 | Jump ahead to join LIST. |

LIST Routine

| | | |
|--------|-------------------|---|
| L1B94: | LD A,\$02 | Main screen channel. |
| L1B96: | LD (IY+\$02),\$00 | TV_FLAG. Signal 'an ordinary listing in the main part of the screen'. |
| | RST 28H | |
| | DEFW SYNTAX_Z | \$2530. |
| | JR Z,L1BA2 | Do not open the channel if checking syntax. |
| | RST 28H | |
| | DEFW CHAN_OPEN | \$1601. Open the channel. |
| L1BA2: | RST 28H | |
| | DEFW GET_CHAR | \$0018. [Could just do RST \$18] |
| | RST 28H | |
| | DEFW STR_ALTER | \$2070. See if the stream is to be changed. |
| | JR C,L1BC2 | Jump forward if unchanged. |
| | RST 28H | |
| | DEFW GET_CHAR | \$0018. Get current character. |
| | CP \$3B | Is it a ';'? |
| | JR Z,L1BB5 | Jump if it is. |
| | CP '' | \$2C. Is it a ','? |
| | JR NZ,L1BBD | Jump if it is not. |
| L1BB5: | RST 28H | |
| | DEFW NEXT_CHAR | \$0020. Get the next character. |
| | CALL L192D | Indirectly call EXPT-1NUM in ROM 1 to check that a numeric expression follows, e.g. LIST #5,20. |
| | JR L1BC5 | Jump forward with it. |
| L1BBD: | RST 28H | |
| | DEFW USE_ZERO | \$1CE6. Otherwise use zero and |
| | JR L1BC5 | jump forward. |

Come here if the stream was unaltered.

| | | |
|--------|----------------|--|
| L1BC2: | RST 28H | |
| | DEFW FETCH_NUM | \$1CDE. Fetch any line or use zero if none supplied. |
| L1BC5: | CALL L18C0 | If checking the syntax of the edit-line move on to the next statement. |
| | RST 28H | |
| | DEFW LIST_5+3 | \$1825. Delegate handling to ROM 1. |
| | RET | |

RAM Disk SAVE! Routine

| | | |
|--------|---------------|-------------------------------------|
| L1BCC: | LD (OLDSP),SP | \$5B81. Save SP. |
| | LD SP,TSTACK | \$5BFF. Use temporary stack. |
| | CALL L1CB6 | Create new catalogue entry. |
| | LD BC,(HD_0B) | \$5B72. get the length of the file. |

| | |
|---------------|---|
| LD HL,\$FFF7 | -9 (9 is the length of the file header). |
| OR \$FF | Extend the negative number into the high byte. |
| SBC HL,BC | AHL=-(length of file + 9). |
| CALL L1D12 | Check for space in RAM disk (produce "4 Out of memory" if no room). |
| LD BC,\$0009 | File header length. |
| LD HL,HD_00 | \$5B71. Address of file header. |
| CALL L1DCB | Store file header to RAM disk. |
| LD HL,(HD_0D) | \$5B74. Start address of file data. |
| LD BC,(HD_0B) | \$5B72. Length of file data. |
| CALL L1DCB | Store bytes to RAM disk. |
| CALL L1D75 | Update catalogue entry (leaves logical RAM bank 4 paged in). |
| LD A,\$05 | Page in logical RAM bank 5 (physical RAM bank 0). |
| CALL L1C83 | |
| LD SP,(OLDSP) | \$5B81. Use original stack. |
| RET | |

CAT! Routine

| | | |
|--------|----------------|---|
| L1C04: | RST 28H | Get the current character. |
| | DEFW GET_CHAR | \$0018. [Could just do RST \$18 here] |
| | CP 'I' | \$21. Is it 'I'? |
| | JP NZ,L1931 | Jump to "C Nonsense in BASIC" if not. |
| | RST 28H | Get the next character. |
| | DEFW NEXT_CHAR | \$0020. [Could just do RST \$20 here] |
| | CALL L18C0 | Check for end of statement. |
| | LD A,\$02 | Select main screen. |
| | RST 28H | |
| | DEFW CHAN_OPEN | \$1601. |
| | LD (OLDSP),SP | \$5B81. Store SP. |
| | LD SP,TSTACK | \$5BFF. Use temporary stack. |
| | CALL L20F1 | Print out the catalogue. |
| | LD A,\$05 | Page in logical RAM bank 5 (physical RAM bank 0). |
| | CALL L1C83 | |
| | LD SP,(OLDSP) | \$5B81. Use original stack. |
| | RET | |

ERASE! Routine

| | | |
|--------|---------------|---|
| L1C2B: | RST 28H | Get character from BASIC line. |
| | DEFW GET_CHAR | \$0018. |
| | CP 'I' | \$21. Is it 'I'? |
| | JP NZ,L1931 | Jump to "C Nonsense in BASIC" if not. |
| | CALL L13B2 | Get the filename into N_STR1. |
| | CALL L18C0 | Make sure we've reached the end of the BASIC statement. |
| | LD (OLDSP),SP | \$5B81. Store SP. |
| | LD SP,TSTACK | \$5BFF. Use temporary stack. |
| | CALL L1F7E | Do the actual erasing (leaves logical RAM bank 4 paged in). |
| | LD A,\$05 | Restore RAM configuration. |
| | CALL L1C83 | Page in logical RAM bank 5 (physical RAM bank 0). |
| | LD SP,(OLDSP) | \$5B81. Use original stack. |
| | RET | |

RAM DISK COMMAND ROUTINES — PART 2

Load Header from RAM Disk

| | | |
|--------|---------------|--|
| L1C4D: | LD (OLDSP),SP | \$5B81. Store SP. |
| | LD SP,TSTACK | \$5BFF. Use temporary stack. |
| | CALL L1D54 | Find file (return details pointed to by IX). Leaves logical RAM bank 4 paged in. |

The file exists else the call above would have produced an error "h file does not exist"

| | |
|---------------|---|
| LD HL,HD_00 | \$5B71. Load 9 header bytes. |
| LD BC,\$0009 | |
| CALL L1E56 | Load bytes from RAM disk. |
| LD A,\$05 | Restore RAM configuration. |
| CALL L1C83 | Page in logical RAM bank 5 (physical RAM bank 0). |
| LD SP,(OLDSP) | \$5B81. Use original stack. |
| RET | |

Load from RAM Disk

Used by LOAD, VERIFY and MERGE. Note that VERIFY will simply perform a LOAD.

Entry: HL=Destination address.
 DE=Length (will be greater than zero).
 IX=File descriptor.
 IX=Address of catalogue entry (IX+\$10-IX+\$12 points to the address of the file's data, past its header).
 HD_00-HD_11 holds file header information.

| | | |
|--------|---------------|--|
| L1C6A: | LD (OLDSP),SP | \$5B81. Store SP |
| | LD SP,TSTACK | \$5BFF. Use temporary stack. |
| | LD B,D | |
| | LD C,E | BC=Length. |
| | CALL L1E56 | Load bytes from RAM disk. |
| | CALL L1D75 | Update catalogue entry (leaves logical RAM bank 4 paged in). |
| | LD A,\$05 | Restore RAM configuration. |
| | CALL L1C83 | Page in logical RAM bank 5 (physical RAM bank 0). |
| | LD SP,(OLDSP) | \$5B81. Use original stack. |
| | RET | |

PAGING ROUTINES — PART 1

Page Logical RAM Bank

This routine converts between logical and physical RAM banks and pages the selected bank in.

Entry: A=Logical RAM bank.

| | | |
|--------|---------------|--|
| L1C83: | PUSH HL | Save BC and HL. |
| | PUSH BC | |
| | LD HL,L1CA0 | Physical banks used by RAM disk. |
| | LD B,\$00 | |
| | LD C,A | BC=Logical RAM bank. |
| | ADD HL,BC | Point to table entry. |
| | LD C,(HL) | Look up physical page. |
| | DI | Disable interrupts whilst paging. |
| | LD A,(BANK_M) | \$5B5C. Fetch the current configuration. |
| | AND \$F8 | Mask off current RAM bank. |
| | OR C | Include new RAM bank. |
| | LD (BANK_M),A | \$5B5C. Store the new configuration. |
| | LD BC,\$7FFD | |
| | OUT (C),A | Perform the page. |
| | EI | Re-enable interrupts. |
| | POP BC | Restore BC and HL. |
| | POP HL | |
| | RET | |

Physical RAM Bank Mapping Table

| | | |
|--------|-----------|--------------------|
| L1CA0: | DEFB \$01 | Logical bank \$00. |
|--------|-----------|--------------------|

| | |
|-----------|--------------------|
| DEFB \$03 | Logical bank \$01. |
| DEFB \$04 | Logical bank \$02. |
| DEFB \$06 | Logical bank \$03. |
| DEFB \$07 | Logical bank \$04. |
| DEFB \$00 | Logical bank \$05. |

RAM DISK COMMAND ROUTINES — PART 3

Compare Filenames

Compare filenames at N_STR1 and IX.

Exit: Zero flag set if filenames match.

Carry flag set if filename at DE is alphabetically lower than filename at IX.

L1CA6: LD DE,N_STR1 \$5B67.

Compare filenames at DE and IX

| | | |
|--------|------------|--|
| L1CA9: | PUSH IX | |
| | POP HL | |
| | LD B,\$0A | Maximum of 10 characters. |
| L1CAE: | LD A,(DE) | |
| | INC DE | |
| | CP (HL) | compare each character. |
| | INC HL | |
| | RET NZ | Return if characters are different. |
| | DJNZ L1CAE | Repeat for all characters of the filename. |
| | RET | |

Create New Catalogue Entry

Add a catalogue entry with filename contained in N_STR1.

Exit: HL=Address of next free catalogue entry.

IX=Address of newly created catalogue entry.

| | | |
|--------|-----------------|--|
| L1CB6: | CALL L1D31 | Find entry in RAM disk area, returning IX pointing to catalogue entry (leaves logical RAM bank 4 paged in). |
| | JR Z,L1CBF | Jump ahead if does not exist. |
| | CALL L05CB | Produce error report. |
| | DEFB \$20 | "e File already exists" |
| L1CBF: | PUSH IX | |
| | LD BC,\$3FEC | 16384-20 (maximum size of RAM disk catalogue). |
| | ADD IX,BC | IX grows downwards as new RAM disk catalogue entries added. If adding the maximum size to IX does not result in the carry flag being set then the catalogue is full, so issue an error report "4 Out of Memory". |
| | POP IX | |
| | JR NC,L1D2D | Jump if out of memory. |
| | LD HL,\$FFEC | -20 (20 bytes is the size of a RAM disk catalogue entry). |
| | LD A,\$FF | Extend the negative number into the high byte. |
| | CALL L1D12 | Ensure space in RAM disk area. |
| | LD HL,FLAGS3 | \$5B66. |
| | SET 2,(HL) | Signal editing RAM disk catalogue. |
| | PUSH IX | |
| | POP DE | DE=Address of new catalogue entry. |
| | LD HL,N_STR1 | \$5B67. Filename. |
| L1CDD: | LD BC,\$000A | 10 characters in the filename. |
| | LDIR | Copy the filename. |
| | SET 0,(IX+\$13) | Indicate catalogue entry requires updating. |
| | LD A,(IX+\$0A) | Set the file access address to be the |
| | LD (IX+\$10),A | start address of the file. |
| | LD A,(IX+\$0B) | |
| | LD (IX+\$11),A | |

| | |
|----------------|---|
| LD A,(IX+\$0C) | |
| LD (IX+\$12),A | |
| XOR A | Set the fill length to zero. |
| LD (IX+\$0D),A | |
| LD (IX+\$0E),A | |
| LD (IX+\$0F),A | |
| LD A,\$05 | |
| CALL L1C83 | Logical RAM bank 5 (physical RAM bank 0). |
| PUSH IX | |
| POP HL | HL=Address of new catalogue entry. |
| LD BC,\$FFEC | -20 (20 bytes is the size of a catalogue entry). |
| ADD HL,BC | |
| LD (SFNEXT),HL | \$5B83. Store address of next free catalogue entry. |
| RET | |

Adjust RAM Disk Free Space

Adjust the count of free bytes within the RAM disk.

The routine can produce "4 Out of memory" when adding.

Entry: AHL=Size adjustment (negative when a file added, positive when a file deleted).
 A=Bit 7 set for adding data, else deleting data.

| | | |
|--------|------------------|--|
| L1D12: | LD DE,(SFSPACE) | \$5B85. |
| | EX AF,AF' | A'HL=Requested space. |
| | LD A,(SFSPACE+2) | \$5B87. ADE=Free space on RAM disk. |
| | LD C,A | CDE=Free space. |
| | EX AF,AF' | AHL=Requested space. |
| | BIT 7,A | A negative adjustment, i.e. adding data? |
| | JR NZ,L1D29 | Jump ahead if so. |

Deleting data

| | | |
|--------|------------------|---------------------------|
| | ADD HL,DE | |
| | ADC A,C | AHL=Free space left. |
| L1D22: | LD (SFSPACE),HL | \$5B85. Store free space. |
| | LD (SFSPACE+2),A | \$5B87. |
| | RET | |

Adding data

| | | |
|--------|------------|--|
| L1D29: | ADD HL,DE | |
| | ADC A,C | |
| | JR C,L1D22 | Jump back to store free space if space left. |
| L1D2D: | CALL L05CB | Produce error report. |
| | DEFB 03 | "4 Out of memory" |

Find Catalogue Entry for Filename

| | | |
|--------|----------------|---|
| L1D31: | LD A,\$04 | Page in logical RAM bank 4 (physical RAM bank 7). |
| | CALL L1C83 | |
| | LD IX,\$EBEC | Point to first catalogue entry. |
| L1D3A: | LD DE,(SFNEXT) | \$5B83. Pointer to last catalogue entry. |
| | OR A | Clear carry flag. |
| | PUSH IX | |
| | POP HL | HL=First catalogue entry. |
| | SBC HL,DE | |
| | RET Z | Return with zero flag set if end of catalogue reached and hence filename not found. |
| | CALL L1CA6 | Test filename match with N_STR1 (\$5B67). |
| | JR NZ,L1D4D | Jump ahead if names did not match. |
| | OR \$FF | Reset zero flag to indicate filename exists. |
| | RET | |
| L1D4D: | LD BC,\$FFEC | -20 bytes (20 bytes is the size of a catalogue entry). |

ADD IX,BC
JR L1D3A

Point to the next directory entry.
Test the next name.

Find RAM Disk File

Find a file in the RAM disk matching name held in N_STR1,
and return with IX pointing to the catalogue entry.

| | | |
|--------|----------------|---|
| L1D54: | CALL L1D31 | Find entry in RAM disk area, returning IX pointing to catalogue entry (leaves logical RAM bank 4 paged in). |
| | JR NZ,L1D5D | Jump ahead if it exists. |
| | CALL L05CB | Produce error report. |
| | DEFB \$23 | "h File does not exist" |
| L1D5D: | LD A,(IX+\$0A) | Take the current start address (bank + location) |
| | LD (IX+\$10),A | and store it as the current working address. |
| | LD A,(IX+\$0B) | |
| | LD (IX+\$11),A | |
| | LD A,(IX+\$0C) | |
| | LD (IX+\$12),A | |
| | LD A,\$05 | Page in logical RAM bank 5 (physical RAM bank 0). |
| | CALL L1C83 | |
| | RET | [Could have saved 1 byte by using JP \$1C83 (ROM 0)] |

Update Catalogue Entry

| | | |
|--------|-----------------|---|
| L1D75: | LD A,\$04 | Page in logical RAM bank 4 (physical RAM bank 7). |
| | CALL L1C83 | |
| | BIT 0,(IX+\$13) | |
| | RET Z | Ignore if catalogue entry does not require updating. |
| | RES 0,(IX+\$13) | Indicate catalogue entry updated. |
| | LD HL,FLAGS3 | \$5B66. |
| | RES 2,(HL) | Signal not editing RAM disk catalogue. |
| | LD L,(IX+\$10) | Points to end address within logical RAM bank. |
| | LD H,(IX+\$11) | |
| | LD A,(IX+\$12) | Points to end logical RAM bank. |
| | LD E,(IX+\$0A) | Start address within logical RAM bank. |
| | LD D,(IX+\$0B) | |
| | LD B,(IX+\$0C) | Start logical RAM bank. |
| | OR A | Clear carry flag. |
| | SBC HL,DE | HL=End address-Start address. Maximum difference fits within 14 bits. |
| | SBC A,B | A=End logical RAM bank-Start logical RAM bank - 1 if addresses overlap. |
| | RL H | |
| | RL H | Work out how many full banks of 16K are being used. |
| | SRA A | Place this in the upper two bits of H. |
| | RR H | |
| | SRA A | |
| | RR H | HL=Total length. |
| | LD (IX+\$0D),L | Length within logical RAM bank. |
| | LD (IX+\$0E),H | |
| | LD (IX+\$0F),A | |

Copy the end address of the previous entry into the new entry

| | |
|----------------|--|
| LD L,(IX+\$10) | End address within logical RAM bank. |
| LD H,(IX+\$11) | |
| LD A,(IX+\$12) | End logical RAM bank. |
| LD BC,\$FFEC | -20 bytes (20 bytes is the size of a catalogue entry). |
| ADD IX,BC | Address of next catalogue entry. |
| LD (IX+\$0A),L | Start address within logical RAM bank. |
| LD (IX+\$0B),H | |
| LD (IX+\$0C),A | Start logical RAM bank. |

| | RR H | |
| | SRA A | |
| | RR H | HL=Length of all files to be moved. |
| | LD BC,\$0014 | 20 bytes is the size of a catalogue entry. |
| | ADD IX,BC | IX=Catalogue entry to delete. |
| | LD (IX+\$10),L | Store file length in the 'deleted' catalogue entry. |

SPANISH SPECTRUM +2 ROM 0 DISASSEMBLY

| | |
|----------------|--|
| LD (IX+\$11),H | |
| LD (IX+\$12),A | |
| LD BC,\$FFEC | -20 (20 bytes is the size of a catalogue entry). |
| ADD IX,BC | IX=Next catalogue entry. |
| LD L,(IX+\$0A) | DHL=Start address of next RAM disk file entry. |
| LD H,(IX+\$0B) | |
| LD D,(IX+\$0C) | |
| LD BC,\$0014 | 20 bytes is the size of a catalogue entry. |
| ADD IX,BC | IX points to catalogue entry to delete. |
| LD A,D | Page in logical RAM bank for start address of entry to delete. |
| CALL L1C83 | |
| LD A,(BANK_M) | \$5B5C. |
| LD E,A | Save current RAM bank configuration in E. |
| LD BC,\$7FFD | Select physical RAM bank 7. |
| LD A,\$07 | |
| DI | Disable interrupts whilst performing paging operations. |
| OUT (C),A | Page in selected RAM bank. |
| EXX | DHL'=Start address of next RAM disk file entry. |
| LD L,(IX+\$0A) | DHL=Start of address of RAM disk file entry to delete. |
| LD H,(IX+\$0B) | |
| LD D,(IX+\$0C) | |
| LD A,D | |
| CALL L1C83 | Page in logical RAM bank for file entry (will update BANK_M). |
| LD A,(BANK_M) | \$5B5C. |
| LD E,A | Get RAM bank configuration for the file in E. |
| LD BC,\$7FFD | |
| EXX | DHL=Start address of next RAM disk file entry. |

At this point we have the registers and alternate registers pointing to the actual bytes in the RAM disk for the file to be deleted and the next file, with length bytes of the catalogue entry for the file to be deleted containing the length of bytes for all subsequent files that need to be moved down in memory. A loop is entered to move all of these bytes where the delete file began.

DHL holds the address of the byte to be moved.

E contains the value which should be OUTed to \$5B5C to page in the relevant RAM page.

|--------|----------|---------------------------|

NEW Routine

L21C9: DI
 JP L019D Re-initialise the machine.

CIRCLE Routine

This routine draws an approximation to the circle with centre co-ordinates X and Y and radius Z. These numbers are rounded to the nearest integer before use.

Thus Z must be less than 87.5, even when (X,Y) is in the centre of the screen.

The method used is to draw a series of arcs approximated by straight lines.

L21CD: RST 18H Get character from BASIC line.
 CP ',' \$2C. Check for second parameter.
 JR NZ,L220A Jump ahead (for error C) if not.
 RST 20H Advance pointer into BASIC line.
 RST 28H Get parameter.
 DEFW EXPT_1NUM \$1C82. Radius to calculator stack.
 CALL L18C0 Move to consider next statement if checking syntax.
 RST 28H
 DEFW CIRCLE+\$000D \$232D. Delegate handling to ROM 1.
 RET

DRAW Routine

This routine is entered with the co-ordinates of a point X0, Y0, say, in COORDS. If only two parameters X, Y are given with the DRAW command, it draws an approximation to a straight line from the point X0, Y0 to X0+X, Y0+Y.

If a third parameter G is given, it draws an approximation to a circular arc from X0, Y0 to X0+X, Y0+Y turning anti-clockwise through an angle G radians.

L21DD: RST 18H Get current character.
 CP ',' \$2C.
 JR Z,L21E9 Jump if there is a third parameter.
 CALL L18C0 Error C during syntax checking if not at end of line/statement.
 RST 28H
 DEFW LINE_DRAW \$2477. Delegate handling to ROM 1.
 RET

L21E9: RST 20H Get the next character.
 RST 28H
 DEFW EXPT_1NUM \$1C82. Angle to calculator stack.
 CALL L18C0 Error C during syntax checking if not at end of line/statement.
 RST 28H
 DEFW DR_3_PRMS+\$0007 \$2394. Delegate handling to ROM 1.
 RET

DIM Routine

This routine establishes new arrays in the variables area. The routine starts by searching the existing variables area to determine whether there is an existing array with the same name. If such an array is found then it is 'reclaimed' before the new array is established. A new array will have all its elements set to zero if it is a numeric array, or to 'spaces' if it is an array of strings.

L21F4: RST 28H Search to see if the array already exists.
 DEFW LOOK_VARS \$28B2.
 JR NZ,L220A Jump if array variable not found.
 RST 28H
 DEFW SYNTAX_Z \$2530.
 JR NZ,L2206 Jump ahead during syntax checking.
 RES 6,C Test the syntax for string arrays as if they were numeric.
 RST 28H
 DEFW STK_VAR \$2996. Check the syntax of the parenthesised expression.
 CALL L18C0 Error when checking syntax unless at end of line/statement.

An 'existing array' is reclaimed.

| | | |
|--------|------------------------------|-------------------------------------|
| L2206: | RST 28H DEFW D_RUN RET | \$2C15. Delegate handling to ROM 1. |
|--------|------------------------------|-------------------------------------|

Error Report C — Nonsense in BASIC

| | | |

| | JR C,L234F | |
| | CALL L05CB | Produce error report. |
| | DEFB \$2B | "p (c) 1986 Sinclair Research Ltd" [BUG] - This should be "Parameter error". The Spanish 128 produces "p Bad parameter" but to save memory perhaps the UK 128 was intended to use the existing "Q Parameter error" and the change of the error code byte here was overlooked. In that case it would have had a value of \$19. Note that generation of this error when using the main screen editor will result in a crash. Credit: Andrew Owen] |
| L234F: | CALL L18C0 | Ensure end-of-statement or end-of-line. |
| | JP L09A4 | Continue with PLAY code. |

UNUSED ROUTINES — PART 1

There now follows 513 bytes of routines that are not used by the ROM, from \$2355 (ROM 0) to \$2555 (ROM 0). They are remnants of the original Spanish 128's ROM code, although surprisingly they appear in a different order within that ROM.

Return to Editor

[Never called by this ROM]

| | | |
|--------|---------------|--|
| L2355: | LD HL,TSTACK | \$5BFF. |
| | LD (OLDSP),HL | \$5B81. |
| | CALL L1F64 | Use Workspace RAM configuration (physical RAM bank 7). |
| | JP L25EA | Jump ahead to the Editor. |

BC=HL-DE, Swap HL and DE

Exit: BC=HL-DE.

DE=HL, HL=DE.

[Never called by this ROM]

| | | |
|--------|-----------|---------------|
| L2361: | AND A | |
| | SBC HL,DE | |
| | LD B,H | |
| | LD C,L | BC=HL-DE. |
| | ADD HL,DE | |
| | EX DE,HL | HL=DE, DE=HL. |
| | RET | |

Create Room for 1 Byte

Creates a single byte in the workspace, or automatically produces an error '4' if not.

[Never called by this ROM]

| | | |
|--------|----------------|---|
| L2369: | LD BC,\$0001 | Request 1 byte. |
| | PUSH HL | |
| | PUSH DE | |
| | CALL L2377 | Test whether there is space. If it fails this will cause the error handler in ROM 0 to be called. If MAKE_ROOM were called directly and |
| | POP DE | and out of memory condition detected then the ROM 1 error handler would |
| | POP HL | be called instead. |
| | RST 28H | \$1655. The memory check passed so safely make the room. |
| | DEFW MAKE_ROOM | |
| | RET | |

Room for BC Bytes?

Test whether there is room for the specified number of bytes in the spare memory, producing error "4 Out of memory" if not. This routine is very similar to that at \$3F66 with the exception that this routine assumes IY points at the system variables.

Entry: BC=Number of bytes required.

Exit : Returns if the room requested is available else an error '4' is produced.

[Called by the routine at \$2369 (ROM 0), which is itself never called by this ROM]

| | | |
|--------|-------------------|--|
| L2377: | LD HL,(\$5C65) | STKEND. |
| | ADD HL,BC | Would adding the specified number of bytes overflow the RAM area? |
| | JR C,L2387 | Jump to produce an error if so. |
| | EX DE,HL | DE=New end address. |
| | LD HL,\$0082 | Would there be at least 130 bytes at the top of RAM? |
| | ADD HL,DE | |
| | JR C,L2387 | Jump to produce an error if not. |
| | SBC HL,SP | If the stack is lower in memory, would there still be enough room? |
| | RET C | Return if there would. |
| L2387: | LD (IY+\$00),\$03 | Signal error "4 Out of Memory". |
| | JP L0321 | Jump to error handler routine. |

HL = A*32

[Called by routines at \$23A2 (ROM 0) and \$23D7 (ROM 0), which are themselves never called by this ROM]

| | | |
|--------|---------|---|
| L238E: | ADD A,A | A*2. |
| | ADD A,A | A*4. Then multiply by 8 in following routine. |

HL = A*8

[Called by the routine at \$2400 (ROM 0), which ultimately is itself never called by this ROM]

| | | |
|--------|-----------|----------------|
| L2390: | LD L,A | |
| | LD H,\$00 | |
| | ADD HL,HL | A*2. |
| | ADD HL,HL | A*4. |
| | ADD HL,HL | A*8. |
| | RET | Return HL=A*8. |

Find Amount of Free Space

Exit: Carry flag set if no more space, else HL holds the amount of free space.

[Never called by this ROM]

| | | |
|--------|----------------|--|
| L2397: | LD HL,\$0000 | |
| | ADD HL,SP | HL=SP. |
| | LD DE,(\$5C65) | STKEND. |
| | OR A | |
| | SBC HL,DE | Effectively SP-STKEND, i.e. the amount of available space. |
| | RET | |

Print Screen Buffer Row

Prints row from the screen buffer to the screen.

Entry: A=Row number.

[Never called by this ROM]

| | | |
|--------|-----------------|--|
| L23A3: | RES 0,(IY-\$39) | KSTATE+1. Signal do not invert attribute value. [IY+\$3B on the Spanish 128] |
| | CALL L238E | HL=A*32. Number of bytes prior to the requested row. |
| | PUSH HL | Save offset to requested row to print. |
| | LD DE,(\$FF24) | Fetch address of screen buffer. |

| | |
|---------------|--|
| ADD HL,DE | Point to row entry. |
| LD D,H | |
| LD E,L | DE=Address of row entry. |
| EX (SP),HL | Stack address of row entry. HL=Offset to requested row to print. |
| PUSH HL | Save offset to requested row to print. |
| PUSH DE | Save address of row entry. |
| LD DE,\$5800 | Attributes file. |
| ADD HL,DE | Point to start of corresponding row in attributes file. |
| EX DE,HL | DE=Start address of corresponding row in attributes file. |
| POP HL | HL=Address of row entry. |
| LD BC,\$0020 | 32 columns. |
| LD A,(\$5C8F) | ATTR_T. Fetch the temporary colours. |
| CALL L24BA | Set the colours for the 32 columns in this row, processing any colour control codes from the print string. |
| | HL=Offset to requested row to print. |
| POP HL | |
| LD A,H | |
| LD H,\$00 | Calculate corresponding display file address. |
| ADD A,A | |
| ADD A,A | |
| ADD A,A | |
| ADD A,\$40 | |
| LD D,A | |
| LD E,H | |
| ADD HL,DE | |
| EX DE,HL | DE=Display file address. |
| POP HL | HL=Offset to requested row to print. |
| LD B,\$20 | 32 columns. |
| JP L2400 | Print one row to the display file. |

Blank Screen Buffer Content

Sets the specified number of screen buffer positions from the specified row to \$FF.

Entry: A=Row number.

BC=Number of bytes to set.

[Never called by this ROM]

| | | |
|--------|----------------|---|
| L23D7: | LD D,\$FF | The character to set the screen buffer contents to. |
| | CALL L238E | HL=A*32. Offset to the specified row. |
| | LD A,D | |
| | LD DE,(\$FF24) | Fetch the address of the screen buffer. |
| | ADD HL,DE | HL=Address of first column in the requested row. |
| | LD E,L | |
| | LD D,H | |
| | INC DE | DE=Address of second column in the requested row. |
| | LD (HL),A | Store the character. |
| | DEC BC | |
| | LDIR | Repeat for all remaining bytes required. |
| | RET | |

Print Screen Buffer to Display File

[Never called by this ROM]

| | | |
|--------|----------------|---|
| L23EA: | CALL L24A7 | Set attributes file from screen buffer. |
| | LD DE,\$4000 | DE=First third of display file. |
| | LD HL,(\$FF24) | Fetch address of screen buffer. |
| | LD B,E | Display 256 characters. |
| | CALL L2400 | Display string. |
| | LD D,\$48 | Middle third of display file. |
| | CALL L2400 | Display string. |
| | LD D,\$50 | Last third of display file. |
| | LD B,\$C0 | Display 192 characters. |

Print Screen Buffer Characters to Display File

Displays ASCII characters, UDGs, graphic characters or two special symbols in the display file, but does not alter the attributes file. Character code \$FE is used to represent the error marker bug symbol and the character code \$FF is used to represent a null, which is displayed as a space.

Entry: DE=Display file address.
HL=Points to string to print.
B=Number of characters to print.

[Used by routine at \$23EA (ROM 0) and called by the routine at \$23A2 (ROM 0), both of which are themselves never called by this ROM]

| | | |
|--------|------------|-----------------------------------|
| L2400: | LD A,(HL) | Fetch the character. |
| | PUSH HL | Save string pointer. |
| | PUSH DE | Save display file address. |
| | CP \$FE | Was it \$FE (bug) or \$FF (null)? |
| | JR C,L240B | Jump ahead if not. |
| | SUB \$FE | Reduce range to \$00-\$01. |
| | JR L2441 | Jump ahead to show symbol. |

Comes here if character code if below \$FE

| | | |
|--------|-------------|----------------------------|
| L240B: | CP \$20 | Is it a control character? |
| | JR NC,L2416 | Jump ahead if not. |

Comes here if a control character

| | | |
|--------|-------------|--|
| | LD HL,L2546 | Graphic for a 'G' (not a normal G though). Used to indicate embedded colour control codes. |
| | AND A | Clear the carry flag to indicate no need to switch back to RAM bank 7. |
| | EX AF,AF' | Save the flag. |
| | JR L244A | Jump ahead to display the symbol. |
| L2416: | CP \$80 | Is it a graphic character or UDG? |
| | JR NC,L2428 | Jump ahead if so. |

Comes here if an ASCII character

| | | |
|--|----------------|--|
| | CALL L2390 | HL=A*8. |
| | LD DE,(\$5C36) | CHARS. |
| | ADD HL,DE | Point to the character bit pattern. |
| | POP DE | Fetch the display file address. |
| | CALL \$FF28 | Copy character into display file (via RAM Routine). Can't use routine at \$244B (ROM 0) since it does not perform a simple return. |
| | JR L246F | Continue with next character. |

Comes here if a graphic character or UDG

| | | |
|--------|-------------|----------------------------|
| L2428: | CP \$90 | Is it a graphic character? |
| | JR NC,L2430 | Jump ahead if not. |

Comes here if a graphic character

| | |
|----------|-----------------------------------|
| SUB \$7F | Reduce range to \$01-\$10. |
| JR L2441 | Jump ahead to display the symbol. |

Comes here if a UDG

| | | |
|--------|----------------|--|
| L2430: | SUB \$90 | Reduce range to \$00-\$6D. |
| | CALL L2390 | HL=A*8. |
| | POP DE | Fetch display file address. |
| | CALL L1F3F | Use Normal RAM Configuration (RAM bank 0) to allow access to character bit patterns. |
| | PUSH DE | Save display file address. |
| | LD DE,(\$5C7B) | UDG. Fetch address of UDGs. |
| | SCF | Set carry flag to indicate need to switch back to RAM bank 7. |
| | JR L2448 | Jump ahead to locate character bit pattern and display the symbol. |

Come here if (HL) was \$FE or \$FF, or with a graphic character.

At this point A=\$00 if (HL) was \$FE indicating a bug symbol, or \$01 if (HL) was \$FF indicating a null, or A=\$01-\$10 if a graphic character.

| | | |
|--------|-------------|--|
| L2441: | LD DE,L254E | Start address of the graphic character bitmap table. |
| | CALL L2390 | HL=A*8 -> \$0000 or \$0008. |
| | AND A | Clear carry flag to indicate no need to switch back to RAM bank 7. |
| L2448: | EX AF,AF' | Save switch bank indication flag. |
| | ADD HL,DE | Point to the symbol bit pattern data. |
| L244A: | POP DE | Fetch display file address. Drop through into routine below. |

Copy A Character « RAM Routine »

Routine copied to RAM at \$FF36-\$FF55 by subroutine at \$248E (ROM 0).

Also used in ROM from above routine.

This routine copies 8 bytes from HL to DE. It increments HL and D after each byte, restoring D afterwards.

It is used to copy a character into the display file.

Entry: HL=Character data.

DE=Display file address.

[Called by a routine that is itself never called by this ROM]

| | | |
|--------|-----------|--|
| L244B: | LD C,D | Save D. |
| | LD A,(HL) | |
| | LD (DE),A | Copy byte 1. |

| | INC HL | |
| | INC D | |
| | LD A,(HL) | |
| | LD (DE),A | Copy byte 8. |
| | LD D,C | Restore D. « Last byte copied to RAM » |

When the above routine is used in ROM, it drops through to here.

| | | |
|--------|--------------|---|
| L246B: | EX AF,AF' | Need to switch back to RAM bank 7? |
| | CALL C,L1F64 | If so then switch to use Workspace RAM configuration (physical RAM bank 7). |
| L246F: | POP HL | Fetch address of string data. |
| | INC HL | Move to next character. |
| | INC DE | Advance to next display file column. |
| | DJNZ L2400 | Repeat for all requested characters. |
| | RET | |

Toggle ROMs 1 « RAM Routine »

Routine copied to RAM at \$FF28-\$FF35 by subroutine at \$248E (ROM 0).

This routine toggles to the other ROM than the one held in BANK_M.

Entry: A'= Current paging configuration.

[Called by a routine that is itself never called by this ROM]

| | | |
|--------|---------------|---|
| L2475: | PUSH BC | Save BC |
| | DI | Disable interrupts whilst paging. |
| | LD BC,\$7FFD | |
| | LD A,(BANK_M) | \$5B5C. Fetch current paging configuration. |
| | XOR \$10 | Toggle ROMs. |
| | OUT (C),A | Perform paging. |
| | EI | Re-enable interrupts. |
| | EX AF,AF' | Save the new configuration in A'. « Last byte copied to RAM » |

Toggle ROMs 2 « RAM Routine »

Routine copied to RAM at \$FF56-\$FF60 by subroutine at \$248E (ROM 0).

This routine toggles to the other ROM than the one specified.

It is used to page back to the original configuration.

Entry: A'= Current paging configuration.

[Called by a routine that is itself never called by this ROM]

| | | |
|--------|-----------|--|
| L2483: | EX AF,AF' | Retrieve current paging configuration. |
| | DI | Disable interrupts whilst paging. |
| | LD C,\$FD | Restore Paging I/O port number. |
| | XOR \$10 | Toggle ROMs. |
| | OUT (C),A | Perform paging. |
| | EI | Re-enable interrupts. |
| | POP BC | Restore BC. |
| | RET | « Last byte copied to RAM » |

Construct 'Copy Character' Routine in RAM

This routine copies 3 sections of code into RAM to construct a single routine that can be used to copy the bit pattern for a character into the display file.

Copy \$2475-\$2482 (ROM 0) to \$FF28-\$FF35 (14 bytes).

Copy \$244B-\$246A (ROM 0) to \$FF36-\$FF55 (32 bytes).

Copy \$2483-\$248D (ROM 0) to \$FF56-\$FF60 (11 bytes).

[Never called by this ROM]

| | | |
|--------|--------------|---|
| L248E: | LD HL,L2475 | Point to the 'page in other ROM' routine. |
| | LD DE,\$FF28 | Destination RAM address. |
| | LD BC,\$000E | |
| | LDIR | Copy the routine. |
| | PUSH HL | |
| | LD HL,L244B | Copy a character routine. |
| | LD C,\$20 | |
| | LDIR | Copy the routine. |
| | POP HL | HL=\$2483 (ROM 0), which is the address of the 'page back to original ROM' routine. |
| | LD C,\$0B | |
| | LDIR | Copy the routine. |
| | RET | |

Set Attributes File from Screen Buffer

This routine parses the screen buffer string contents looking for colour control codes and changing the attributes file contents correspondingly.

[Called by the routine at \$23EA (ROM 0), which is itself never called by this ROM]

| | | |
|--------|-----------------|--|
| L24A7: | RES 0,(IY-\$39) | KSTATE+1. Signal do not invert attribute value. [Spanish 128 uses IY-\$3B] |
| | LD DE,\$5800 | The start of the attributes file. |

KEY ACTION TABLES

Editing Keys Action Table

Each editing key code maps to the appropriate handling routine.

This includes those keys which mirror the functionality of the add-on keypad; these are found by trapping the keyword produced by the keystrokes in 48K mode.

[Surprisingly there is no attempt to produce an intelligible layout instead the first 16 keywords have been used. Additionally the entries for DELETE and ENTER should probably come in the first six entries for efficiency reasons.]

| | | |
|--------|------------|--|
| L2556: | DEFB \$15 | Number of table entries. |
| | DEFB \$0B | Key code: Cursor up. |
| | DEFW L2ACC | CURSOR-UP handler routine. |

| | JR Z,L2620 | Jump ahead if so. |
| | CP \$00 | Edit Menu mode? |
| | JP NZ,L28FF | Jump if not to re-display Main menu. |

Edit menu Print mode

| | |
|------------|--|
| CALL L3880 | Clear screen and print "128 BASIC" in the banner line. |
| JR L2623 | Jump ahead to return to the Editor. |

Calculator mode

| | | |
|--------|------------|---|
| L2620: | CALL L3885 | Clear screen and print "Calculator" in the banner line. |
|--------|------------|---|

Return to the Editor

Either as the result of a re-listing, an error or from completing the Edit Menu Print option.

[BUG] - Occurs only with ZX Interface 1 attached and a BASIC line such as 1000 OPEN #4, "X" (the line number must be greater than 999). This produces the error message "Invalid device expression, 1000:1" but the message is too long to fit on a single line. When using the lower screen for editing, spurious effects happen to the bottom lines. When using the full screen editor, a crash occurs. Credit: Toni Baker, ZX Computing Monthly] [The bug is caused by system variable DF_SZ being increased to 3 as a result of the error message spilling onto an extra line. The error can be resolved by inserting a LD (IY+\$31),\$02 instruction at \$2623 (ROM 0). Credit: Paul Farrow]

| | | |
|--------|--|---|
| L2623: | CALL L310E CALL L325A LD A,(\$EC0E) CP \$04 JR Z,L2672 | Reset Below-Screen Line Edit Buffer settings to their default values. Reset Above-Screen Line Edit Buffer settings to their default values. Fetch the mode. Calculator mode? Jump ahead if not to wait for a key press. |

Select Upper Screen

Set the upper screen as the editing area.

| | | |
|--------|---|---|
| L26ED: | LD HL,\$EC0D RES 6,(HL) CALL L28F6 CALL L3880 | Editor flags. Signal using main screen. Reset Cursor Position. Clear screen and print the "128 BASIC" banner line. |
| L26F8: | LD HL,(\$FC9A) LD A,H OR L CALL NZ,L3382 CALL L154E JP L2A2A | Line number at top of screen. Is there a line? If there is then get the address of BASIC line for this line number. Relist the BASIC program. Set attribute at editing position so as to show the cursor, and return. |

Produce Error Beep

This is the entry point to produce the error beep, e.g. when trying to cursor up or down past the BASIC program.

It produces a different tone and duration from the error beep of 48K mode. The change in pitch is due to the SRL A instruction at \$2709 (ROM 0), and the change in duration is due to the instruction at \$2710 (ROM 0) which loads HL with \$0C80 as opposed to \$1A90 which is used when in 48K mode. The key click and key repeat sounds are produced by entering at \$270B (ROM 0) but with A holding the value of system variable PIP. This produces the same tone as 48K mode but is of a much longer duration due to HL being loaded with \$0C80 as opposed to the value of \$00C8 used in 48K mode. The Spanish 128 uses the same key click tone and duration in 128K mode as it does in 48K mode, leading to speculation that the Spectrum 128 (and subsequent models) should have done the same and hence suffer from a bug. However, there is no reason why this should be the case, and it can easily be imagined that the error beep note duration of 48K mode would quickly become very irritating when in 128K mode where it is likely to occur far more often. Hence the reason for its shorter duration. The reason for the longer key click is less clear, unless it was to save memory by using a single routine. However, it would only have required an additional 3 bytes to set HL independently for key clicks, which is not a great deal considering there is 1/2K of unused routines at \$2355 (ROM 0). Since the INPUT command is handled by ROM 1, it produces key clicks at the 48K mode duration even when executed from 128 BASIC mode.

| | | |
|--------|------------------------|-----------------------|
| L2706: | LD A,(\$5C38) SRL A | RASP. Divide by 2. |
|--------|------------------------|-----------------------|

This entry point is called to produce the key click tone. In 48K mode, the key click sound uses an HL value of \$00C8 and so is 16 times shorter than in 128K mode.

| | | |
|--------|--|-------------------------|
| L270B: | PUSH IX LD D,\$00 LD E,A LD HL,\$0C80 | Pitch. Duration. |
| L2713: | RST 28H DEFW BEEPER POP IX RET | \$03B5. Produce a tone. |

Paper 1, Ink 7 - Blue.
Set the cursor colour.
Relist the BASIC program.
Signal do not produce an error beep.
Set attribute at editing position so as to show the cursor, and return.

WORD-LEFT Key Handler Routine

This routine moves to the start of the current word that the cursor is on, or if it is on the first character of a word then it moves to the start of the previous word. If there is no word to move to then signal to produce an error beep.

Symbol:

←←

Exit: Carry flag reset to indicate to produce an error beep.

L2A0C: CALL L2A24
CALL L2C22
JP NC,L2A2A

LD A,B

JP L2A30

Remove cursor, restoring old attribute.
Find start of the current word to the left.
Jump if no word to the left to restore cursor attribute at current editing position, and return. [Could have saved 4 bytes by joining the routine below, i.e. JR \$29E7]
A=New cursor column number. Carry flag is set indicating not to produce an error beep.
Store editing position and print cursor, and then return.

WORD-RIGHT Key Handler Routine

This routine moves to the start of the next word. If there is no word to move to then signal to produce an error beep.

Symbol:

→→

Exit: Carry flag reset to indicate to produce an error beep.

L2A19: CALL L2A24
CALL L2C41
JR NC,L2A2A

LD A,B

JR L2A30

Remove cursor, restoring old attribute.
Find start of the current word to the right.
Jump if no word to the right to restore cursor attribute at current editing position, and return.
A=The new cursor editing column number. Carry is set indicating not to produce an error beep.
Store editing position and print cursor, and then return.

Remove Cursor

Remove editing colour from current position.

Exit: C=row number.

B=Column number.

L2A24: CALL L2A3F
JP L3687

Get current cursor position (C=row, B=column, A=preferred column).
Restore previous colour to character square

Show Cursor

Set editing cursor colour at current position.

Exit: C=row number.

B=Column number.

L2A2A: CALL L2A3F
 JP L3678

Get current cursor position (C=row, B=column, A=preferred column).

Set editing position character square to cursor colour to show it. [Could have saved 1 byte by using a JR instruction to join the end of the routine below]

Display Cursor

Set editing cursor position and colour and then show it.

Entry: C=Row number.

 B=Column number.

 A=Preferred column number.

L2A30: CALL L2A49

A blank row was found above, must be at the start of the BASIC program

| | |
|----------|---|
| JP L2A2A | Set cursor attribute at existing editing position, and return. Carry flag is reset indicating to produce an error beep. |
|----------|---|

CURSOR-RIGHT Key Handler Routine

Move right 1 character, stopping if the end of the last row of the last BASIC line is reached.
 An error beep is produced if there is no character to the right or no next BASIC line to move to.
 Exit: Carry flag reset to indicate to produce an error beep.

| | | |
|--------|------------|--|
| L2B1B: | CALL L2A24 | Remove cursor, restoring old attribute. |
| | CALL L2BB0 | Find next Screen Line Edit Buffer editable position to right, wrapping to next row if necessary. |
| | JP C,L2A30 | Jump if editable position found to store editing position and print cursor, and then return. |

A blank row was found below, must be at the end of the BASIC program

| | |
|------------|--|
| PUSH AF | Save the carry flag and preferred column number. |
| CALL L2B43 | Move up to the previous row, shifting rows down as appropriate. |
| LD B,\$1F | Column 31. |
| CALL L2C17 | Find the last editable column position searching to the left, returning the column number in B. (Returns carry flag set if there is one) |
| POP AF | Carry flag is reset indicating to produce an error beep. |
| JP L2A30 | Store editing position and print cursor, and then return. |

Edit Buffer Routines — Part 1

Find Closest Screen Line Edit Buffer Editable Position to the Right else Left

This routine searches the specified Screen Line Edit Buffer row from the specified column to the right looking for the first editable position. If one cannot be found then a search is made to the left.

Entry: B=Column number.
 Exit : Carry flag set if character at specified column is editable.
 B=Number of closest editable column.
 HL=Address of closest editable position.

| | | |
|--------|---------------|--|
| L2B31: | PUSH DE | |
| | CALL L2C0C | Find Screen Line Edit Buffer editable position from previous column (or current column if the previous column does not exist) to the right, return column position in B. |
| | CALL NC,L2C17 | If no editable character found then search to the left for an editable character, return column position in B. |

POP DE
RET

Find Closest Screen Line Edit Buffer Editable Position to the Left else Right

This routine searches the specified Screen Line Edit Buffer row from the specified column to the left looking for the first editable position. If one cannot be found then a search is made to the right.

Entry: B=Column number.
Exit : Carry flag set if character at specified column is editable.
B=Number of closest editable column.
HL=Address of closest editable position.

L2B3A: PUSH DE
CALL L2C17 Find Screen Line Edit Buffer editable position to the left, returning column position in B.
CALL NC,L2C0C If no editable character found then search from previous column (or current column if the previous column does not exist) to the right, return column position in B.
POP DE
RET

Insert BASIC Line, Shift Edit Buffer Rows Down If Required and Update Display File If Required

Called from the cursor up and down related key handlers. For example, when cursor up key is pressed the current BASIC line may need to be inserted into the BASIC program if it has been altered. It may also be necessary to shift all rows down should the upper scroll threshold be reached. If the cursor was on a blank row between BASIC lines then it is necessary to shift all BASIC lines below it up, i.e. remove the blank row.

Entry: C=Current cursor row number in the Screen Line Edit Buffer.
Exit : C=New cursor row number in the Screen Line Edit Buffer.
Carry flag set if a new row was moved to.

L2B43: CALL L2CB4 If current BASIC line has been altered and moved off of then insert it into the program.
JR NC,L2B67 Jump if BASIC line was not inserted. [Could have saved 1 byte by using RET NC]
PUSH BC Save the new cursor row and column numbers.
CALL L30EC DE=Start address in Screen Line Edit Buffer of the row specified in C.
LD B,\$00 Column 0.
CALL L2E79 Is this a blank row? i.e. Find editable position on this row to the right, returning column number in B.
CALL NC,L2FB8 If no editable position found then the cursor is on a blank row so shift all BASIC lines below it up to close the gap.
POP BC Retrieve the new cursor row and column numbers.
LD HL,\$F6F1 Point to the editing area information.
LD A,(HL) Fetch the upper scroll threshold.
CP C Is it on the threshold?
JR C,L2B65 Jump if on a row below the threshold.

The upper row threshold for triggering scrolling the screen has been reached so proceed to scroll down one row

PUSH BC Save the new cursor row and column numbers.
CALL L168E Shift all edit buffer rows down, and update display file if required.
POP BC
RET C Return if edit buffer rows were shifted.

The edit buffer rows were not shifted down

LD A,C On the top row of the editing area?
OR A
RET Z Return with carry flag reset if on the top row.
L2B65: DEC C Move onto the previous row.
SCF Signal a new row was moved to.
L2B67: RET

Insert BASIC Line, Shift Edit Buffer Rows Up If Required and Update Display File If Required

Called from the cursor up and down related key handlers. For example, when cursor down key is pressed the current BASIC line may need to be inserted into the BASIC program if it has been altered. It may also be necessary to shift all rows up should the lower scroll threshold be reached. If the cursor was on a blank row between BASIC lines then it is necessary to shift all BASIC lines below it up, i.e. remove the blank row.

Entry: C=Current cursor row number in the Screen Line Edit Buffer.

Exit : C=New cursor row number in the Screen Line Edit Buffer.

Carry flag set if a new row was moved to.

| | | |
|--------|-------------|--|
| L2B68: | PUSH BC | Save row number. |
| | CALL L30EC | DE=Start address in Screen Line Edit Buffer of row held in C, i.e. the new cursor row. |
| | LD B,\$00 | Column 0. |
| | CALL L2E79 | Is this a blank row? i.e. Find editable position on this row to the right, returning column number in B. |
| | POP BC | Get row number. |
| | JR C,L2B77 | Jump if editable position found, i.e. the row exists. [Could have saved 2 bytes by using JP NC,\$2FB8 (ROM 0)] |
| | JP L2FB8 | Cursor is on a blank row so shift all BASIC lines below it up to close the gap. |
| L2B77: | CALL L2CA0 | Insert the BASIC Line into the BASIC program if the line has been altered. |
| | JR NC,L2B92 | Jump if the line was inserted into the program. [Could have saved 1 byte by using RET NC] |

The BASIC line was not inserted into the program. C=New cursor row number, B=New cursor column number, A=New cursor preferred column number

| | |
|--------------|---|
| LD HL,\$F6F1 | Point to the editing area information. |
| INC HL | Point to the 'Bottom Row Scroll Threshold' value. [Could have saved 1 byte by using LD HL,\$F6F2] |
| LD A,C | Fetch the new cursor row number. |
| CP (HL) | Is it on the lower scroll threshold? |
| JR C,L2B90 | Jump if on a row above the threshold. |

The lower row threshold for triggering scrolling the screen has been reached so proceed to scroll up one row

| | |
|------------|---|
| PUSH BC | Save the new cursor row and column numbers. |
| PUSH HL | Save the editing area information address. |
| CALL L1658 | Shift all edit buffer rows up, and update display file if required. |
| POP HL | |
| POP BC | |
| RET C | Return if edit buffer rows were shifted. |

The edit buffer rows were not shifted up

| | |
|-----------|--|
| INC HL | Point to the 'Number of Rows in the Editing Area' value. |
| LD A,(HL) | A=Number of rows in the editing area. |
| CP C | On the last row of the editing area? |
| RET Z | Return with carry flag reset if on the bottom row. |
| L2B90: | INC C |
| | SCF |
| L2B92: | RET |
| | Move onto the next row. |
| | Signal a new row was moved to. |

Find Next Screen Line Edit Buffer Editable Position to Left, Wrapping Above if Required

This routine searches to the left to see if an editable position exists. If there is no editable position available to the left on the current row then the previous row is examined from the last column position.

Entry: B=Column number.

Carry flag reset.

Exit : Carry flag set if a position to the 'left' exists.

B=Number of new editable position.

HL=Address of new editable position.

| | | |
|--------|--------|------------------------------|
| L2B93: | LD D,A | Save the key code character. |
|--------|--------|------------------------------|

| | |
|------------|---|
| DEC B | Back one column position. |
| JP M,L2B9E | Jump if already at beginning of row. |
| LD E,B | E=Column number. |
| CALL L2C17 | Find Screen Line Edit Buffer editable position to the left, returning column position in B. |
| LD A,E | A=Column number. |
| RET C | Return if the new column is editable, i.e. the cursor can be moved within this row. |

Wrap above to the previous row

| | | |
|--------|------------|--|
| L2B9E: | PUSH DE | E=Store the column number. |
| | CALL L2B43 | Move up to the previous row, shifting rows down as appropriate. If moving onto a new BASIC line then |
| | POP DE | insert the previous BASIC line into the BASIC program if it has been altered. |
| | LD A,E | A=Column number. |
| | RET NC | Return if there was no row above. |

A row above exists

| | |
|------------|--|
| LD B,\$1F | Column 31. |
| CALL L2C17 | Find the last editable column position searching to the left, returning the column number in B. (Returns carry flag set if there is one) |
| LD A,B | A=Column number of the closest editable position. |
| RET C | Return if an editable position was found, i.e. the cursor can be moved. |

Return column 0

| | |
|-----------|---|
| LD A,D | Restore the key code character. |
| LD B,\$00 | Set column position 0. |
| RET | [BUG] - This should really ensure the carry flag is reset to signal that no editable position to the left exists, e.g. by using OR A. Fortunately, the carry flag is always reset when this routine is called and so the bug is harmless. Credit: Paul Farrow] |

Find Next Screen Line Edit Buffer Editable Position to Right, Wrapping Below if Required

This routine searches to the right to see if an editable position exists. If there is no editable position available to the right on the current row then the next row is examined from the first column position.

The routine is also called when a character key has been pressed and in this case if the cursor moves to the next row then a blank row is inserted and all affected rows are shifted down.

Entry: B=Column number.
C=Row number.

Exit : Carry flag set if a position to the 'right' exists.
B=Number of closest editable column, i.e. new column number.
A=New column position, i.e. preferred column number or indentation column number.
HL=Address of the new editable position.

| | | |
|--------|------------|--------------------------------------|
| L2BB0: | LD D,A | Save the key code character. |
| | INC B | Advance to the next column position. |
| | LD A,\$1F | Column 31. |
| | CP B | |
| | JR C,L2BBD | Jump if reached end of row. |

New position is within the row

| | |
|------------|---|
| LD E,B | E=New column number. |
| CALL L2C0C | Find Screen Line Edit Buffer editable position from previous column to the right, returning column position in B. |
| LD A,E | A=New column number. |
| RET C | Return if the new column is editable, i.e. the cursor can be moved within this row. |

Need to wrap below to the next row

| | | |
|--------|-------|-----------------------------|
| L2BBD: | DEC B | B=Original column position. |
|--------|-------|-----------------------------|

SPANISH SPECTRUM +2 ROM 0 DISASSEMBLY

| | |
|--------------|--|
| PUSH BC | Save original column and row numbers. |
| PUSH HL | HL=Address of the new editable position. |
| LD HL,\$EC0D | Editor flags. |
| BIT 7,(HL) | Got a key press? |
| JR NZ,L2BF8 | Jump if not. |

A key is being pressed so need to insert a new row

| | |
|--------------|--|
| CALL L30EC | DE=Start address in Screen Line Edit Buffer of the row specified in C. |
| LD HL,\$0020 | |
| ADD HL,DE | Point to the flag byte for the current row. |
| LD A,(HL) | |
| BIT 1,A | Does the BASIC line row span onto another row? |
| JR NZ,L2BF8 | Jump if so to test the next row (it could just be the cursor). |

The BASIC line row does not span onto another row, i.e. cursor at end of line

| | |
|--------------|---|
| SET 1,(HL) | Signal that the row spans onto another row, i.e. a new blank row containing the cursor. |
| RES 3,(HL) | Signal that the row is not the last row of the BASIC line. |
| LD HL,\$0023 | Point to the next row. |
| ADD HL,DE | |
| EX DE,HL | DE=Address of the next row. [Redundant calculation as never used. Could have saved 5 bytes] |
| POP HL | HL=Address of the new editable position. |
| POP BC | B=Original column number. C=Row number. |
| PUSH AF | Save flag byte for the previous row. |
| CALL L2B68 | Move down to the next row, shifting rows up as appropriate. Returns new row number in C. |
| POP AF | Retrieve flag byte for the previous row. |
| CALL L30EC | DE=Start address in Screen Line Edit Buffer of the new row, as specified in C. |
| LD HL,\$0023 | |
| ADD HL,DE | HL=Address of the row after the new row. |
| EX DE,HL | DE=Address of the row after the new row. HL=Address of the new row. |
| RES 0,A | Signal 'not the start row of the BASIC line'. |
| SET 3,A | Signal 'end row of the BASIC line'. |
| CALL L2F0B | Insert a blank row into the Screen Edit Buffer at row specified by C, shifting rows down. |

[BUG] - When typing a line that spills over onto a new row, the new row needs to be indented. However, instead of the newly inserted row being indented, it is the row after it that gets indented. The indentation occurs within the Screen Line Edit Buffer and is not immediately reflected in the display file. When the newly typed line is executed or inserted into the program area, the Screen Line Edit Buffer gets refreshed and hence the effect of the bug is never normally seen. The bug can be fixed by inserting the following instructions. Credit: Paul Farrow.

| | |
|--------------|---|
| LD HL,\$FFDD | -35. |
| ADD HL,DE | |
| EX DE,HL | DE=Points to the start of the previous row.] |
| CALL L362C | Indent the row by setting the appropriate number of null characters in the current Screen Line Edit Buffer row. |
| LD A,B | A=First column after indentation. |
| SCF | Signal not to produce an error beep. |
| RET | |

Wrap below to the next row. Either a key was not being pressed, or a key was being pressed and the BASIC line spans onto a row below (which could contain the cursor only)

| | | |
|--------|------------|--|
| L2BF8: | POP HL | HL=Address of the new editable position. |
| | POP BC | B=Original column position. |
| | PUSH DE | E=New column number. |
| | CALL L2B68 | Move down to the next row, shifting rows up as appropriate. If moving onto a new BASIC line then |
| | POP DE | insert the previous BASIC line into the BASIC program if it has been altered. Returns new row number in C. |
| | LD A,B | A=Original column position. |

RET NC Return if there was no row below.

A row below exists

LD B,\$00 Column 0.
CALL L2C0C Find Screen Line Edit Buffer editable position to the right, returning column position in B.

LD A,B A=New column position.
RET C Return if an editable position was found, i.e. the cursor can be moved.

Return column 0

LD A,E A=Preferred column number.
LD B,\$00 Column 0.
RET Return with carry flag reset.

Find Screen Line Edit Buffer Editable Position from Previous Column to the Right

This routine finds the first editable character position in the specified Screen Line Edit Buffer row from the previous column to the right. It first checks the current column, then the previous column and then the columns to the right. The column containing the first non-null character encountered is returned.

Entry: B=Column number to start searching from.
 C=Row number.

Exit : Carry flag set if an editable character was found.
 B=Number of closest editable column.

L2C0C: PUSH DE Save registers.
 PUSH HL
 CALL L30EC DE=Start address in Screen Line Edit Buffer of the row specified in C.
 CALL L2E79 Find editable position on this row from the previous column to the right, returning column number in B.

 JP L2C9D Restore registers and return. [Could have saved a byte by using JR \$2C3F (ROM 0)]

Find Screen Line Edit Buffer Editable Position to the Left

This routine finds the first editable character position in the Screen Line Edit Buffer row from the current column to the left. It first checks the current column and returns this if it contains an editable character. Otherwise it searches the columns to the left and if an editable character is found then it returns the column to the right of it.

Entry: B=Column number to start searching from.
 C=Row number.

Exit : Carry flag set if an editable character was found.
 B=Number of the column after the editable position.

L2C17: PUSH DE Save registers.
 PUSH HL
 CALL L30EC DE=Start address in Screen Line Edit Buffer of the row specified in C.
 CALL L2E9B Find editable position from current column to the left, returning the column number in B.

 JP L2C9D Restore registers and return. [Could have saved a byte by using JR \$2C3F (ROM 0)]

Find Start of Word to Left in Screen Line Edit Buffer

This routine searches for the start of the current word to the left within the current Screen Line Edit Buffer. It is called from the WORD-LEFT key handler routine.

Entry: C=Row number.

Exit : Carry flag set if word to the left is found.
 B=Column position of the found word.

L2C22: PUSH DE Save registers.
 PUSH HL

Search towards the left of this row until a space or start of line is found

The cursor position is at the location of the error marker position

| | | |
|--------|--------------|-----------------------------------|
| L2D7D: | LD HL,\$EC0D | Editor flags. |
| | SET 7,(HL) | Set 'waiting for key press' flag. |

[BUG] - When moving the cursor up or down, an attempt is made to place the cursor at the same column position that it had on the previous row (the preferred column). If this is not possible then the cursor is placed at the end of the row. However, it is the intention that the preferred column is still remembered and hence an attempt is made to place the cursor at this column whenever it is subsequently moved. However, a bug at this point in the ROM causes the preferred column position for the cursor to be overwritten with random data. If the cursor was moved from its original position into its error position then the preferred column gets set to zero and the next up or down cursor movement will cause the cursor marker to jump to the left-hand side of the screen. However, if the cursor remained in the same position then the preferred column gets set to a random value and so on the next up or down cursor movement the cursor marker can jump to a random position on the screen. The bug can be reproduced by typing a line that is just

longer than one row, pressing enter twice and then cursor down. The cursor marker will probably jump somewhere in the middle of the screen. Press an arrow again and the computer may even crash. Credit: Ian Collier (+3), Andrew Owen (128)] [The bug can be fixed by pre-loading the A register with the current preferred column number. Credit: Paul Farrow.

| | |
|---------------|--|
| LD A,(\$F6F0) | Fetch the preferred column position.] |
| CALL L2A49 | Store cursor editing position. |

|--------|---|--|

Find Edit Buffer Editable Position from Previous Column to the Right

This routine finds the first editable character position in the specified edit buffer row from the previous column to the right.

It first checks the current column, then the previous column and then the columns to the right. The column containing the first non-null character encountered is returned.

Entry: B =Column number to start searching from.

DE=Start of row in edit buffer.

Exit : Carry flag set if an editable character was found.

HL=Address of closest editable position.

B =Number of closest editable column.

| | | |
|--------|---|---|
| L2E79: | LD H,\$00 LD L,B ADD HL,DE LD A,(HL) CP \$00 SCF RET NZ LD A,B OR A JR Z,L2E93 PUSH HL DEC HL LD A,(HL) CP \$00 SCF POP HL RET NZ | [Could have saved 1 byte by calling routine at \$2EB3 (ROM 0)] HL=Column number. HL=Address in edit buffer of the specified column. Fetch the contents. Is it a null character, i.e. end-of-line or past the end-of-line? Return if this character is part of the edited line. |
| L2E8E: | LD A,(HL) CP \$00 SCF RET NZ | Get the current character. Is it a null (i.e. end-of-line)? Signal position is editable. Return if this character is part of the edited line. |
| L2E93: | INC HL INC B LD A,B CP \$1F JR C,L2E8E RET | Advance to the next position. Increment the column number. Reached the end of the row? Jump back if more columns to check. Return with carry flag reset if specified column position does not exist. |

Find Edit Buffer Editable Position to the Left

This routine finds the first editable character position in the specified edit buffer row from the current column to the left.

It first checks the current column and returns this if it contains an editable character. Otherwise it searches the columns to the left and if an editable character is found then it returns the column to the right of it.

Entry: B =Column number to start searching from.

DE=Start of row in edit buffer.

Exit : Carry flag set if an editable character was found.

HL=Address of closest editable position.

B =Number of the column after the editable position.

| | | |
|--------|-----------|--|
| L2E9B: | LD H,\$00 | [Could have saved 1 byte by calling routine at \$2EB3 (ROM 0)] |
|--------|-----------|--|

| | | |
|--------|-------------|---|
| | LD L,B | HL=Column number. |
| | ADD HL,DE | HL=Address in edit buffer of the specified column. |
| | LD A,(HL) | Fetch the contents. |
| | CP \$00 | Is it a null character, i.e. end-of-line or past the end-of-line? |
| | SCF | Signal position is editable. |
| | RET NZ | Return if an editable character was found. |
| L2EA4: | LD A,(HL) | Get the current character. |
| | CP \$00 | Is it a null, i.e. non-editable? |
| | JR NZ,L2EB0 | Jump if not. |
| | LD A,B | At column 0? |
| | OR A | |
| | RET Z | Return if so. |
| | DEC HL | Next column position to test. |
| | DEC B | Decrement column index number. |
| | JR L2EA4 | Repeat test on previous column. |
| L2EB0: | INC B | Advance to the column after the editable position. |
| | SCF | Signal position is editable. |
| | RET | |

Fetch Edit Buffer Row Character

Entry: DE=Add of edit buffer row.

B =Column number.

Exit : A =Character at specified column.

[Not used by the ROM]

| | | |
|--------|-----------|--|
| L2EB3: | LD H,\$00 | |
| | LD L,B | HL=Column number. |
| | ADD HL,DE | HL=Address in edit buffer of the specified column. |
| | LD A,(HL) | Get the current character. |
| | RET | |

Insert Character into Screen Line Edit Buffer

Called when a non-action key is pressed. It inserts a character into the Screen Line Edit Buffer if there is room.

Entry: A=Character code.

B=Cursor column position.

C=Cursor row position.

| | | |
|--------|--------------|---|
| L2EB9: | LD HL,\$EC0D | Editor flags. |
| | OR A | Clear carry flag. [Redundant since carry flag return state never checked] |
| | BIT 0,(HL) | Is the Screen Line Edit Buffer is full? |
| | RET NZ | Return if it is. |
| | PUSH BC | Save cursor position. |
| | PUSH AF | Save key code. [Redundant since \$30EC (ROM 0) preserves AF] |
| | CALL L30EC | DE=Start address in Screen Line Edit Buffer of the row specified in C. |
| | POP AF | Get key code. [Redundant since \$30EC (ROM 0) preserves AF] |

Insert the character into the current row. If a spill from this row occurs then insert that character into the start of the following row and shift all existing characters right by one. Repeat this process until all rows have been shifted.

| | | |
|--------|------------|---|
| L2EC6: | CALL L16CB | Insert character into edit buffer row at current cursor position, shifting the row right. Returns carry flag reset. Zero flag will be set if byte shift out of last column position was \$00. |
| | PUSH AF | Save key code and flags. |
| | EX DE,HL | HL=Address of edit buffer row. DE=Address of flags. |
| | CALL L363C | Print a row of the edit buffer to the screen. |
| | EX DE,HL | DE=Address of edit buffer row. HL=Address of flags. |
| | POP AF | Get key code and flags. |
| | CCF | Sets the carry flag since it was reset via the call to \$16CB (ROM 0). [Redundant since never tested] |
| | JR Z,L2F04 | Jump ahead to make a return if there was no spill out from column 31, with the carry flag set. |

SPANISH SPECTRUM +2 ROM 0 DISASSEMBLY

There was a spill out from the current row, and so this character will need to be inserted as the first character of the following row.
If this is the last row of the BASIC line then a new row will need to be inserted.

| | |
|---------------|---|
| PUSH AF | Save key code. |
| LD B,\$00 | First column in the next row. |
| INC C | Next row. |
| LD A,(\$EC15) | The number of editing rows on screen. |
| CP C | Has the bottom of the Screen Line Edit Buffer been reached? |
| JR C,L2F00 | Jump ahead if so. |

The editing screen is not full

| | |
|------------|---|
| LD A,(HL) | Fetch contents of flag byte for the row (byte after the 32 columns). |
| LD E,A | E=Old flags. |
| AND \$D7 | Mask off 'last row of BASIC line' flag. [Other bits not used, could have used AND \$F7] |
| CP (HL) | Has the status changed? |
| LD (HL),A | Store the new flags, marking it as not the last BASIC row. |
| LD A,E | A=Original flags byte for the row. |
| SET 1,(HL) | Signal that the row spans onto another row. |
| PUSH AF | Save the flags. |
| CALL L30EC | DE=Start address in Screen Line Edit Buffer of the following row, as specified in C. |
| POP AF | Fetch the flags. |
| JR Z,L2EFA | Jump if the character was not inserted into the last row of the BASIC line. |

The character was inserted into the last row of the BASIC line causing a spill of an existing character into a new row, and therefore a new 'last' row needs to be inserted.

| | |
|-------------|--|
| RES 0,A | Signal not the first row of the BASIC line. |
| CALL L2F0B | Insert a blank line into the Screen Edit Buffer. |
| JR NC,L2F04 | Jump if the buffer is full to exit. |
| CALL L362C | Indent the row by setting the appropriate number of null characters in the current Screen Line Edit Buffer row. |
| POP AF | Get key code. |
| JR L2EC6 | Jump back to insert the character in the newly inserted row. [Could have saved 2 bytes by using JR \$2EFD (ROM 0)] |

The character was not inserted into the last row of the BASIC line, so find the first editable position on the following row, i.e. skip over any indentation.

| | | |
|--------|------------|---|
| L2EFA: | CALL L2E79 | Find editable position on this row from the previous column to the right, returning column number in B. |
| | POP AF | Get key code. |
| | JR L2EC6 | Jump back to insert the character into the first editable position of next the row. |

The Screen Edit Line Buffer is full and the character insertion requires shifting of all rows that are off screen in the Below-Screen Line Edit Buffer.

| | | |
|--------|------------|--|
| L2F00: | POP AF | Get key code. |
| | CALL L31A6 | Insert the character at the start of the Below-Screen Line Edit Buffer, shifting all existing characters to the right. |

All paths join here

| | | |
|--------|--------|---------------------------|
| L2F04: | POP BC | Retrieve cursor position. |
| | RET | |

Insert Blank Row into Screen Edit Buffer, Shifting Rows Down

This routine inserts a blank row at the specified row, shifting affected rows down.

Entry: C=Row number to insert the row at.

Exit : Carry flag set to indicate edit buffer rows were shifted.

| | | |

Retrieve the flags status (zero flag set if deleting from the row matching the cursor position). A=Character to insert. Jump back if not deleting from the row matching the cursor position, i.e. all rows after the cursor have not yet been shifted. |

[BUG] - The 'line altered' flag is not cleared when an 'edited' null line is entered. To reproduce the bug, insert a couple of BASIC lines, type a character, delete it, and then cursor up or down onto a program line. The line is considered to have been changed and so is processed as if it consists of characters. Further, when cursor down is pressed to move to a BASIC line below, that line is deemed to have changed and hence moving off from it causing that line to be re-inserted into the BASIC program. Credit: Ian Collier (+3), Paul Farrow (128)] [The fix for the bug is to check whether all characters have been deleted from the line and if so to reset the 'line altered' flag. This would require the following code to be inserted at this point. Credit: Paul Farrow. PUSH DE LD HL,\$0020 ADD HL,DE ; Point to the flag byte for this row. POP DE BIT 0,(HL) ; First row of BASIC line in addition to the last? JR Z,SKIP_CLEAR ; Jump ahead if not. LD B,\$00 CALL \$2E79 (ROM 0) ; Is this a blank row? i.e. Find editable position on this row to the right, returning column number in B.

JR C,SKIP_CLEAR ; Jump if a character exists on the line. LD HL,\$EC0D RES 3,(HL) ; Signal that the current line has not been altered. SKIP_CLEAR: XOR A ; Set the preferred column to 0.]

| | |
|--------|---|
| SCF | [Redundant since never subsequently checked] |
| POP BC | Retrieve initial cursor row and column numbers. |

| | CALL L3117 | Shift up rows of the BASIC line in the Below-Screen Line Edit Buffer, or insert the next line BASIC line if buffer empty. |

JP L1667

Shift Screen Line Edit Buffer rows up from row specified by B and update the display file if required. [Could have saved 3 bytes by replacing the instructions CALL \$3117 (ROM 0) / JP \$1667 (ROM 0) with JP \$1664 (ROM 0)]

DELETE-WORD-LEFT Key Handler Routine

This routine deletes to the start of the current word that the cursor is on, or if it is on the first character of a word then it deletes to the start of the previous word. Since the function works by deleting one character at a time, display file updates are disabled whilst the function is executing to prevent screen flicker. If there is no word to delete then an error beep is requested.

Symbol:

← DEL
←

Exit: Carry flag reset to indicate to produce an error beep and set not to produce an error beep.

| | | |
|--------|-------------|---|

|--------|---------------------------------------|---|

Find Position within Screen Line Edit Buffer

Find the address of a specified row and column in the Screen Line Edit Buffer.

The routine calculates $DE = \$EC16 + \$0023 * C + B$.

Entry: B=Column number.

C=Row number.

Exit : HL=Address of specified position.

[Not used by the ROM]

| | | |
|--------|--|--|
| L30FE: | PUSH DE CALL L30EC LD H,\$00 LD L,B ADD HL,DE POP DE RET | DE=Start address in Screen Line Edit Buffer of the row specified in C. DE = $\$EC16 + \$0023 * C + B$. |
|--------|--|--|

Below-Screen Line Edit Buffer Settings

This table holds the default values for the Below-Screen Line Edit Buffer settings starting at \$F6F5. It should only contain a table of 3 bytes to tie up with the space allocated within the Editor workspace variables at \$F6F5. As a result, the last 2 bytes will get copied into the Below-Screen Line Edit Buffer itself. It appears that the word at \$F6F6 is supposed to be a pointer to the next available or accessed location within the buffer but this facility is never used. Therefore the table need only be 1 byte long, in which case it would be more efficient for the routine at \$310E (ROM 0) to simply set the byte at \$F6F5 directly.

| | | |
|--------|--|---|
| L3108: | DEFB \$05 DEFB \$00 DEFW \$0000 DEFW \$F6F8 | Number of bytes in table. \$F6F5 = Number of rows held in the Below-Screen Line Edit Buffer. \$F6F6/7. Above-Screen Line Edit Buffer Settings

This table holds the default values for the Below-Screen Line Edit Buffer settings starting at \$F9DB. It appears that the word at \$F9DC is supposed to be a pointer to the next available or accessed location within the buffer but this facility is never used. Therefore the table need only be 1 byte long, in which case it would be more efficient for the routine at \$325A (ROM 0) to simply set the byte at \$F9DB directly.

Jump if the line does not exist. Store the line number found as the one at the top of screen. BC=New line number at top of screen. HL=Address of the Above-Screen Line Edit Buffer settings. Point to the first row of the Above-Screen Line Edit Buffer. Jump if the line did not exist. |
|--------|---|--|

The line specified as the one at the top of the screen does exist **[BUG]** - HL points to the start of the first row of the Above-Screen Line Edit Buffer but it should point to the settings fields 3 bytes earlier since the call to \$330E (ROM 0) will advance HL by 3 bytes. The bug manifests itself when modifying a BASIC line that spans off the top of the screen. It causes corruption to the line number, causing a new BASIC line to be inserted rather than updating the line being edited. When editing lines with a high line number, the corrupted line number can end up larger 9999 and hence the line is deemed invalid when Enter is pressed to insert the line into the BASIC program. The effects of the bug are often masked by the bug at \$2DD9 (ROM 0) which performs LD HL,(\$F9DB) instead of LD HL,\$F9DB and thereby fails to detect when the end of the Above-Screen Line Edit Buffer has been reached. The bug can be fixed by inserted three DEC HL instructions before the call to \$330E (ROM 0). Credit: Paul Farrow]

Shift Row Up into the Above-Screen Line Edit Buffer if Required

This routine is used to shift up a Screen Line Edit Buffer or a Below-Screen Line Edit Buffer row into the Above-Screen Line Edit Buffer.

If shifting the top row of the Screen Line Edit Buffer would result in a straggle into the Above-Screen Line Edit Buffer then the top row is shifted into the next available location within the Above-Screen Line Edit Buffer. If the shift would place the start of a BASIC line on the top row then the Above-Screen Line Edit Buffer is set as empty.

The routine is also called when relisting the BASIC program. The first BASIC line may straggle above the screen and so it is necessary to load the BASIC line into the Above-Screen Line Edit Buffer. This is achieved by using the Below-Screen Line Edit Buffer as a temporary line workspace. This routine is called to shift each row into the Above-Screen Line Edit Buffer as appropriate.

Entry: DE=Start address of the first row in the Screen Line Edit Buffer, or start address of a Below-Screen Line Edit Buffer row.

Exit : HL=Address of next row to use within the Below-Screen or Screen Line Edit Buffer.

Carry flag set if the Line Edit Buffer if not full.

Copy the routine to RAM bank 7 at address \$FCAE. |
|--------|--|--|

Insert Keyword Representation into Keyword Construction Buffer « RAM Routine »

This routine copies a keyword string from ROM 1 into the Keyword Construction Buffer, terminating it with an 'end of BASIC line' marker (code ' ' + \$80). Only standard Spectrum keywords are handled by this routine (SPECTRUM and PLAY are processed elsewhere).

The routine is run from RAM bank 7 at \$FCAE so that access to both ROMs is available.

Depending on the value of A (which should be the ASCII code less \$A5, e.g. 'RND', the first (48K) keyword, has A=0), a different index into the token table is taken. This is to allow speedier lookup since there are never more than 15 keywords to advance through.

Entry: A=Keyword character code-\$A5 (range \$00-\$5A).

DE=Insertion address within Keyword Construction Buffer.

Copied to physical RAM bank 7 at \$FCAE-\$FCFC by subroutine at \$3397 (ROM 0).

Copy Keyword Characters « RAM Routine »

This routine copies a keyword string from ROM 1 into the Keyword Construction Buffer, terminating it with an 'end of BASIC line' marker (code ' '+\$80).

A leading space will be inserted if required and a trailing space is always inserted.

The routine is run from physical RAM bank 7 so that access to both ROMs is available.

Entry: HL=Address of keyword string in ROM 1.

DE=Insertion address within Keyword Construction Buffer.

Copied to physical RAM bank 7 at \$FCFD-\$FD2D by subroutine at \$3397 (ROM 0).

| | | |
|--------|----------------|--|
| L33FB: | LD DE,\$FCA3 | DE=Keyword Construction Buffer. |
| | LD (\$FCA1),DE | Store the start address of the constructed keyword. |
| | LD A,(\$FC9E) | Print a leading space? |
| | OR A | |
| | LD A,\$00 | |
| | LD (\$FC9E),A | Signal leading space not required. |
| | JR NZ,L3411 | Jump if leading space not required. |
| | LD A,\$20 | Print a leading space. |
| | LD (DE),A | Insert a leading space. |
| | INC DE | Advance to next buffer position. |
| L3411: | LD A,(HL) | Fetch a character of the keyword. |
| | LD B,A | Store it. |
| | INC HL | Advance to next keyword character. |
| | LD (DE),A | Store the keyword character in the BASIC line buffer. |
| | INC DE | Advance to the next buffer position. |
| | AND \$80 | Test if the end of the keyword string. |
| | JR Z,L3411 | Jump back if not to repeat for all characters of the keyword. |
| | LD A,B | Get keyword character back. |
| | AND \$7F | Mask off bit 7 which indicates the end of string marker. |
| | DEC DE | Point back at the last character of the keyword copied into the buffer |
| | LD (DE),A | and store it. |
| | INC DE | Advance to the position in the buffer after the last character of the keyword. |
| | LD A,' '+\$80 | \$A0. Space + end marker. |
| | LD (DE),A | Store an 'end of BASIC line so far' marker. |
| | LD A,\$07 | |

Create Next Line Number Representation in Keyword Construction Buffer

This routine is used to create a string representation of the line number for the next line after the specified line, and store it in the Keyword Construction Buffer.

Entry: HL=Line number.
A=Print leading space flag (\$00=Print leading space).
Exit : Carry flag set to indicate specified line available.
DE=Points to the command field of the BASIC line.
HL=Line number.

| | | |
|--------|---------------|--|
| L3468: | CALL L3522 | Clear BASIC line construction pointers (address of next character in the Keyword Construction Buffer and the address of the next character in the BASIC line within the program area being de-tokenized). |
| | OR A | [BUG] - Supposed to be XOR A to ensure that a leading space is shown before a command keyword is printed. However, most of the time the A register will enter the routine holding \$00 and so the bug is probably harmless. Credit: Paul Farrow |
| | LD (\$FC9E),A | Print a leading space flag. |
| | CALL L1F3F | Use Normal RAM Configuration (physical RAM bank 0). |
| | CALL L352E | Find address of the specified BASIC line, into HL. |
| | JR NC,L34C9 | Jump if suitable line number not found, i.e. end of program reached. |
| | JR NZ,L3485 | Jump if line number did not match, i.e. is higher than the line requested. |

The line number requested exists

| | |
|------------|--|
| LD A,B | BC=Line number. |
| OR C | |
| JR Z,L3485 | Jump if the first program line requested (line number of 0). |

Fetch the next line

| | |
|-------------|--|
| CALL L3507 | Move to the start of the next BASIC line. |
| CALL L3511 | Check whether at the end of the BASIC program. |
| JR NC,L34C9 | Jump if at the end of the BASIC program. |

Insert line number into the BASIC Line Construction Buffer

| | | |
|--------|----------------|--|
| L3485: | LD D,(HL) | HL=Address of the BASIC line. |
| | INC HL | |
| | LD E,(HL) | DE=Line number. |

| | PUSH DE | Save the line number. |
| | PUSH HL | Save the address of the BASIC line+1. |
| | PUSH IX | Save IX. |
| | LD IX,\$FCA3 | IX=Keyword Construction Buffer, the location where the line number will be created. |
| | LD (\$FCA1),IX | Store the start of the buffer as the next location to store a character in. |
| | EX DE,HL | HL=Line number. |
| | LD B,\$00 | Signal no digit printed yet. |
| | LD DE,\$FC18 | -1000. |
| | CALL L34CD | Insert the thousand digit. |
| | LD DE,\$FF9C | -100. |
| | CALL L34CD | Insert the hundred digit. |
| | LD DE,\$FFF6 | -10. |
| | CALL L34CD | Insert the ten digit. |
| | LD DE,\$FFFF | -1. |
| | CALL L34CD | Insert the units digits. [Note that this is not designed to handle line number 0, which technically is not supported by Sinclair BASIC. The call would need to be preceded by a LD B,\$01 instruction to make this function support a line number of 0. Credit: Ian Collier (+3), Andrew Owen (128)] |
| | | IX points to previous ASCII digit. |
| | DEC IX | |
| | LD A,(IX+\$00) | |
| | OR \$80 | |
| | LD (IX+\$00),A | Set bit 7 to mark it as the end of the line number representation. |
| | POP IX | Restore registers. |
| | POP HL | HL=Address of the BASIC line+1. |
| | POP DE | DE=Line number. |
| | INC HL | HL=Points to length field of the BASIC line. |
| | INC HL | |
| | INC HL | HL=Points to the command field of the BASIC line. |
| | LD (\$FC9F),HL | Store it as the next character to fetch when parsing the BASIC line to de-tokenize it. |
| | EX DE,HL | DE=Points to the command field of the BASIC line, HL=Line number. |
| | SCF | Signal line exists. |
| | RET | |

End of program reached, no line number available

| | | |
|--------|------------|---|
| L34C9: | CALL L1F64 | Use Workspace RAM configuration (physical RAM bank 7). |
| | RET | Return with carry flag reset to signal line does not exist. |

Insert ASCII Line Number Digit

Insert text representation of a line number digit in a buffer.

Insert a \$00 character for every leading zero.

Entry: DE=Subtraction amount (-1000, -100, -10, -1).
 HL=Line number.
 IX=Address of the buffer to write the ASCII line number to.
 B=Indicates if digit printed yet (\$00=not printed).

Exit : IX points to next buffer location.
 B=\$01 if digit printed.
 HL=Line number remainder.

| | | |
|--------|------------|---|
| L34CD: | XOR A | A=Counter. |
| L34CE: | ADD HL,DE | Keep adding DE |
| | INC A | and incrementing the counter |
| | JR C,L34CE | until there is no carry. |
| | SBC HL,DE | Adjust for the last addition and. |
| | DEC A | counter value that caused the overflow. |

A=Number of multiples of DE in the line number

| | | |
|--------|----------------|--|
| | ADD A,\$30 | Convert to an ASCII digit. |
| | LD (IX+\$00),A | Store in the buffer. |
| | CP '0' | \$30. Is it a zero? |
| | JR NZ,L34E9 | Jump ahead if not. |
| | LD A,B | Get the 'digit printed' flag. |
| | OR A | |
| | JR NZ,L34EB | Jump ahead if already printed a digit. |
| | LD A,\$00 | Otherwise this is a leading zero, so |
| | LD (IX+\$00),A | store a zero byte to indicate 'nothing to print'. |
| | JR L34EB | and jump ahead to point to the next buffer location. |
| L34E9: | LD B,\$01 | Indicate 'digit printed'. |
| L34EB: | INC IX | Point to the next buffer location. |
| | RET | |

Find Address of BASIC Line with Specified Line Number

This routine finds the address of the BASIC line in the program area with the specified line number, or the next line is the specified one does not exist.

Entry: HL=Line number.
 A=\$00 to print a leading space.
 Exit : Carry flag set if line exists.
 DE=Points to the command of the BASIC line within the program area.
 HL=Line number.

| | | |
|--------|---------------|---|
| L34EE: | CALL L3522 | Clear BASIC line construction pointers (address of next character in the Keyword Construction Buffer and the address of the next character in the BASIC line within the program area being de-tokenized). |
| | OR A | [BUG] - Supposed to be XOR A to ensure that a leading space is shown before a command keyword is printed. However, most of the time the A register will enter the routine holding \$00 and so the bug is probably harmless. Credit: Paul Farrow] |
| | LD (\$FC9E),A | Store 'print a leading space' flag. |
| | CALL L1F3F | Use Normal RAM Configuration (physical RAM bank 0). |
| | CALL L352E | Find the address of the BASIC line with this line number, or the next line otherwise. |
| | JR NC,L34C9 | Jump if does not exist. |
| | EX DE,HL | HL=Address of BASIC line. |
| | LD A,L | |
| | OR H | Address of \$0000, i.e. no line exists? |
| | SCF | Assume line number found. |
| | JP NZ,L3485 | Jump if a line was found. |
| | CCF | Reset carry flag to indicate line number does not exist |
| | JR L34C9 | and jump to make a return. |

Move to Next BASIC Line

| | | |
|--------|-----------|--|
| L3507: | PUSH HL | Save the address of the original line. |
| | INC HL | Skip past the line number. |
| | INC HL | |
| | LD E,(HL) | Retrieve the line length into DE. |
| | INC HL | |

| | |
|-----------|--------------------------------------|
| LD D,(HL) | |
| INC HL | |
| ADD HL,DE | Point to the start of the next line. |
| POP DE | DE=Address of original line. |
| RET | |

Check if at End of BASIC Program

Check whether at the end of the BASIC program.

Entry: HL=Address of BASIC line.

Exit : Carry flag reset if end of BASIC program reached.

| | | |
|--------|-----------|----------------------------------|
| L3511: | LD A,(HL) | |
| | AND \$C0 | |
| | SCF | Signal not at end of BASIC. |
| | RET Z | Return if not at end of program. |
| | CCF | Signal at end of BASIC. |
| | RET | |

Compare Line Numbers

Compare line number at (HL) has line number held in BC.

Entry: HL=Address of first line number.

BC=Second line number.

Exit : Carry flag and zero flag set if the line number matches.

Zero flag reset if no match, with carry flag set if line number held in BC is lower than the line number pointed to by HL.

| | | |
|--------|---------|-----------------------------|
| L3518: | LD A,B | Test the first byte. |
| | CP (HL) | |
| | RET NZ | Return if not the same. |
| | LD A,C | Test the second byte. |
| | INC HL | |
| | CP (HL) | |
| | DEC HL | |
| | RET NZ | Return if not the same. |
| | SCF | Signal line number matches. |

| | CALL L3511 | Test for end of BASIC program. |
| | RET NC | Return if at end of program. |
| | CALL L3518 | Compare line number at (HL) with BC. |
| | JR NC,L3542 | If line number not the same or greater then back to test next line. |
| | RET | Exit with carry flag set if line found. |

Fetch Next De-tokenized Character from BASIC Line in Program Area

This routine translates a tokenized BASIC line within the program area into the equivalent 'typed' line, i.e. non-tokenized.

The line number has been previously converted into a string representation and is held within the Keyword Construction Buffer at \$FCA3. On each call of this routine, the next character of the BASIC line representation is fetched. Initially this is the line number characters from the Keyword Construction Buffer, and then the characters from the program line itself. As a token character is encountered, it is converted into its string representation and stored in the Keyword Construction Buffer. Then each character of this string is fetched in turn. Once all of these characters have been fetched, the next character will be from the last position accessed within the BASIC line in the program area.

Exit: Carry flag set to indicate that a character was available.

A=Character fetched.

| | | |
|--------|----------------|--|
| L354F: | LD HL,(\$FCA1) | Fetch the address of the character within the Keyword Construction Buffer. |

'Enter' Action Handler Routine

| | | |
|--------|---|---|
| L3604: | CALL L361E LD A,(HL) OR \$18 LD (HL),A LD HL,\$FD6A SET 0,(HL) SCF RET | Null remaining column positions in the edit buffer row. Fetch the flag byte. Signal associated line number and last row in the BASIC line. Update the flag byte. [Redundant since flag never subsequently tested. Deleting these instructions would have saved 5 bytes] Flag possibly intended to indicate the start of a new BASIC line and hence whether indentation required. Signal no more characters are available, i.e. end of line. |
|--------|---|---|

'Null Columns' Action Handler Routine

| | | |
|--------|--|--|
| L3612: | CALL L361E SET 3,(HL) LD HL,\$FD6A SET 0,(HL) SCF RET | Null remaining column positions in the edit buffer row. Signal last row of the BASIC line in the row flag byte. [Redundant since flag never subsequently tested. Deleting these instructions would have saved 5 bytes] Flag possibly intended to indicate the start of a new BASIC line and hence whether indentation required. Signal no more characters are available, i.e. end of line. |
|--------|--|--|

Null Column Positions

This routine inserts null characters into the remainder of a line edit buffer row.

| | |
|--------|---|
| Entry: | B=Initial column to null. DE=Address of start of edit row. |
| Exit : | HL=Address of the row's flag byte. |

| | | |
|--------|---|---|
| L361E: | LD L,B LD H,\$00 ADD HL,DE LD A,\$20 | HL=Number of columns. Point to column position in line edit buffer row. 32 columns. |
|--------|---|---|

| | | |
|--------|---------------|------------------------------------|
| L3624: | CP B | Found specified column? |
| | RET Z | Return if so. |
| | LD (HL), \$00 | Store a null in the location. |
| | INC HL | Next buffer position. |
| | INC B | Increment column position counter. |
| | JR L3624 | Repeat for next column. |

Indent Edit Buffer Row

Indent a row by setting the appropriate number of characters in an edit buffer row to nulls, i.e. character \$00.

Entry: DE=Address of row within edit buffer.

Exit : B=First usable column number in the row.

| | | |
|--------|----------------|--|
| L362C: | LD A, (\$FD6B) | Get the number of indentation columns. |
| | LD B, \$00 | Start at first column. |
| L3631: | LD H, \$00 | |
| | LD L, B | HL=Column position. |
| | ADD HL, DE | |
| | LD (HL), \$00 | Put a null in the column position. |
| | INC B | Next position. |
| | DEC A | |
| | JR NZ, L3631 | Repeat for all remaining columns. |
| | RET | |

Print Edit Buffer Row to Display File if Required

Print a row of the edit buffer to the display file if required.

Entry: HL=Address of edit buffer row.

| | | |
|--------|---------------|---|
| L363C: | PUSH BC | Save registers. |
| | PUSH DE | |
| | PUSH HL | |
| | PUSH HL | Save edit buffer row address. |

| | LD HL,\$5C41 | MODE. |
| | RES 0,(HL) | Remove extended mode. |
| | CP \$20 | Is it a control code? |
| | JR NC,L36DA | Jump if not to accept all characters and token codes (used for the keypad). |
| | CP \$10 | Is it a cursor key? |
| | JR NC,L36B8 | Jump back if not to wait for another key. |
| | CP \$06 | Is it a cursor key? |
| | JR C,L36B8 | Jump back if not to wait for another key. |

Control code or cursor key

| | | |
|--------|---------------|---|
| | CALL L36DC | Handle CAPS LOCK code and 'mode' codes. |
| | JR NC,L36B8 | Jump back if mode might have changed. |
| L36DA: | POP HL | Restore contents of HL. |
| | RET | |
| L36DC: | RST 28H | |
| | DEFW KEY_M_CL | \$10DB. Handle CAPS LOCK code and 'mode' codes via ROM 1. |
| | RET | |

MENU ROUTINES — PART 5

Display Menu

HL=Address of menu text.

| | | |
|--------|--------------|--|
| L36E0: | PUSH HL | Save address of menu text. |
| | CALL L3773 | Store copy of menu screen area and system variables. |
| | LD HL,\$5C3C | TVFLAG. |
| | RES 0,(HL) | Signal using main screen. |
| | POP HL | HL=Address of menu text. |
| | LD E,(HL) | Fetch number of table entries. |

| | | |
|--------|--------------|--|
| | INC HL | Point to first entry. |
| | PUSH HL | |
| | LD HL,L3824 | Set title colours. |
| | CALL L376B | Print them. |
| | POP HL | |
| | CALL L376B | Print menu title pointed to by HL. |
| | PUSH HL | |
| | CALL L385A | Print Sinclair stripes. |
| | LD HL,L3832 | Black ' '. |
| | CALL L376B | Print it. |
| | POP HL | HL=Address of first menu item text. |
| | PUSH DE | Save number of menu items left to print. |
| | LD BC,\$0807 | |
| | CALL L3763 | Perform 'Print AT 8,7;' (this is the top left position of the menu). |
| L3709: | PUSH BC | Save row print coordinates. |
| | LD B,\$0C | Number of columns in a row of the menu. |
| | LD A,\$20 | Print ' '. |
| | RST 10H | |
| L370F: | LD A,(HL) | Fetch menu item character. |
| | INC HL | |
| | CP \$80 | End marker found? |
| | JR NC,L3718 | Jump if end of text found. |
| | RST 10H | Print menu item character |
| | DJNZ L370F | Repeat for all characters in menu item text. |
| L3718: | AND \$7F | Clear bit 7 to yield a final text character. |
| | RST 10H | Print it. |
| L371B: | LD A,\$20 | |
| | RST 10H | Print trailing spaces |
| | DJNZ L371B | Until all columns filled. |
| | POP BC | Fetch row print coordinates. |
| | INC B | Next row. |
| | CALL L3763 | Print AT. |
| | DEC E | |
| | JR NZ,L3709 | Repeat for all menu items. |
| | LD HL,\$6F38 | Coordinates, pixel (111, 56) = end row 13, column 7. |
| | POP DE | Fetch number of menu items to E. |
| | SLA E | |
| | SLA E | |
| | SLA E | |
| | LD D,E | Determine number of pixels to span all menu items. |
| | DEC D | |
| | LD E,\$6F | D=8*Number of menu items - 1. |
| | LD BC,\$FF00 | Number of pixels in width of menu. |
| | LD A,D | B=-1, C=0. Plot a vertical line going up. |
| | CALL L3751 | A=Number of vertical pixels to plot. |
| | LD BC,\$0001 | Plot line. |
| | LD A,E | B=0, C=1. Plot a horizontal line going to the right. |
| | CALL L3751 | A=Number of horizontal pixels to plot. |
| | LD BC,\$0100 | Plot line. |
| | LD A,D | B=1, C=0. Plot a vertical line going down. |
| | INC A | A=Number of vertical pixels to plot. |
| | CALL L3751 | Include end pixel. |
| | XOR A | Plot line. |
| | CALL L3802 | A=Index of menu option to highlight. |
| | RET | Toggle menu option selection so that it is highlight. |
| | | [Could have saved one byte by using JP \$3802 (ROM 0)] |

Plot a Line

| | | |
|--------|---------|--------------------|
| L3751: | PUSH AF | Save registers. |
| | PUSH HL | |
| | PUSH DE | |
| | PUSH BC | |
| | LD B,H | Coordinates to BC. |
| | LD C,L | |

Tokens Using Line Numbers

A list of all tokens that maybe followed by a line number and hence require consideration.

| | | |
|--------|-----------|------------|
| L393A: | DEFB \$CA | 'LINE'. |
| | DEFB \$F0 | 'LIST'. |
| | DEFB \$E1 | 'LLIST'. |
| | DEFB \$EC | 'GO TO'. |
| | DEFB \$ED | 'GO SUB'. |
| | DEFB \$E5 | 'RESTORE'. |
| | DEFB \$F7 | 'RUN'. |

Parse a Line Renumbering Line Number References

This routine examines a BASIC line for any tokens that may be followed by a line number reference and if one is found then the new line number is calculated and substituted for the old line number reference. Although checks are made to ensure an out of memory error does not occur, the routine simply returns silently in such scenarios and the renumber routine will continue onto the next BASIC line.

Entry: HL=Address of current character in the current BASIC line.
A=Current character.

| | | |
|--------|-----------------|--|
| L3941: | INC HL | Point to the next character. |
| | LD (HD_11+1),HL | \$5B79. Store it. |
| | EX DE,HL | DE=Address of next character. |
| | LD BC,\$0007 | There are 7 tokens that may be followed by a line number, and these are listed in the table at \$393A (ROM 0). |
| | LD HL,L393A | |
| | CPIR | Search for a match for the current character. |
| | EX DE,HL | HL=Address of next character. |
| | RET NZ | Return if no match found. |

A token that might be followed by a line number was found. If it is followed by a line number then proceed to renumber the line number reference. Note that the statements such as GO TO VAL "100" will not be renumbered. The line numbers of each BASIC line will be renumbered as the last stage of the renumber process at \$3905 (ROM 0).

EDITOR ROUTINES — PART 5

Tokenize BASIC Line

This routine serves two purposes. The first is to tokenize a typed BASIC line into a tokenized version. The second is when a syntax error is subsequently detected within the tokenized line, and it is then used to search for the position within the typed line where the error marker should be shown.

This routine parses the BASIC line entered by the user and generates a tokenized version in the workspace area as pointed to by system variable E_LINE. It suffers from a number of bugs related to the handling of '>' and '<' characters. The keywords '<>', '>=' and '<=' are the only keywords that do not commence with letters and the routine traps these in a different manner to all other keywords. If a '<' or '>' is encountered then it is not immediately copied to the BASIC line workspace since the subsequent character must be examined as it could be a '>' or '=' character and therefore might form the keywords '<>', '>=' or '<='. A problem occurs if the subsequent character is a letter since the parser now expects the start of a possible keyword. It should at this point insert the '<' or '>' into the BASIC line workspace but neglects to do this. It is only when the next non-letter character is encountered that the '<' or '>' gets inserted, but this is now after the previously found string has been inserted. This results the following types of errors:

'PRINT varA>varB' is seen by the parser as 'PRINT varAvarB>' and hence a syntax error occurs.

'PRINT varA>varB1' is seen by the parser as 'PRINT varAvarB>1' and hence is accepted as a valid statement.

A work-around is to follow the '<' or '>' with a space since this forces the '<' or '>' to be inserted before the next potential keyword is examined.

A consequence of shifting a '<' or '>' is that a line such as 'PRINT a\$b\$b\$' is seen by the parser as 'PRINT a\$b\$b\$>' and so it throws a syntax error.

The parser saved the '>' character for consideration when the next character was examined to see if it was part of the keywords '<>', '>=' or '<=', but fails to discard it if the end of the statement is immediately encountered. Modifying the statement to a form that will be accepted will still cause a syntax error since the parser mistakenly believes the '>' character applies to this statement.

The parser identifies string literals contained within quotes and will not tokenize any keywords that appear inside them, except for the keywords "<>", "<=" and ">=" which it neglects to check for. Keywords are also not tokenized following a REM statement, except again for "<>", "<=" and ">=", until the end of the line is reached. This differs slightly to 48K BASIC mode. In 48K BASIC mode, typing a ':' following a REM statement will cause a change from 'L'

SPANISH SPECTRUM +2 ROM 0 DISASSEMBLY

cursor mode to 'K' cursor mode and hence the next key press results in a keyword token being inserted. In 128K BASIC mode, typing a ':' will not change to 'K' cursor mode and hence the next key press will just be the letter, number or symbol. This does not affect the running of the program since 48K BASIC mode will ignore all characters after a REM command until the end of the line. However, creating such a REM statement in 128K BASIC mode that appears similar to one created in 48K BASIC mode will result in more memory being used since the 'keyword' must be spelled out letter by letter. When being used to locate the error marker position, the same process is performed as when tokenizing but no characters are actually inserted into the workspace (they are still there from when the line was originally tokenized). Instead, a check is made after each character is processed to see if the error marker address held in system variable X_PTR has been reached. If it does match then the routine returns with BC holding the character position where the error marker should be displayed at.

Entry point - A syntax error was detected so the error marker must be located

| | | |
|--------|-----------------------|---|

Store the stack pointer. Clear BASIC line construction pointers (address of next character in the Keyword Construction Buffer and the address of the next character in the BASIC line within the program area being de-tokenized). [Could have saved 1 byte by using XOR A] Signal last character was not a keyword and was not a space. [BUG - Should reset the '<' and '>' store at \$FD89 to \$00 here. Attempting to insert a BASIC line such as 'PRINT VAL a\$>b' will fail since the parser does not like '>' immediately after 'a\$', due to the bug at \$3C71 (ROM 0). The parser stores the '>' in \$FD89 since it will check the following character in case it should replace the two characters with the token '<>', '>=' or '<='. After the parser throws the syntax error, it does not clear \$FD89 and so even if the line is modified such that it should be accepted, e.g. 'PRINT VAL a\$=b', the parser believes the line is really '>PRINT VAL n\$=b' and so throws another syntax error. Since a letter follows the '>', the contents of \$FD89 will get cleared and hence a second attempt to insert the line will now succeed. Credit: Paul Farrow] HL=Start address of the Keyword Conversion Buffer. Store as the next available location. Use Normal RAM Configuration (physical RAM bank 0). \$16B0. Clear the editing areas. Insert the character

L3C71:

[BUG - At this point a '>' or '<' that was previously stored should be inserted into the BASIC line workspace. However, the routine proceeds with the new potential keyword and this is entered into the BASIC line workspace next. The '>' or '<' will only be inserted when the next non-letter character is encountered. This causes an expression such as 'a>b1' to be translated into 'ab>1'. Credit: Ian Collier (+3), Paul Farrow (128)] [The bug can be fixed by testing if whether a '<' or '>' character is stored. Credit: Paul Farrow.

| JR NZ,L3D29 | Jump if not. |
| POP BC | Retrieve the character to insert and the character status value. |
| JR L3D48 | Jump ahead to continue. |

The space is not at the start of the Keyword Conversion Buffer, i.e. the buffer contains another word after the space.

The first word has already been copied to the BASIC line workspace so now copy the second word to the start of the Keyword Conversion Buffer and then see if it is a valid keyword. [It is not recommended to name a variable as per a keyword since statements such as 'PRINT then' will fail the syntax check since the variable 'then' is interpreted as the keyword 'THEN' and so the statement is seen as 'PRINT THEN', which in this case is invalid.] HL points to the start of the Keyword Conversion Buffer. DE points to the space between the two words.

| | | |
|--------|----------------|--|
| L3D29: | LD A,(DE) | Fetch a character from the second word. |
| | LD (HL),A | Store it at the beginning of the buffer. |
| | INC HL | |
| | INC DE | |
| | AND \$80 | Reached the last character in the buffer, i.e. the terminator bit set? |
| | JR Z,L3D29 | Jump if not to copy the next character. |
| | LD (\$FD7D),HL | Store the new address of the next free location. |
| | JR L3CB7 | Jump back to attempt identification of the 'second' word as a keyword. |

The string in the Keyword Conversion Buffer was identified as a keyword, so insert the token character code of the keyword into the BASIC line workspace.
A=Character code of identified token.

| | | |
|--------|------------|---|
| L3D36: | PUSH BC | Save the next character to insert and the character status value. |
| | CALL L3DCF | Insert character held in A into BASIC line workspace. |
| | POP BC | Retrieve the next character to insert and the character status value. |

The token has been inserted into the BASIC line workspace so reset the Keyword Conversion Buffer

| | | |
|--------|----------------|---|
| | LD HL,\$0000 | |
| | LD (\$FD7F),HL | Indicate no space character between words in the Keyword Conversion Buffer. |
| | LD A,(\$FD81) | Fetch the flag bits. |

|--------|---------|-------------------------------|
| L3DCF: | PUSH AF | Save the character to insert. |
|--------|---------|-------------------------------|

[BUG - The string characters "<>", "<=" and ">=" get tokenized to a single character '<>', '<=' and '>=' respectively even within quotes or a REM statement. Credit: Paul Collins (+3), Paul Farrow (128)] **[BUG** - 128 BASIC mode handles a colon character found following a REM statement differently to 48K mode. In 48K mode, typing a colon returns the cursor into 'K' mode and hence the next key press inserts a keyword token. In 128K mode, typing a colon does not cause the characters following it to be interpreted as a possible keyword. There is no noticeable difference when executing the REM statement since subsequent statements are ignored following a REM command. However, for consistency the 128K mode editor ought to generate identical BASIC lines to those that would be created from 48K mode. | SCF | |
| CCF | Carry flag reset to indicate tokenizing complete. |
| RET | |

Insert Character into BASIC Line Workspace With Space Suppression

This routine is called to insert a character into the BASIC line workspace, suppressing both leading and trailing spaces around tokens, e.g. 'PRINT 10' does not require a space stored between 'PRINT' and '10' within the BASIC line.

The routine maintains two flags which indicate whether the last character was a space or was a token. Whenever a space is encountered, it is noted but not inserted straight away. It is only after the subsequent character is examined that the routine can determine whether the space should or should not be inserted.

Entry: A=Character to insert.

|--------|---|--|

Insert a Character into BASIC Line Workspace

This routine is called for two purposes. The first use is for inserting a character or token into the BASIC line workspace (situated at E_LINE).

The second use is after a syntax error has been identified within the tokenized BASIC line in the workspace and the location of the error marker needs to be established. For the second case, the system variable X_PTR holds the address of where the error occurred within the tokenized BASIC line in the workspace.

The Editor needs to identify how many characters there are before the equivalent error position is reached within the typed BASIC line. To locate it, the typed BASIC line is re-parsed but this time without inserting any characters into the BASIC line workspace, since this still contains the tokenized line from before. This tokenized line will now also include embedded floating point numbers for any numeric literals contained within the BASIC line. As the

typed line is re-parsed, a count of the characters examined so far is kept and instead of inserting tokenized characters within the BASIC line workspace, a check is made to see whether the insertion location has reached the address of the error marker. If it has then the parsing of the BASIC line terminates and the count of the typed line characters indicates the equivalent position within it of the error. However, should the last character have been a token then the typed line count will also include the number of characters that form the keyword, and so this must be subtracted from the count.

Entry: A=Character to insert.

DE=Address of insertion position within the BASIC line workspace.

Exit : If searching for the error marker position and it is found then a return is made directly to the top level calling routine with BC holding the number of characters in

the typed BASIC line prior to the equivalent error marker position.

The error marker has been reached

[BUG] - The desired character count until the error marker is held at address \$FD85 and needs the length of the last character to be removed from it, which for a token would be several bytes. However, the routine simply returns the lower of the tokenized and typed counts, and this yields very unhelpful error marker positions shown within the typed BASIC line. Credit: Ian Collier (+3), Andrew Owen (128)] [The code below up until the instruction at \$3EE3 (ROM 0) should have been as follows. Changes to the code at \$3D86 (ROM 0) are also required. Credit: Paul Farrow.

Searching for the error marker so need to consider embedded floating point numbers

[BUG] - This should fetch the next character from the tokenized BASIC line and not the current character. This routine is called to process every visible character in the BASIC line, but is not called for embedded floating point numbers. It must therefore test whether the current character is followed by an embedded floating point number and if so to skip over it. The routine does make an attempt to detect embedded floating point numbers but incorrectly performs the test on the visible character and not the character that follows it. The bug can be fixed as replacing the LD A,(HL) instruction with the following instructions. Credit: Paul Farrow.

| | |
|---|---|
| INC HL LD A,(HL) DEC HL | Advance to the next character in the tokenized BASIC line. Fetch the next character in the tokenized BASIC line. Point back to the current character in the tokenized BASIC line.] |
| LD A,(HL) EX DE,HL CP \$0E JR NZ,L3F16 INC DE INC DE INC DE INC DE INC DE JR L3F16 | Fetch the current character in the tokenized BASIC line. DE=Insert position within the tokenized BASIC line. Is it the 'number' marker? Jump ahead if not. Skip over the 5 byte hidden number representation. [BUG] - There should be another INC DE instruction here to take into account the character that the tokenizer would have inserted. As a result, the attempt to locate the error marker location will drift off by one byte for every numeric literal within the BASIC statement, and if there are many numeric literals in the statement then the error marker location may never be found before the end of the statement is parsed. Credit: Ian Collier (+3), Andrew Owen (128)] Jump ahead to continue. |

REFERENCE INFORMATION — PART 2

Routines Copied/Constructed in RAM

Construct Keyword Representation

This routine copies a keyword string from ROM 1 into the BASIC Line Construction Buffer, terminating it with an 'end of BASIC line' marker (code '\$80'). Only standard Spectrum keywords are handled by this routine (SPECTRUM and PLAY are processed elsewhere). The routine is run from RAM bank 7 at \$FCAE so that access to both ROMs is available.

SPANISH SPECTRUM +2 ROM 0 DISASSEMBLY

Depending on the value of A (which should be the ASCII code less \$A5, e.g. 'RND', the first (48K) keyword, has A=0), a different index into the token table is taken. This is to allow speedier lookup since there are never more than 15 keywords to advance through.

Entry: A=Keyword character code-\$A5 (range \$00-\$5A).

DE=Insertion address within BASIC Line Construction Buffer.

Copied to physical RAM bank 7 at \$FCAE-\$FCFC by routine at \$3397 (ROM 0).

Standard Error Report Codes

| | |
|---------------------------|--|
| 0 — OK | Successful completion, or jump to a line number bigger than any existing. |
| 1 — NEXT without FOR | The control variable does not exist (it has not been set up by a FOR statement), but there is an ordinary variable with the same name. |
| 2 — Variable not found | For a simple variable, this will happen if the variable is used before it has been assigned to by a LET, READ or INPUT statement, loaded from disk (or tape), or set up in a FOR statement. For a subscripted variable, it will happen if the variable is used before it has been dimensioned in a DIM statement, or loaded from disk (or tape). |
| 3 — Subscript wrong | A subscript is beyond the dimension of the array or there are the wrong number of subscripts. |
| 4 — Out of memory | There is not enough room in the computer for what you are trying to do. |
| 5 — Out of screen | An INPUT statement has tried to generate more than 23 lines in the lower half of the screen. Also occurs with 'PRINT AT 22,xx'. |
| 6 — Number too big | Calculations have yielded a number greater than approximately 10^{38} . |
| 7 — RETURN without GO SUB | There has been one more RETURN than there were GO SUBs. |
| 8 — End of file | Input returned unacceptable character code. |
| 9 — STOP statement | After this, CONTINUE will not repeat the STOP but carries on with the statement after. |
| A — Invalid argument | The argument for a function is unsuitable. |
| B — Integer out of range | When an integer is required, the floating point argument is rounded to the nearest integer. If this is outside a suitable range, then this error results. |
| C — Nonsense in BASIC | The text of the (string) argument does not form a valid expression. |
| D — BREAK - CONT repeats | BREAK was pressed during some peripheral operation. |
| E — Out of DATA | You have tried to READ past the end of the DATA list. |
| F — Invalid file name | SAVE with filename empty or longer than 10 characters. |
| G — No room for line | There is not enough room left in memory to accommodate the new program line. |
| H — STOP in INPUT | Some INPUT data started with STOP. |
| I — FOR without NEXT | A FOR loop was to be executed no times (e.g. FOR n=1 TO 0) and corresponding NEXT statement could not be found. |
| J — Invalid I/O device | Attempting to input characters from or output characters to a device that doesn't support it. |
| K — Invalid colour | The number specified is not an appropriate value. |
| L — BREAK into program | BREAK pressed. This is detected between two statements. |
| M — RAMTOP no good | The number specified for RAMTOP is either too big or too small. |
| N — Statement lost | Jump to a statement that no longer exists. |
| O — Invalid Stream | Trying to input from or output to a stream that isn't open or that is out of range (0...15), or trying to open a stream that is out of range. |
| P — FN without DEF | User-defined function used without a corresponding DEF in the program. |
| Q — Parameter error | Wrong number of arguments, or one of them is the wrong type. |
| R — Tape loading error | A file on tape was found but for some reason could not be read in, or would not verify. |

Standard System Variables

These occupy addresses \$5C00-\$5CB5.

| | | | | |
|--------|--------|----|---------|---|
| KSTATE | \$5C00 | 8 | IY-\$3A | Used in reading the keyboard. |
| LASTK | \$5C08 | 1 | IY-\$32 | Stores newly pressed key. |
| REPDEL | \$5C09 | 1 | IY-\$31 | Time (in 50ths of a second) that a key must be held down before it repeats. This starts off at 35. |
| REPPER | \$5C0A | 1 | IY-\$30 | Delay (in 50ths of a second) between successive repeats of a key held down - initially 5. |
| DEFADD | \$5C0B | 2 | IY-\$2F | Address of arguments of user defined function (if one is being evaluated), otherwise 0. |
| K_DATA | \$5C0D | 1 | IY-\$2D | Stores second byte of colour controls entered from keyboard. |
| TVDATA | \$5C0E | 2 | IY-\$2C | Stores bytes of colour, AT and TAB controls going to TV. |
| STRMS | \$5C10 | 38 | IY-\$2A | Addresses of channels attached to streams. |
| CHARS | \$5C36 | 2 | IY-\$04 | 256 less than address of character set, which starts with ' ' and carries on to '@'. |
| RASP | \$5C38 | 1 | IY-\$02 | Length of warning buzz. |
| PIP | \$5C39 | 1 | IY-\$01 | Length of keyboard click. |
| ERR_NR | \$5C3A | 1 | IY+\$00 | 1 less than the report code. Starts off at 255 (for -1) so 'PEEK 23610' gives 255. |
| FLAGS | \$5C3B | 1 | IY+\$01 | Various flags to control the BASIC system: Bit 0: 1=Suppress leading space. Bit 1: 1=Using printer, 0=Using screen. Bit 2: 1=Print in L-Mode, 0=Print in K-Mode. Bit 3: 1=L-Mode, 0=K-Mode. Bit 4: 1=128K Mode, 0=48K Mode. [Always 0 on 48K Spectrum] Bit 5: 1=New key press code available in LAST_K. Bit 6: 1=Numeric variable, 0=String variable. Bit 7: 1=Line execution, 0=Syntax checking. |
| TVFLAG | \$5C3C | 1 | IY+\$02 | Flags associated with the TV: Bit 0 : 1=Using lower editing area, 0=Using main screen. Bit 1-2: Not used (always 0). Bit 3 : 1=Mode might have changed. Bit 4 : 1=Automatic listing in main screen, 0=Ordinary listing in main screen. Bit 5 : 1=Lower screen requires clearing after a key press. Bit 6 : 1=Tape Loader option selected (set but never tested). [Always 0 on 48K Spectrum] Bit 7 : Not used (always 0). |
| ERR_SP | \$5C3D | 2 | IY+\$03 | Address of item on machine stack to be used as error return. |
| LISTSP | \$5C3F | 2 | IY+\$05 | Address of return address from automatic listing. |
| MODE | \$5C41 | 1 | IY+\$07 | Specifies cursor type: \$00='L' or 'C'. \$01='E'. \$02='G'. \$04='K'. |
| NEWPPC | \$5C42 | 2 | IY+\$08 | Line to be jumped to. |
| NSPPC | \$5C44 | 1 | IY+\$0A | Statement number in line to be jumped to. |
| PPC | \$5C45 | 2 | IY+\$0B | Line number of statement currently being executed. |
| SUBPPC | \$5C47 | 1 | IY+\$0D | Number within line of statement currently being executed. |
| BORDCR | \$5C48 | 1 | IY+\$0E | Border colour multiplied by 8; also contains the attributes normally used for the lower half of the screen. |
| E_PPC | \$5C49 | 2 | IY+\$0F | Number of current line (with program cursor). |
| VARs | \$5C4B | 2 | IY+\$11 | Address of variables. |
| DEST | \$5C4D | 2 | IY+\$13 | Address of variable in assignment. |
| CHANS | \$5C4F | 2 | IY+\$15 | Address of channel data. |
| CURCHL | \$5C51 | 2 | IY+\$17 | Address of information currently being used for input and output. |
| PROG | \$5C53 | 2 | IY+\$19 | Address of BASIC program. |
| NXTLIN | \$5C55 | 2 | IY+\$1B | Address of next line in program. |
| DATADD | \$5C57 | 2 | IY+\$1D | Address of terminator of last DATA item. |
| E_LINE | \$5C59 | 2 | IY+\$1F | Address of command being typed in. |
| K_CUR | \$5C5B | 2 | IY+\$21 | Address of cursor. |

SPANISH SPECTRUM +2 ROM 0 DISASSEMBLY

| | | | | |
|--------|--------|---|---------|--|
| CH_ADD | \$5C5D | 2 | IY+\$23 | Address of the next character to be interpreted - the character after the argument of PEEK, or the NEWLINE at the end of a POKE statement. |
| X_PTR | \$5C5F | 2 | IY+\$25 | Address of the character after the '?' marker. |
| WORKSP | \$5C61 | 2 | IY+\$27 | Address of temporary work space. |
| STKBOT | \$5C63 | 2 | IY+\$29 | Address of bottom of calculator stack. |
| STKEND | \$5C65 | 2 | IY+\$2B | Address of start of spare space. |
| BREG | \$5C67 | 1 | IY+\$2D | Calculator's B register. |
| MEM | \$5C68 | 2 | IY+\$2E | Address of area used for calculator's memory (usually MEMBOT, but not always). |
| FLAGS2 | \$5C6A | 1 | IY+\$30 | Flags: Bit 0 : 1=Screen requires clearing. Bit 1 : 1=Printer buffer contains data. Bit 2 : 1=In quotes. Bit 3 : 1=CAPS LOCK on. Bit 4 : 1=Using channel 'K'. Bit 5-7: Not used (always 0). |
| DF_SZ | \$5C6B | 1 | IY+\$31 | The number of lines (including one blank line) in the lower part of the screen. |
| S_TOP | \$5C6C | 2 | IY+\$32 | The number of the top program line in automatic listings. |
| OLDPPC | \$5C6E | 2 | IY+\$34 | Line number to which CONTINUE jumps. |
| OSPPC | \$5C70 | 1 | IY+\$36 | Number within line of statement to which CONTINUE jumps. |
| FLAGX | \$5C71 | 1 | IY+\$37 | Flags: Bit 0 : 1=Simple string complete so delete old copy. Bit 1 : 1=Indicates new variable, 0=Variable exists. Bit 2-4: Not used (always 0). Bit 5 : 1=INPUT mode. Bit 6 : 1=Numeric variable, 0=String variable. Holds nature of existing variable. Bit 7 : 1=Using INPUT LINE. |
| STRLEN | \$5C72 | 2 | IY+\$38 | Length of string type destination in assignment. |
| T_ADDR | \$5C74 | 2 | IY+\$3A | Address of next item in syntax table. |
| SEED | \$5C76 | 2 | IY+\$3C | The seed for RND. Set by RANDOMIZE. |
| FRAMES | \$5C78 | 3 | IY+\$3E | 3 byte (least significant byte first), frame counter incremented every 20ms. |
| UDG | \$5C7B | 2 | IY+\$41 | Address of first user-defined graphic. Can be changed to save space by having fewer user-defined characters. |
| COORDS | \$5C7D | 1 | IY+\$43 | X-coordinate of last point plotted. |
| | \$5C7E | 1 | IY+\$44 | Y-coordinate of last point plotted. |
| P_POSN | \$5C7F | 1 | IY+\$45 | 33-column number of printer position. |
| PR_CC | \$5C80 | 2 | IY+\$46 | Full address of next position for LPRINT to print at (in ZX Printer buffer). Legal values \$5B00 - \$5B1F. [Not used in 128K mode] |
| ECHO_E | \$5C82 | 2 | IY+\$48 | 33-column number and 24-line number (in lower half) of end of input buffer. |
| DF_CC | \$5C84 | 2 | IY+\$4A | Address in display file of PRINT position. |
| DF_CCL | \$5C86 | 2 | IY+\$4C | Like DF CC for lower part of screen. |
| S_POSN | \$5C88 | 1 | IY+\$4E | 33-column number for PRINT position. |
| | \$5C89 | 1 | IY+\$4F | 24-line number for PRINT position. |
| SPOSNL | \$5C8A | 2 | IY+\$50 | Like S_POSN for lower part. |
| SCR_CT | \$5C8C | 1 | IY+\$52 | Counts scrolls - it is always 1 more than the number of scrolls that will be done before stopping with 'scroll?'. |
| ATTR_P | \$5C8D | 1 | IY+\$53 | Permanent current colours, etc, as set up by colour statements. |
| MASK_P | \$5C8E | 1 | IY+\$54 | Used for transparent colours, etc. Any bit that is 1 shows that the corresponding attribute bit is taken not from ATTR_P, but from what is already on the screen. |
| ATTR_T | \$5C8F | 1 | IY+\$55 | Temporary current colours (as set up by colour items). |
| MASK_T | \$5C90 | 1 | IY+\$56 | Like MASK_P, but temporary. |
| P_FLAG | \$5C91 | 1 | IY+\$57 | Flags: Bit 0: 1=OVER 1, 0=OVER 0. Bit 1: Not used (always 0). Bit 2: 1=INVERSE 1, 0=INVERSE 0. Bit 3: Not used (always 0). Bit 4: 1=Using INK 9. Bit 5: Not used (always 0). |

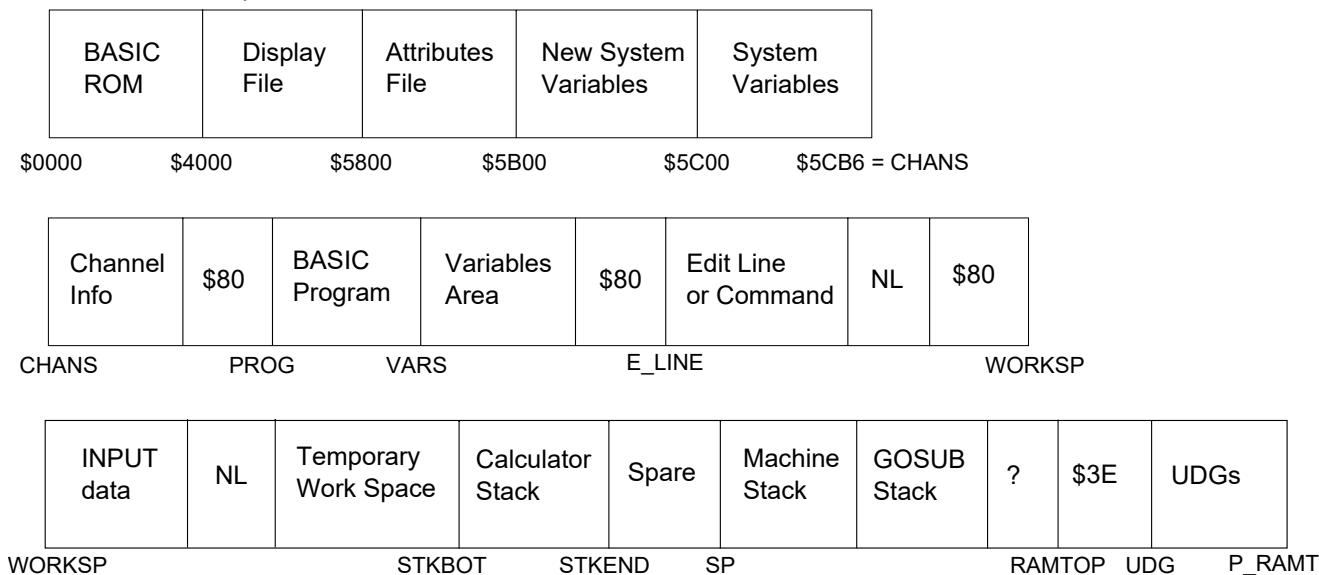

Bit 6: 1=Using PAPER 9.

Bit 7: Not used (always 0).

| | | | | |
|--------|--------|----|---------|---|
| MEMBOT | \$5C92 | 30 | IY+\$58 | Calculator's memory area - used to store numbers that cannot conveniently be put on the calculator stack. |
| | \$5CB0 | 2 | IY+\$76 | Not used on standard Spectrum. [Used by ZX Interface 1 Edition 2 for printer WIDTH] |
| RAMTOP | \$5CB2 | 2 | IY+\$78 | Address of last byte of BASIC system area. |
| P_RAMT | \$5CB4 | 2 | IY+\$7A | Address of last byte of physical RAM. |

Memory Map

The conventional memory is used as follows:

I Register

The I register is used along with the R register by the Z80 for automatic memory refreshing. Setting the I register to a value between \$40 and \$7F causes memory refreshes to occur to the lower 16K RAM. This RAM is contended with the ULA which uses it for the generation of the video display.

The memory refreshes get interpreted by the ULA as the CPU requesting to access the lower 16K RAM bank very rapidly and very often. The ULA is not able to handle reads at such a high frequency, with the consequence that it fails to fetch and output the next screen byte. Instead it re-uses the byte previously read. This causes a visible corruption to the video display output, often referred to a 'snow', although no actual corruption occurs to the video display RAM. This also happens when the I register is set to a value between \$C0 and \$FF when a contended RAM bank is paged in and, unlike the Spectrum 16K/48K, can lead to a machine crash.

Screen File Formats

The two screens available on the Spectrum +2, the normal screen in RAM bank 5 (\$4000-\$5AFF) and the shadow screen in RAM bank 7 (\$C000-\$FFFF), both use the same file format.

Display File

The display file consists of 3 areas, each consisting of 8 characters rows, with each row consisting of 8 pixel lines.

Each pixel line consists of 32 cell columns, with each cell consisting of a byte that represents 8 pixels.

The address of a particular cell is formed as follows:

| | | | | | | | | | | | | | | | | |
|------|----|----|----|----|----|----|---|---|---|---|---|---|---|---|---|---|
| | s | 1 | 0 | a | a | l | l | l | r | r | r | c | c | c | c | c |
| Bit: | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

where: s = Screen (0-1: 0=Normal screen, 1=Shadow Screen)

aa = Area (0-2)

rrr = Row (0-7)

lll = Line (0-7)

cccc = Column (0-31)

An area value of 3 denotes the attributes file, which consists of a different format.

Attributes File

The attributes file consists of 24 characters rows, with each row consisting of 32 cell columns.

Each cell consisting of a byte that holds the colour information.

The address of a particular cell is formed as follows:

| | | | | | | | | | | | | | | | |
|---------|----|----|----|----|----|---|---|---|---|---|---|---|---|---|---|
| s | 1 | 0 | 1 | 1 | 0 | r | r | r | r | r | c | c | c | c | c |
| Bit: 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

where: s = Screen (0-1: 0=Normal screen, 1=Shadow Screen)

rrrrr = Row (0-23)

ccccc = Column (0-31)

Each cell holds a byte of colour information:

| | | | | | | | |
|--------|---|---|---|---|---|---|---|
| f | b | p | p | p | i | i | i |
| Bit: 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

where: f = Flash (0-1: 0=Off, 1=On)

b = Bright (0-1: 0=Off, 1=On)

ppp = Paper (0-7: 0=Black, 1=Blue, 2=Red, 3=Magenta, 4=Green, 5=Cyan, 6=Yellow, 7=White)

iii = Ink (0-7: 0=Black, 1=Blue, 2=Red, 3=Magenta, 4=Green, 5=Cyan, 6=Yellow, 7=White)

Address Conversion Between Display File and Attributes File

The address of the attribute cell corresponding to an address in the display file can be constructed by moving bits 11 to 12 (the area value) to bit positions 8 to 9, setting bit 10 to 0 and setting bits 11 to 12 to 1.

The address of the display file character cell corresponding to an address in the attributes file can be constructed by moving bits 8 to 9 (the row value) to bit positions 11 to 12, and then setting bits 8 to 9 to 0.

Standard I/O Ports

Port \$FE

This controls the cassette interface, the speaker, the border colour and is used to read the keyboard.

Since it is the ULA that controls these facilities, it will introduce a delay when accessing the port if it is busy at the time, and hence I/O port \$FE is subject to contention.

OUTPUT:

Bit 0-2: Border colour (0=Black, 1=Blue, 2=Red, 3=Magenta, 4=Green, 5=Cyan, 6=Yellow, 7=White).

Bit 3 : MIC output (1=Off, 0=On).

Bit 4 : Speaker output (1=On, 0=Off).

Bit 5-7: Not used.

INPUT:

Upper byte selects keyboard row to read.

| | Bit0 | Bit1 | Bit2 | Bit3 | Bit4 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 | |
|--------|-------|------|------|------|------|------|------|------|------|-------|--------|
| \$F7FE | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 0 | \$EFFE |
| \$FBFE | Q | W | E | R | T | Y | U | I | O | P | \$DFFE |
| \$FDFE | A | S | D | F | G | H | J | K | L | ENTER | \$BFFE |
| \$FEFE | SHIFT | Z | X | C | V | B | N | M | SYM | SPACE | \$7FFE |

Bit 0-4 : Key states (corresponding bit is 0 if the key is pressed).

Bit 5 : Not used (always 1).

Bit 6 : EAR input.

Bit 7 : Not used (always 1).

Cassette Header Format

A file consists of a header block followed by a data block. Each block begins with a flag that indicates whether it is a header block or a data block. Next are the header or data bytes, and finally a checksum of the flag and header/data bytes.

Flag - A value of \$00 for a header and \$FF for a data block.

Bytes - The bytes forming the header information or the file data.

Checksum - An XOR checksum of the Flag and Bytes fields.

The header information consists of 17 bytes and these describe the size and type of data that the data block contains.

The header bytes have the following meaning:

Byte \$00 : File type - \$00=Program, \$01=Numeric array, \$02=Character array, \$03=Code/Screen\$.

Bytes \$01-\$0A: File name, padding with trailing spaces.

Bytes \$0B-\$0C: Length of program/code block/screen\$/array (\$1B00 for screen\$).
 Bytes \$0D-\$0E: For a program, it holds the auto-run line number (\$80 in byte \$0E if no auto-run).
 For code block/screen\$ it holds the start address (\$4000 for screen\$).
 For an array, it holds the variable name in byte \$0E.
 Bytes \$0F-\$10: Offset to the variables (i.e. length of program) if a program.

AY-3-8912 Programmable Sound Generator Registers

This is controlled through output I/O port \$FFFD. It is driven from a 1.77345 MHz clock.
 The datasheet for the AY-3-8912 lists to the registers in octal, but below they are listed in decimal.

Registers 0 and 1 (Channel A Tone Generator)

Forms a 12 bit pitch control for sound channel A. The basic unit of tone is the clock frequency divided by 16, i.e. 110.841 kHz. With a 12 bit counter range, 4095 different frequencies from 27.067 Hz to 110.841 kHz (in increments of 27.067 Hz) can be generated.

Bits 0-7 : Contents of register 0.
 Bits 8-11 : Contents of lower nibble of register 1.
 Bits 12-15: Not used.

Registers 2 and 3 (Channel B Tone Generator)

Forms a 12 bit pitch control for sound channel B.

Bits 0-7 : Contents of register 2.
 Bits 8-11 : Contents of lower nibble of register 3.
 Bits 12-15: Not used.

Registers 4 and 5 (Channel C Tone Generator)

Forms a 12 bit pitch control for sound channel C.

Bits 0-7 : Contents of register 4.
 Bits 8-11 : Contents of lower nibble of register 5.
 Bits 12-15: Not used.

Register 6 (Noise Generator)

The frequency of the noise is obtained in the PSG by first counting down the input clock by 16 (i.e. 110.841 kHz), then by further counting down the result by the programmed 5 bit noise period value held in bits 0-4 of register 6. With a 5 bit counter range, 31 different frequencies from 3.576 kHz to 110.841 kHz (in increments of 3.576 kHz) can be generated.

Register 7 (Mixer — I/O Enable)

This controls the enable status of the noise and tone mixers for the three channels, and also controls the I/O port used to drive the RS232 and Keypad sockets.

Bit 0: Channel A Tone Enable (0=enabled).
 Bit 1: Channel B Tone Enable (0=enabled).
 Bit 2: Channel C Tone Enable (0=enabled).
 Bit 3: Channel A Noise Enable (0=enabled).
 Bit 4: Channel B Noise Enable (0=enabled).
 Bit 5: Channel C Noise Enable (0=enabled).
 Bit 6: I/O Port Enable (0=input, 1=output).
 Bit 7: Not used.

Register 8 (Channel A Volume)

This controls the volume of channel A.

Bits 0-4: Channel A volume level.
 Bit 5 : 1=Use envelope defined by register 13 and ignore the volume setting.
 Bits 6-7: Not used.

Register 9 (Channel B Volume)

This controls the volume of channel B.

Bits 0-4: Channel B volume level.
 Bit 5 : 1=Use envelope defined by register 13 and ignore the volume setting.
 Bits 6-7: Not used.

Register 10 (Channel C Volume)

This controls the volume of channel C.

Bits 0-4: Channel C volume level.

Bit 5 : 1=Use envelope defined by register 13 and ignore the volume setting.

Bits 6-7: Not used.

Register 11 and 12 (Envelope Period)

These registers allow the frequency of the envelope to be selected.

The frequency of the envelope is obtained in the PSG by first counting down the input clock by 256 (6.927 kHz), then further counting down the result by the programmed 16 bit envelope period value. With a 16 bit counter range, 65535 different frequencies from 1.691 Hz to 110.841 kHz (in increments of 1.691 Hz) can be generated.

Bits 0-7 : Contents of register 11.

Bits 8-15: Contents of register 12.

Register 13 (Envelope Shape)

This register allows the shape of the envelope to be selected.

The envelope generator further counts down the envelope frequency by 16, producing a 16-state per cycle envelope pattern. The particular shape and cycle pattern of any desired envelope is accomplished by controlling the count pattern of the 4 bit counter and by defining a single cycle or repeat cycle pattern.

Bit 0 : Hold.

Bit 1 : Alternate.

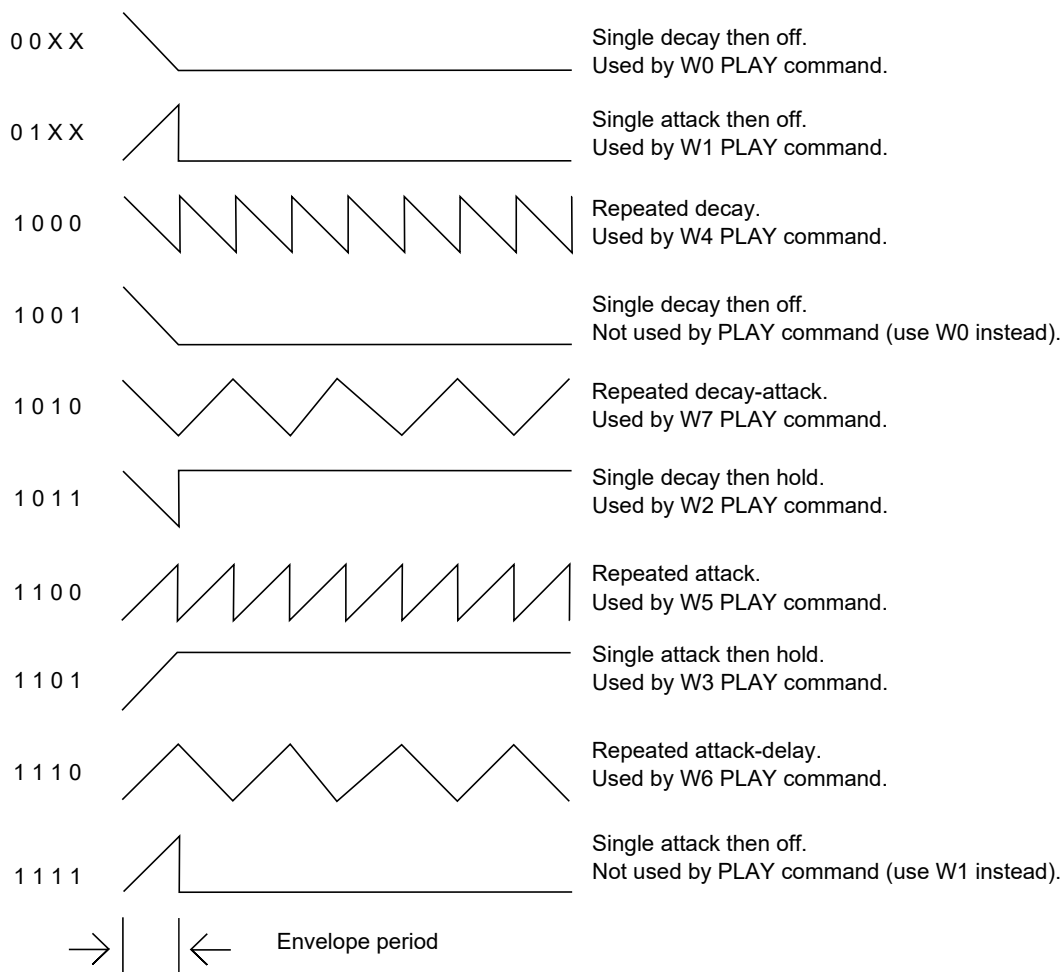

Bit 2 : Attack.

Bit 3 : Continue.

Bits 4-7: Not used.

These control bits can produce the following envelope waveforms:

Bit: 3 2 1 0

Register 14 (I/O Port)

This controls the RS232 and Keypad sockets.

Once the register has been selected, it can be read via port \$FFFD and written via port \$BFFD.

Bit 0: KEYPAD CTS (out) - 0=Spectrum ready to receive, 1=Busy

Bit 1: KEYPAD RXD (out) - 0=Transmit high bit, 1=Transmit low bit

Bit 2: RS232 CTS (out) - 0=Spectrum ready to receive, 1=Busy

Bit 3: RS232 RXD (out) - 0=Transmit high bit, 1=Transmit low bit

Bit 4: KEYPAD DTR (in) - 0=Keypad ready for data, 1=Busy

Bit 5: KEYPAD TXD (in) - 0=Receive high bit, 1=Receive low bit

Bit 6: RS232 DTR (in) - 0=Device ready for data, 1=Busy

Bit 7: RS232 TXD (in) - 0=Receive high bit, 1=Receive low bit

The RS232 port also doubles up as a MIDI port, with communications to MIDI devices occurring at 31250 baud.

Commands and data can be sent to MIDI devices. Command bytes have the most significant bit set, whereas data bytes have it reset.

Socket Pin Outs

RS232/MIDI Socket

The RS232/MIDI socket is controlled by register 14 of the AY-3-8912 sound generator.

| Pin | Signal |
|-----|-------------------|
| 1 | 0V |
| 2 | TXD - In (Bit 7) |
| 3 | RXD - Out (Bit 3) |
| 4 | DTR - In (Bit 6) |
| 5 | CTS - Out (Bit 2) |
| 6 | 12V |

Keypad Socket

The keypad socket is controlled by register 14 of the AY-3-8912 sound generator.

Only bits 0 and 5 are used for communications with the keypad (pins 2 and 5).

Writing a 1 to bit 0 (pin 2) will eventually force the keypad to reset.

Summary information about the keypad and its communications protocol can be found in the Spectrum 128 Service Manual and a detailed description can be found at www.fruitcake.plus.com.

| Pin | Signal |
|-----|-------------------|
| 1 | 0V |
| 2 | OUT - Out (Bit 0) |
| 3 | n/u - In (Bit 4) |
| 4 | n/u - Out (Bit 1) |
| 5 | IN - In (Bit 5) |
| 6 | 12V |

n/u = Not used for keypad communications.

The keypad socket was later used by Amstrad to support a lightgun. There are no routines within the ROMs to handle communication with the lightgun so each game has to implement its own control software. Only bits 4 and 5 are used for communication with the lightgun (pins 3 and 5).

The connections to the lightgun are as follows:

| Pin | Signal |
|-----|----------------------|
| 1 | 0V |
| 2 | n/u - Out (Bit 0) |
| 3 | SENSOR - In (Bit 4) |
| 4 | n/u - Out (Bit 1) |
| 5 | TRIGGER - In (Bit 5) |
| 6 | 12V |

n/u = Not used for lightgun communication.

Monitor Socket

| Pin | Signal | Level |
|-----|----------------|----------------------|
| 1 | Composite PAL | 1.2V pk-pk (75 Ohms) |
| 2 | 0 Volts | 0V |
| 3 | Bright Output | TTL |
| 4 | Composite Sync | TTL |
| 5 | Vertical Sync | TTL |
| 6 | Green | TTL |
| 7 | Red | TTL |
| 8 | Blue | TTL |

A detailed description of the monitor socket and circuitry, and how to construct a suitable RGB SCART cable can be found at www.fruitcake.plus.com.

Edge Connector

| Pin | Side A | Side B |
|-----|--------|-------------------------------|
| 1 | A15 | A14 |
| 2 | A13 | A12 |
| 3 | D7 | +5V |
| 4 | n/u | +9V |
| 5 | Slot | Slot |
| 6 | D0 | 0V |
| 7 | D1 | 0V |
| 8 | D2 | /CLK |
| 9 | D6 | A0 |
| 10 | D5 | A1 |
| 11 | D3 | A2 |
| 12 | D4 | A3 |
| 13 | /INT | /IORQULA |
| 14 | /NMI | 0V |
| 15 | /HALT | n/u (On 48K Spectrum = VIDEO) |
| 16 | /MREQ | n/u (On 48K Spectrum = /Y) |
| 17 | /IORQ | n/u (On 48K Spectrum = V) |
| 18 | /RD | n/u (On 48K Spectrum = U) |
| 19 | /WR | /BUSREQ |
| 20 | -5V | /RESET |
| 21 | /WAIT | A7 |
| 22 | +12V | A6 |
| 23 | -12V | A5 |
| 24 | /M1 | A4 |
| 25 | /RFSH | /ROMCS |
| 26 | A8 | /BUSACK |
| 27 | A10 | A9 |
| 28 | n/u | A11 |

Side A=Component Side, Side B=Underside.

n/u = Not used.

Sound Socket

ROM 0 Differences Between Models

The Spectrum +2 contains all of the functionality of the Spectrum 128 but excludes all routines relating to the Tape Tester option. Aside from this, the only other changes are to the copyright message and the message displayed when the Tape Loader option is invoked. All of the bugs that exist in the Spectrum 128 ROM 0 are still present in the Spectrum +2. English, Spanish and French versions of the Spectrum +2 were produced and these differed only in the language of the menu and error messages. However, a consequence of these translations was that the location of various routines were shifted.

The following shows a comparison of ROM 0 for the range of Spectrum +2 models and the Spectrum 128, and details how the address ranges correspond between them.

| Spectrum 128 | Spectrum +2 | French +2 | Spanish +2 |
|---------------|---------------|---------------|---------------|
| \$0000-\$0565 | \$0000-\$0565 | \$0000-\$0565 | \$0000-\$0565 |
| \$0566-\$057C | \$0566-\$059B | \$0566-\$059B | \$0566-\$059B |
